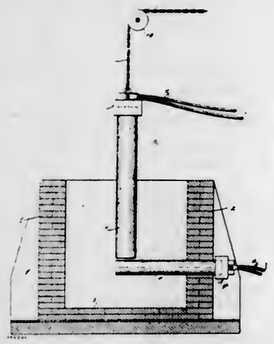
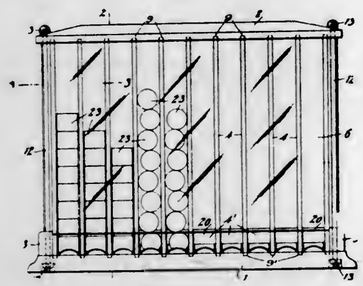
A toy having a resonant supporting member and an object in representation of a woodpecker attached thereto and consisting of a hollow body member and a pivotal head member having a beak in contacting relation with the supporting member and means housed in and concealed by the body member and consisting of an escapement lever connected with said head member, an escapement wheel in operative relation with the escapement lever, a driving gear connected with the escapement wheel, and an actuating spring connected with the driving gear, for imparting oscillatory movement to the head member.



1,379,522. AIRCRAFT. GARLAND DEAN BRUNER, Urbana, Mo. Filed Dec. 6, 1920. Serial No. 428,803. 3 Claims. (Cl. 244—19.)

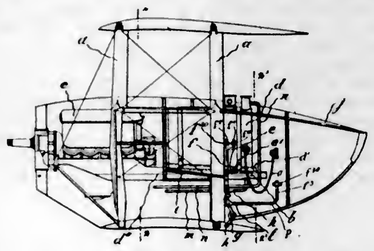
1. A device of the class described, comprising a framework including lower approximately horizontal elements and upwardly inclined elements extending toward each other, a propeller, a shaft therefor, and means for mounting the latter in the upper portion of the frame, permitting rotation of the propeller, means for driving the propeller, said means including a universal joint, said means for mounting the propeller shaft comprising an annular horizontal element supported by the framework, a tiltable element including trunnions supported by the annular



element, means coöperating with the tiltable element providing a bearing for the propeller shaft, and a lever for rocking the tiltable element.

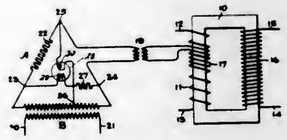
1,379,523. PROCESS OF REDUCING ALUMINUM OXID. LOUIS BURGESS, New York, N. Y., assignor to Standard Oil Company, a Corporation of New Jersey. Filed Aug. 15, 1919. Serial No. 317,687. 14 Claims. (Cl. 204—63.)

3. The process of reducing aluminum oxid which consists in mixing aluminum oxid bearing material in a divided condition with coke-producing material coking the mass, and then subjecting the mass to an electric arc inclosed by said mass.



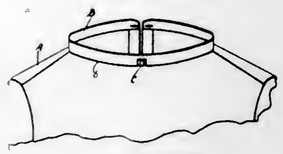
1,379,524. DISPENSING-CABINET. WILLIAM E. CASSEL, Fort Scott, Kans. Filed Aug. 27, 1920. Serial No. 406,286. 3 Claims. (Cl. 211—8.)

1. A dispensing cabinet of the character described, comprising a base, a top, said base and top having registering transverse grooves, vertical partitions having their ends in said grooves, front and rear plates between the top and the bottom, said front plate having its lower edge spaced from the upper face of the bottom, slides in the lower portion of each compartment formed by the partitions, vertical rods projected through the ends of the top and bottom, and devices adjustable on the rods for clamping the partitions between the top and the bottom.



1,379,525. DETACHABLE FUEL-TANK. RENÉ CAUDRON, Issy les Moulineaux, France. Filed Aug. 9, 1918. Serial No. 249,216. 5 Claims. (Cl. 244—1.)

1. In an airplane the combination of a tank supporting frame, a number of fuel tanks mounted in said frame, rearwardly slanting slide-ways for said frame, and releaseable means for normally holding the fuel tanks in

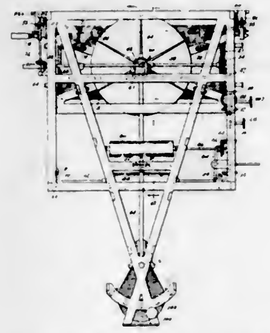


position and capable of permitting the fuel tanks to escape rearwardly down the slide-ways during the flight of the airplane.

1,379,526. TEMPERATURE-INDICATOR FOR TRANSFORMERS AND THE LIKE. ALBERT T. CHILDS, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed May 25, 1918. Serial No. 236,661. 4 Claims. (Cl. 73—32.)

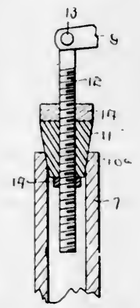
1. A temperature indicator for transformers comprising a bridge having an arm composed of a single non-inductive resistance member which has a substantial temperature coefficient of resistance and is adapted to be arranged in close thermal relation with a winding of the transformer, and means associated with said bridge responsive to the E. M. F. consumed by the resistance of said member for indicating the temperature variations in said member.

1,379,527. NECKBAND-FASTENING MEANS FOR COLLARS. ARTHUR J. CHOQUET, New York, N. Y., assignor, by mesne assignments, to Adolph M. Deutsch, county of Queens, N. Y. Filed Jan. 10, 1920. Serial No. 350,518. 2 Claims. (Cl. 2—69.)



1. A device of the class described, comprising, in combination with a shirt band, of a metal plate secured in said band at the back thereof, said plate being bent to conform to the curvature of the band, and a raised, downturned hook-like element formed with said plate extending outwardly at the center of said band, adapted to engage in the rear buttonhole of a collar.

1,379,528. PROFILE-MAP MACHINE. EDWIN S. CLARK, Walla Walla, Wash. Filed Feb. 15, 1919. Serial No. 277,149. 15 Claims. (Cl. 234—8.)

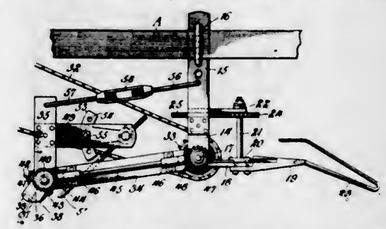


1. In a profile delineating device for use on a traveling vehicle, a drive shaft; means for driving said drive shaft at a speed corresponding to the horizontal traverse of the vehicle; record-strip supporting means; selective-speed

gearing driven by the drive shaft and coöperating with the record-strip supporting means for feeding a record strip at any one of a plurality of speeds to vary the scale of the profile; a profile tracer mounted to engage and

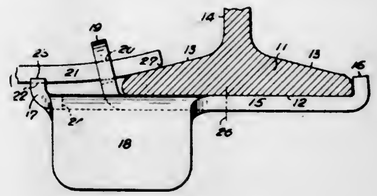
traverse the record strip; and driving means driven by the drive shaft to move said tracer transversely of the record strip at a speed corresponding to the grade over which the vehicle is traveling.

1,379,529. FLOAT-VALVE. WILLIAM COMBELLICK, Gettysburg, S. D. Filed June 21, 1919. Serial No. 305,820. 1 Claim. (Cl. 137—104.)



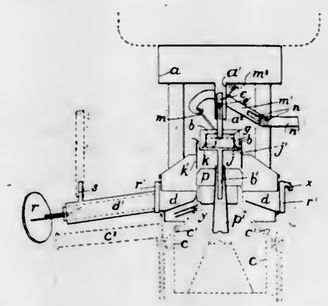
The combination with a fluid containing tank inlet pipe having a valve seat on its inner end; of a frusto-conical valve having a threaded bore extending longitudinally therethrough, a threaded stem extended through and adjustably mounted in said bore and projecting beyond the valve at one end a sufficient distance so as to be guided by the wall of the pipe and at its other end to form a connection, an arm pivoted at one end to said projecting stem and carrying a float at its other end and a bracket carried by said pipe with one end extended above said pipe in a plane spaced laterally from that occupied by the pipe and on which said arm is fulcrumed intermediate its ends.

1,379,530. BEET-TOPPING ATTACHMENT FOR BEET-HARVESTING MACHINES. OLIVER P. COMBEST, Pomona, Calif. Filed Jan. 4, 1918. Serial No. 210,297. 17 Claims. (Cl. 55—107.)



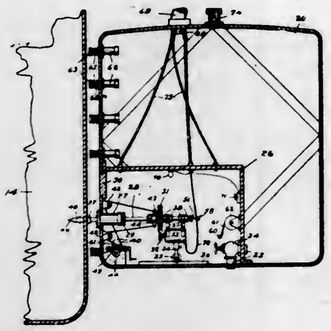
1. The combination with a supporting frame, of an auxiliary frame pivotally connected with said supporting frame and having parallel motion, and beet topping mechanism carried by the rear end of said auxiliary frame, said mechanism consisting of a ground knife and a rotary cutter coöperating therewith, the ground knife having a front cutting edge with its lower face in rear thereof shaped so as to ride along the ground.

9. The combination with vertically movable beet topping mechanism, a gage operated to automatically adjust said mechanism relatve to the beet so as to regulate the height of the cut of said mechanism, said gage comprising a



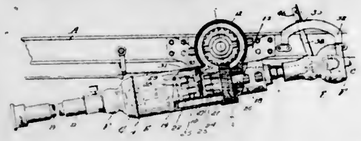
plurality of spaced fingers arranged in advance of said beet topping mechanism, and means for adjusting said fingers in the arc of a circle toward and away from said beet topping mechanism.

1,379,531. RAIL-ANCHOR. FRANCIS W. COOPER and HENRY STEADWORTHY, Montreal, Quebec, Canada. Filed Dec. 19, 1919. Serial No. 346,100. 10 Claims. (Cl. 238—304.)



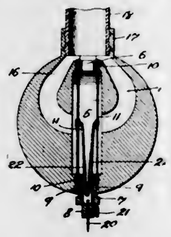
1. A device of the class described comprising a body adapted to engage the under surface of a rail base, a fulcrum member carried by the body adjacent the rail edge, a key seat carried by the body above the plane thereof, and a key passing through said fulcrum and adapted to be supported at one end on the upper surface of the rail base and at the opposite end on the key seat.

1,379,532. CREAM-SEPARATOR. WILLIAM GORDON COOTE, East Katanning, Western Australia, Australia. Filed Jan. 7, 1920. Serial No. 350,053. 1 Claim. (Cl. 233—11.)



In cream separators, the combination with the cream chamber and an outlet spout connected thereto, of means for cooling said chamber and spout consisting of an outer jacketed wall surrounding said chamber and spout, an inlet pipe for connecting a high level water source to said jacket, and an outlet pipe connected to the jacket, whereby a constant flow of cooling water about the cream chamber and spout is maintained.

1,379,533. APPARATUS FOR SALVAGING SUNKEN SHIPS. EARL W. COX, Seattle, Wash. Filed May 15, 1920. Serial No. 381,769. 2 Claims. (Cl. 114—53.)

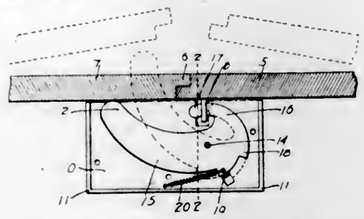


1. In a ship salvaging device, buoyant tanks, means for securing said buoyant tanks to the side of the sunken ship and resilient devices on the side of each of said buoyant tanks for engaging with the sides of said ship at a plurality of points.

1,379,534. POWER-TRANSMISSION DEVICE. RALPH F. CRAWFORD, Salina, Kans. Filed June 9, 1920. Serial No. 387,576. 6 Claims. (Cl. 74—7.)

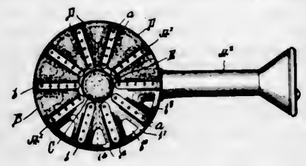
1. A power take-off attachment for motor vehicles comprising a shaft interposed in the drive shaft of the vehicle and constantly driven by the motor, a shaft journaled transversely of the vehicle frame and carrying a power transmitting device, a gear on said last named shaft, a gear rotatably mounted on said first named shaft, a clutch mechanism splined upon said first named shaft and operable whereby to lock said second named shaft for rotation with said first named shaft or to connect said first named shaft direct with the portion of the drive shaft leading to the propelling mechanism, and means for simultaneously shifting said clutch mechanism to cause rotation of said second named gear and to set the brakes of the vehicle.

1,379,535. PHONOGRAPH-REPRODUCER. CHARLEY M. CROSSNO, Sallisaw, Okla. Filed June 24, 1919. Serial No. 306,378. 1 Claim. (Cl. 274—35.)



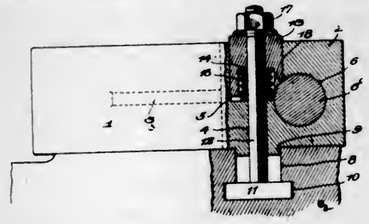
A reproducer including a body, opposed diaphragms engaged therewith, a stylus, means connecting the stylus with the diaphragms, said body having a sound outlet communicating with the chamber between the diaphragms, and hollow extensions carried by the body having communication with the space lying exteriorly of the diaphragms and communicating with the sound outlet of the body.

1,379,536. WRENCH. JOHN WM. DAVIES, Barnesboro, Pa. Filed May 25, 1920. Serial No. 384,088. 2 Claims. (Cl. 81—157.)



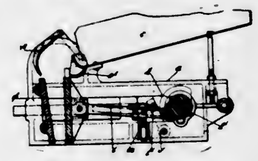
1. In a wrench of the class described, the combination with a shank, of a head provided with an integral jaw and with a central opening carried by said shank, a movable jaw provided with an integral neck carried by said head, said neck provided with teeth on one edge and extending across the central opening of the head, a casing provided with bifurcated ends straddling the neck, said casing provided with depending flanges contiguous to the sides of the head, a spring on the head and pressing against the casing, and an adjusting screw journaled upon the casing and normally meshing with the teeth of the neck.

1,379,537. LATCH. FRANK E. DAVIS, Bremerton, Wash. Filed Oct. 11, 1919. Serial No. 329,916. 1 Claim. (Cl. 292—129.)



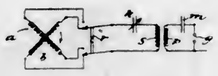
In combination with two swinging doors of a cupboard or the like which are latched closed in the ordinary manner, and one of said doors having an inwardly projecting staple, of a lock for said doors, comprising a pivotally supported member having one of its ends formed with a finger to be received in the staple, its other end extended to provide a tail designed to be contacted by the second door, a shoulder on the lock, a stop in the path of contact with the shoulder for limiting the swinging of the lock in one direction, and a spring influencing the lock whereby to cause the swinging thereof to normally project the tail beyond the door casing to bring the finger of the lock out of staple engaging position, and said lock when the tail thereof is contacted by one of the doors and is swung to bring its finger into the staple of the other door being influenced by its spring to cause the tail portion thereof to exert a constant pressure against the door with which it engages and to impel the door to open position when the latching means for the doors is released.

1,379,538. BURNER FOR GASEOUS FUEL. DWIGHT MORRIS DE SILVA, Washington, D. C. Filed Nov. 24, 1920. Serial No. 426,238. 12 Claims. (Cl. 158—99.)



1. Apparatus of the character described, comprising in combination a gas burner provided with a series of radial perforated arms, and means for supplying a mixture of air and gas to said burner, and a spider mounted above said burner and provided with an annular socket in its center, and a series of radial slots registering with the perforated arms of the burner, said slots separating the said spider into a series of sector-shaped segments, with blocks of porous, heat resistant material mounted above said annular socket and above said sector-shaped segments, with air passages between said blocks, substantially as described.

1,379,539. TOOL-HOLDER. JOHN J. DOLAN, Sr., Duquesne, Pa. Filed Sept. 15, 1919. Serial No. 323,819. 1 Claim. (Cl. 82—36.)

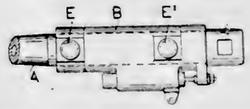


In a device of the kind described, a lathe rest having a recess and a groove communicating with the recess, the groove being of greater width than the recess, a tool holder having a longitudinal rib adapted to enter the recess of the lathe rest, said holder having a tool receiving bore and having communicating bores at right angles thereto, a plate slidably fitting in the groove of the rest, studs carried by said plate and entering the last mentionel bores, respectively, bushings fitting on said studs and having their inner ends recessed, nuts working on the outer ends of the studs, and coiled springs encircling the studs and resting in the recessed ends of the bushings, the bushings being cut away on one side on an arc equal to that of the tool receiving bore.

1,379,540. NUT-CRACKING MACHINE. JULIUS OSCAR DREWS, London, England. Filed July 7, 1919. Serial No. 309,044. 2 Claims. (Cl. 146—3.)

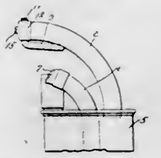
1. A nut cracking machine, comprising a frame, an inclined feed chute, a fixed jaw, a sliding jaw, a plurality of pivoted deflectors mounted between the chute and the jaws for receiving nuts from the chute and delivering them between the jaws, and means carried by said sliding jaw for operating said deflectors.

1,379,541. ELECTROMAGNETIC-WAVE NAVIGATIONAL ARRANGEMENT. JAMES ERSKINE-MURRAY and JAMES ROBINSON, Biggin Hill, England. Filed Oct. 29, 1919. Serial No. 334,136. 5 Claims. (Cl. 250—11.)



1. The method of determining the bearing of a wireless transmitting station which consists in determining the interval between the reception of a distinctive signal periodically propagated from the transmitting station in a definite direction and the reception of a pair of successive signals of equal intensity in a series of signals propagated from the transmitting station in pairs of quickly succeeding individual signals at small equal time intervals, the individual signals of each pair varying in relative intensity in a given direction with the position of a movable element which controls the emission of signals at the transmitting station.

1,379,542. METAL-COATING COMPOSITION. THOMAS JEFFERSON ETHRIDGE, Longview, Tex. Filed May 24, 1920. Serial No. 383,933. 5 Claims. (Cl. 134—51.)

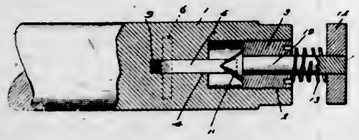


3. A painting composition comprising asphalt, graphite and crude oil.

1,379,543. BARREL-RECOIL GUN. FRITZ FINCKH, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Sept. 4, 1920. Serial No. 408,376. 5 Claims. (Cl. 89—37.)

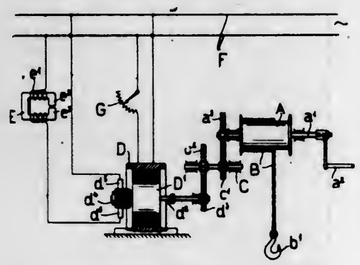
1. A barrel recoil gun which comprises a gun barrel, a cradle, and means on said cradle whereby the horizontal axis about which the gun barrel oscillates can be brought to distances of different length from the breech end of the cradle.

1,379,544. CLEAN-OUT FOR BURNERS. EMANUEL FOLGMAN, Brooklyn, N. Y. Filed Jan. 26, 1920. Serial No. 354,098. 4 Claims. (Cl. 158—72.)



3. In a self-blowing torch, a plurality of retort tubes, plug members supported in the ends of said retort tubes, a burner tube having a passage therein, said plug members being provided with a plurality of right angular passages arranged within said plug members and adapted to establish communication between the retort tubes and the burner tube, one of the passages of the plug members being arranged in alinement with the passage through the burner tube, and means for closing a portion of each of said passages.

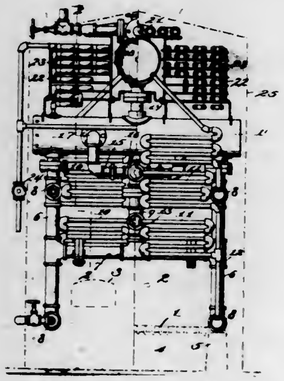
1,379,545. INSIDE PIPE-CUTTER. TROY J. FONDA, Oconto, Nebr. Filed July 23, 1920. Serial No. 398,420. 1 Claim. (Cl. 81—195.)



A device of the class described comprising a body having a screw threaded socket and slots in its sides com-

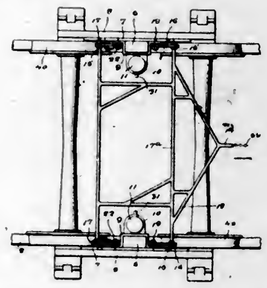
munication with said socket, cutters pivoted in said slots and having their cutting edges projecting outwardly, spring means for holding said cutters inwardly with the edges within the slot, a bushing in said socket, a spreader

bolt carried by the bushing and having its enlarged upper end adapted to engage the cutters for forcing their edges outwardly, a nut on the lower end of the bolt for engaging the obstruction and a spring for normally holding the bolt out of engagement with the cutter.



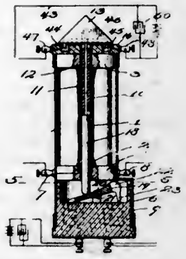
1,379,546. APPARATUS FOR RAISING OR LOWERING A LOAD. RUDOLF FÖRSTER, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Sept. 4, 1920. Serial No. 408,384. 4 Claims. (Cl. 172—152.)

1. In a hoisting mechanism, the combination of means for imparting the desired ascending and descending velocity, and means comprising an electro-motor for approximately compensating for the load at any speed.



2. Apparatus such as set forth in claim 1, in which the compensating motor is a shunt wound commutator motor, having an alternating current source of constant tension and frequency and the rotor circuit of which has, in comparison with its ohmic resistance, a high inductive resistance.

1,379,547. STEAM-BOILER. HORACE FURMAN, Petersburg, Va. Filed Nov. 24, 1919. Serial No. 340,233. 5 Claims. (Cl. 122—355.)

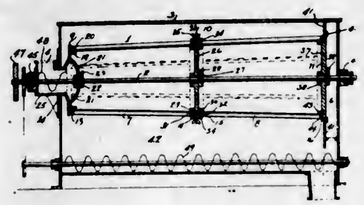


1. A steam boiler comprising downtake and uptake manifolds, water tube units connected to receive water from the downtake manifold and to discharge water into the uptake manifold, a drum connected at its bottom to the uptake manifold, a drum connected at its bottom to the top of the downtake manifold and connected at its side, at points in its length removed from its point of connection with the downtake manifold, to the uptake manifold, and a steam drum connected to the top of the drum first mentioned at a point between the points of connection of the first-mentioned drum with the uptake manifold.

1,379,548. FLUID-PRESSURE RAIL-BRAKE. PETER J. GAILLARD, Chicago, Ill. Filed July 25, 1919. Serial No. 313,167. 3 Claims. (Cl. 188—41.)

1. The combination in a rail brake, of a truck, vertically disposed longitudinal plates fixed to the ends of the truck, vertically movable shoes having shanks movable against said plates, strips straddling said shanks and fixed to said plates, vertically disposed cylinders fixed to the strips at the opposite sides of the shanks with reference to the plates, and pistons movable in said cylinders and connected to said shanks.

1,379,549. ELECTRIC RELAY. MANIOUS GARL, Akron, Ohio. Filed May 24, 1917. Serial No. 170,696. 9 Claims. (Cl. 200—112.)



5. In a relay having an armature movable in consequence of the energizing and deënergizing of the relay-winding, a vertically reciprocable indicator actuated by said armature, said indicator havin downwardly directed and projecting contacts, and a pair of mercury wells located in the line of movement of said contacts and into which said contacts are adapted to dip.

1,379,550. FLOUR-SIFTER. EUGENE GASE, Saginaw, Mich., assignor to Baker-Perkins Manufacturing Corporation, Saginaw, Mich. Filed Oct. 25, 1920. Serial No. 419,497. 2 Claims. (Cl. 83—39.)

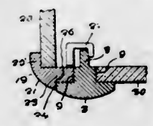
1. In a rotary flour sifter, in combination with removable sieves consisting of sifting cloth fixed to iron frames shaped to form a reel of truncated-pyramidal shape, of a driving shaft coaxial to the said reel, of three spider wheels fixed to the said shaft, one for each

end and one for the middle-portion of the said reel, of hexagonal brackets provided at the rims of the said spider wheels and so constructed and arranged as to support the said sieves for forming the said reel, of means provided in the rim of the said two end spider

wheels for keeping the outer ends of the said sieves, when pushed against the same, in position on the said brackets, and of means mounted on the rim of the said middle spider wheel for locking the said sieves securely in their position on the said brackets.

1,379,551. CRYPTOGRAPHY. HENRY C. GAUSS, Washington, D. C. Filed Sept. 17, 1920. Serial No. 410,919. 22 Claims. (Cl. 35—13.)

1. A system of cryptography comprising arbitrary allotments of letters, said allotments comprising a number of groups, each derived from a predetermined number of alphabets and assigning to each such allotment a symbol comprising a permutation of the units of a like number of groups of arbitrary symbol units, each group containing units less in number than the letters of the alphabet.

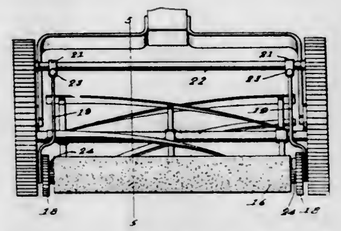


1,379,552. BOAT-HULL. GEORGE GEIST, New York, N. Y. Filed Sept. 20, 1920. Serial No. 411,652. 1 Claim. (Cl. 114—80.)

A boat hull comprising a side portion having a plurality of integral, vertically extending wavelike corrugations throughout its length, said corrugation having an amplitude relatively small compared to the wave length, each wave length being relatively large compared to the length of the hull.

1,379,553. COUNTER-GUARD CONSTRUCTION. CHARLES A. GLOEKLER, Pittsburgh, Pa. Filed Oct. 10, 1919. Serial No. 329,770. 4 Claims. (Cl. 211—25.)

1. The combination with a counter-guard bracket body having an upright front plate and an upright web reaching rearwardly at an angle from said front plate; of an upright flanged attachment arranged to bear against said

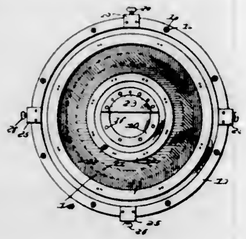


front plate and having a lateral hook to reach around and straddle said web.

1,379,554. SHOWCASE AND COUNTER-GUARD CONSTRUCTION. CHARLES ZIEFEL and KARL J. GLOEKLER, Pittsburgh, Pa. Filed Feb. 3, 1920. Serial No. 355,937. 3 Claims. (Cl. 211—25.)

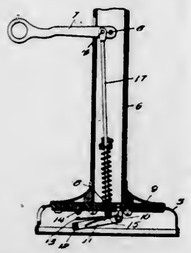
3. An upright metallic corner bracket for joining front, end and top plates and fixing the same relatively to each other; said corner bracket comprising an upright body member to receive the ends of front and end plates, a hollow outwardly-projecting integral head at the upper end of the body member to receive a corner of a top plate, and means connected with the inner side of the body member to retain the ends of front and end plates in said body member.

1,379,555. LAWN-MOWER ATTACHMENT. ALLAN GOODFELLOW, Norton, Mass. Filed Oct. 24, 1919. Serial No. 332,943. 2 Claims. (Cl. 56—249.)



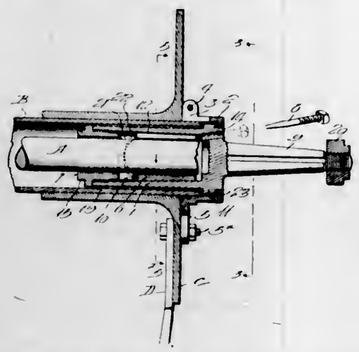
1. The combination with a lawn mower, of a brush carried by the mower and operating in advance of the cutting blades thereof for causing the grass to assume an upright position before being reached by said blades and means for revolving the brush when the mower is traveling in one direction and permitting the brush to remain idle when the mower is traveling in an opposite direction.

1,379,556. HEADLIGHT-DIMMER. JOHN GORMAN, Hot Springs, Ark. Filed Mar. 1, 1920. Serial No. 362,539. 2 Claims. (Cl. 240—48.4.)



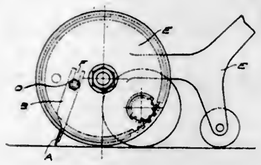
1. A headlight dimmer having a plurality of concentric marginal and intermediate bands of which the outer marginal band carries clamps for attachment to a headlight casing and the inner band carries an overhanging arched

hood, means for securing the bands in concentric relation and a light-penetrable webbing carried by and covering



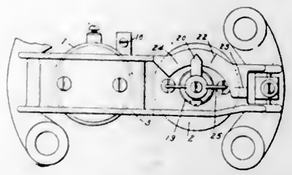
the intervals between said marginal and intermediate bands.

1,379,557. RECEIVER-HOOK SWITCH FOR PORTABLE TELEPHONES. JOHN T. GRAY, Great Falls, Mont. Filed Aug. 13, 1919. Serial No. 317,233. 5 Claims. (Cl. 179—164.)



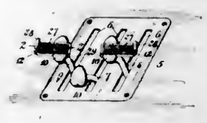
1. In a telephone, a base connected with an upright, a switch upon a supporting plate within said base, said switch comprising an arm pivoted to said base and having at its free end a contact member adapted to engage a contact member on said supporting plate, a rod within the upright and extending through said supporting plate, the lower portion of said rod engaging said pivoted arm intermediate between its point of support and the contact member carried by it, a receiver hook pivoted to the upright and pivotally supporting said rod and means comprising a resilient member for closing the switch when the hook is raised.

1,379,558. EMERGENCY AXLE ATTACHMENT. JULIUS ANTON HAFFNER, Lima, Mont. Filed Jan. 15, 1920. Serial No. 351,724. 7 Claims. (Cl. 301—130.)



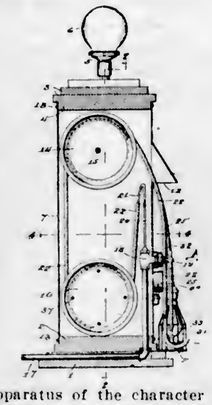
1. In an axle-attachment, a main body comprising a wheel-spindle and a socket, a self-contracting axle-clamp in said socket, and means to increase the contraction and consequent clamping efficiency of said axle-clamp upon rotation of an axle clamped by said axle-clamp.

1,379,559. LAWN-MOWER. ROBERT TINNING HALLIDAY, Cross, Blackwood, Scotland. Filed Apr. 16, 1920. Serial No. 374,340. 1 Claim. (Cl. 56—294.)



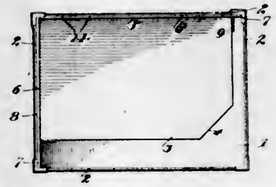
In combination with a lawn mower, a bar extending across the front of the mower, said bar being rearwardly and upwardly inclined, being provided with serrations on its lower edge, and being also provided at its ends with upwardly extending arms, said arms being vertically adjustably secured to the mower.

1,379,560. PROTECTIVE DEVICE FOR INCANDESCENT LAMPS. CROMWELL A. B. HALVORSON, Jr., Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Oct. 26, 1916. Serial No. 127,812. 7 Claims. (Cl. 175—374.)



2. The combination with an incandescent lamp of a coil in series therewith, a coil in shunt to the lamp and the series coil, a movable contact member operated by each of said coils, and a resistance the parts being so arranged and proportioned that when the lamp is not in operation the resistance will be in shunt with the lamp and the series coil, when current starts to flow in the lamp the resistance will be open circuited by the contact member operated by the series coil, and when the voltage across the lamp rises above a predetermined value the resistance will be thrown in shunt with the lamp and the series coil by the contact member operated by the shunt coil.

1,379,561. PEDAL ATTACHMENT FOR AUTOMOBILES. HARRY D. HATHAWAY, Buffalo, N. Y. Filed Apr. 5, 1920. Serial No. 371,225. 9 Claims. (Cl. 74—81.)

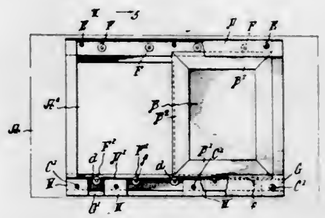


1. In a pedal attachment of the character described, a body portion having a medially arranged elongated slot therein between its ends, a securing element passed through said slot, and means extending from one end of said body portion and adapted to receive said securing element.

1,379,562. DISPENSING APPARATUS FOR AUTOMOBILE SERVICE. JOHN HENRY HECKER, Covington, Ohio. Filed Sept. 2, 1920. Serial No. 407,717. 5 Claims. (Cl. 299—77.)

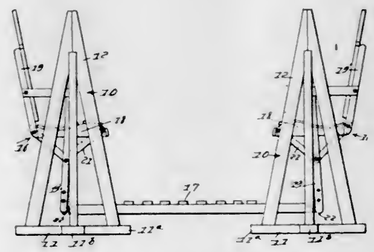
3. In an apparatus of the character described, a plurality of assembled separated casings, a binding cap and a base for the casings, a shaft extending through the casings, sheaves revoluble in the casings on the shaft, gravity sheaves loose within the casings, and dispensing conductors connected with a source of supply through said base and having the gravity sheaves riding thereon, all of said sheaves fitting the casings so as to prevent dislodgment of the conductors.

1,379,563. PARTITION STRUCTURE FOR BOXES. ISIDORE M. HESCHELES, New York, N. Y. Filed Oct. 4, 1920. Serial No. 414,486. 1 Claim. (Cl. 217—7.)



As a new article of manufacture, in combination with a box, of a partition-structure therein comprising a vertical side-wall and a vertical end-wall of the same height as and fitting the inner faces of corresponding walls of said box to keep the partition-structure from accidental displacement, a horizontal shelf engaging the inner faces of and terminating short of the outer ends of said vertical walls, horizontal fastening means extending through said vertical walls and fastened to the outer faces of said vertical walls and to the outer edges of said shelf within the outer marginal ends of said vertical walls, and said shelf provided with a cut-away corner for facilitating the gripping of the shelf when in the box for quickly, manually removing the partition structure from the box.

1,379,564. SHOE. MEYER S. HESS, Baltimore, Md. Filed May 27, 1918. Serial No. 236,837. 10 Claims. (Cl. 36—44.)

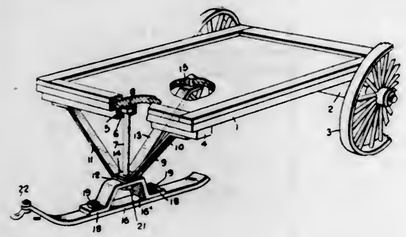


1. A composite insole comprising a plurality of layers having mutually engaging overlapping extensions by which they are interlocked.

1,379,565. DOOR-HANGER. EMORY HICKOK, Engle, N. Mex. Filed Nov. 2, 1920. Serial No. 421,369. 1 Claim. (Cl. 16—7.)

An antifriction arrangement for sliding doors, comprising an inverted metal trough substantially U-shaped in cross section, and having a series of transverse slots in the top thereof, a series of antifriction rollers mounted in said trough and having their cylindrical surfaces projecting through said slots and extending slightly above the top of said trough, reinforcing plates mounted at each side of said trough, and spacing blocks mounted in said trough between said rollers, with bolts securing said plates, said blocks, and said trough together and to the parts of the building surrounding the doorway, and guide rollers mounted above and parallel to said first mentioned rollers, in combination with a door having its upper and lower sides parallel, with its lower edge adapted to rest upon said lower rollers, and its upper edge engaging said guide rollers.

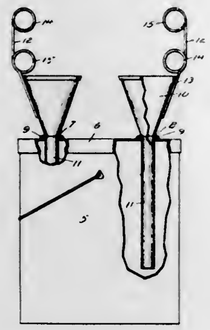
1,379,566. SWING. JAMES E. HOLLAND, Douglasville, Ga. Filed Dec. 2, 1920. Serial No. 427,876. 3 Claims. (Cl. 155—61.)



1. A self supporting swing structure having pairs of independent standards of which the members are arranged in transversely opposite positions and are provided at their upper ends with depending perforated suspension ears, seat members having outwardly and downwardly directed suspension hooks for engagement with said ears, and a foot rest having terminal hook and eye connection with the lower ends of the seat members.

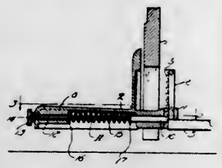
1,379,567. VEHICLE. BENJAMIN WEST HOWARD, Newmarket, Ontario, Canada. Filed Oct. 11, 1920. Serial No. 416,223. 1 Claim. (Cl. 280—8.)

In a vehicle, the combination with a vehicle body, rear axle and wheels mounted thereon, of a cross bar secured at the front of the vehicle body and beneath the same and having a recess in its upper face and an orifice extending from such recess, a bolt having a head fitting the recess and depending through the orifice, bracing members extending from each side of the vehicle and terminating in a horizontal interconnecting portion, a rearwardly inclined brace having a horizontal lower end fitting upon the aforesaid interconnecting portion and secured at its



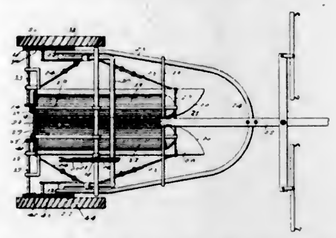
upper end to the vehicle body, a runner, an arched bracket secured to the runner through which and the

horizontal portions of the bracing members the bolt extends, and a nut secured upon the lower end of the bolt within the arched bracket.



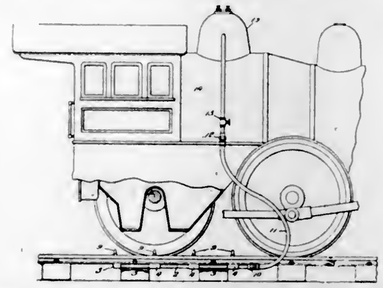
1,379,568. [WITHDRAWN.]

1,379,569. FUNNEL. DEAN STANLEY JACKSON, Albany, N. Y. Filed Feb. 3, 1921. Serial No. 442,133. 6 Claims. (Cl. 226—31.)



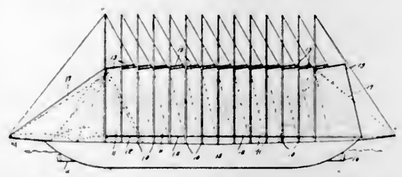
1. An article of manufacture comprising an open funnel having an elongated extension and a resilient finger grip secured to the side of said funnel and extending considerably above and inwardly of the top thereof for supporting the same.

1,379,570. PEDAL DEVICE. BENJAMIN H. JEFFERSON, Chicago, Ill., assignor to Lyon & Healy, Chicago, Ill., a Corporation of Illinois. Filed Nov. 7, 1919. Serial No. 336,270. 1 Claim. (Cl. 84—230.)



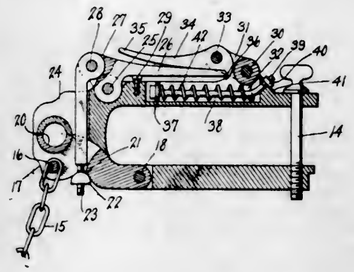
A pedal device comprising a pedal member and a support therefor, said support having an upwardly extending member provided with a rack and said pedal having a loop shaped member surrounding said upwardly extending member, a pin carried by the pedal member and adapted to coöperate with the teeth of said rack, said pin being provided with a longitudinally extending spindle projecting in front of the front end of the pedal member, an adjustable nut on the end of said spindle and a spring surrounding said spindle and inclosed within space in said pedal member, said spring being adapted to hold said pin normally in engagement with said rack.

1,379,571. STALK PULLER AND GRINDER. OSCAR T. JONES, Silver City, Miss. Filed Dec. 23, 1919. Serial No. 346,876. 4 Claims. (Cl. 55—66.)



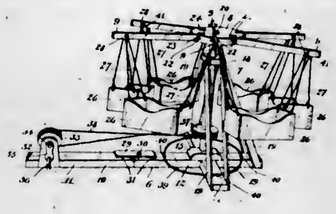
1. A machine for the purpose described having pairs of coöperating crushing rolls disposed axially in planes parallel with the direction of progress of the machine, means for guiding plant stalks to the operative faces of said rolls, and means for rotating the rolls of each pair in opposite directions to cause an upward movement of their contiguous faces.

1,379,572. ASH-PAN HEATER FOR LOCOMOTIVES. GEORGE JORGENSON, Fargo, N. D. Filed Feb. 25, 1921. Serial No. 447,905. 2 Claims. (Cl. 104—51.)



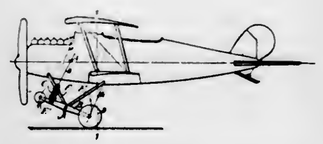
1. In a means for heating the ash pan of a locomotive prior to and at the dumping thereof, the combination of a track and a locomotive which travels on the track, of a series of steam conducting pipes disposed transversely between the rails of the track, upstanding nozzles on the pipes, a longitudinal pipe connecting the transverse pipes, and a flexible connection between the longitudinal pipe and the steam dome of the locomotive.

1,379,573. RIGGING FOR SAILING VESSELS. CHARLES JULIEN, Jersey City, N. J. Filed Nov. 19, 1920. Serial No. 425,206. 5 Claims. (Cl. 114—102.)



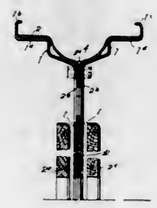
1. A rigging for sailing vessels wherein the main sails are arranged in fore and aft overlapping relation.

1,379,574. AUTOMATIC-RELEASE CLEVIS. JOHN M. KAHL, Heaton, N. D. Filed Aug. 16, 1920. Serial No. 403,662. 5 Claims. (Cl. 213—67.)



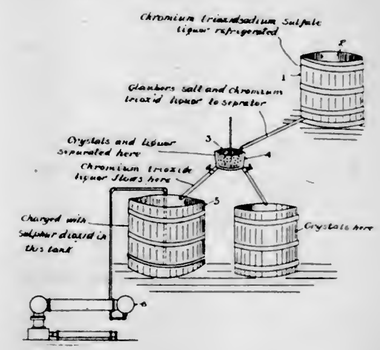
2. An automatic release clevis comprising a body having a jaw, a movable jaw pivoted to the body, a connecting rod engaged with the movable jaw, a lever fulcrumed on the body and connected with the connecting rod, a trip member pivoted on the body, a second lever pivoted to one arm of the trip member and having a portion receiving the free end of the first-named lever, and a spring housed in the body and bearing against the other arm of the trip member.

1,379,575. TOY AERIAL SWING. CHARLES J. KERN, Buffalo, N. Y., assignor to New Era Toy Manufacturing Company, Inc., Cherry Creek, N. Y., a Corporation of New York. Filed Apr. 24, 1919. Serial No. 292,268. 8 Claims. (Cl. 46—27.)



1. A device of the kind described, comprising a foldable base, a vertical mast having its lower end journaled in said base, means for supporting said mast at a point spaced from said base, a driving element mounted on the foldable part of said base, transmission means between said driving element and said mast, arms extending outwardly at the upper end of said mast, and aerial elements suspended from said arms.

1,379,576. LANDING CARRIAGE OR FRAME FOR AIRCRAFT. EDWARD BRICE KILLEN, London, England. Filed June 3, 1919. Serial No. 301,406. 1 Claim. (Cl. 244—2.)

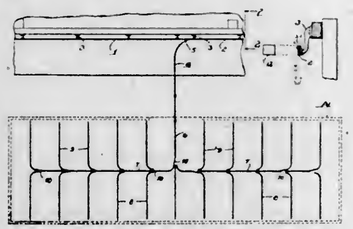


An airship, a landing frame arranged below the body of the airship, said landing frame being pivotally mounted at a point intermediate its ends for vertical angular movement, a shock absorbing spring arranged to normally raise one end of the landing frame, a buffer wheel mounted at the elevated end of the landing frame, a landing wheel mounted at he lower end of the landing frame, a tie wire secured to the airship body and to the upper end of the spring, and a flexible cable to limit the pivotal movement of the landing frame, said cable being connected to the body of the airship and also to the lower end of the landing frame.

1,379,577. WHEEL AND WHEEL-FITMENT. EDWARD BRICE KILLEN, London, England. Filed Feb. 26, 1920. Serial No. 361,531. 2 Claims. (Cl. 301—64.)

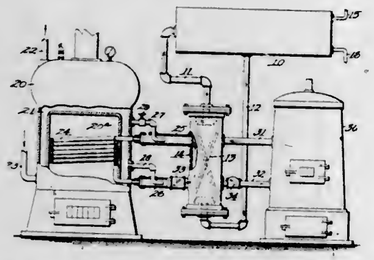
1. A divisible disk wheel with four main dishlike stampings each of which is manufactured in one piece from center hole to circumference, the two outer stampings being detachable from the two inner and forming the front and back faces of the wheel and a hooking clamping device at the wheel's outer circumference, the two inner stampings being rigidly attached together back to back and forming a circumferential distance piece and a rim which lies keyed and locked by and between the extreme hooking flanges of the two detachable face stampings, substantially as described.

1,379,578. PROCESS FOR THE CONVERSION OF CHROMATE AND BICHROMATE OF SODIUM OR POTASSIUM TO CHROMIC SULFATE. FRANK MELBOURNE MOONEY, Montreal, Quebec, Canada, assignor to Formation Syndicate, Montreal, Canada. Filed May 22, 1920. Serial No. 383,599. 3 Claims. (Cl. 23—13.)



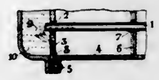
1. The process of making chromic sulfate comprising the freeing by refrigeration of a solution of chromium trioxid from Glauber's salt, the drawing off of the liquor containing chromium oxid and the charging of the said liquor with a reducing sulfur-containing gas.

1,379,579. PUMP MECHANISM. PONTUS OSTENBERG, San Jose, Calif. Filed June 8, 1920. Serial No. 387,330. 12 Claims. (Cl. 253—199.)



1. An article of manufacture comprising a discharge casing section and a shaft casing section arranged therein and supported under tension thereby.

1,379,580. RAIL SYSTEM. DAVID SHORT, Sioux City, Iowa. Filed Feb. 1, 1921. Serial No. 441,626. 6 Claims. (Cl. 104—91.)

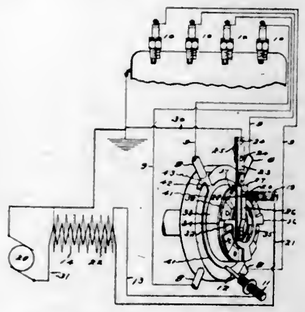


1. The combination with a refrigerator car of a main rail supported longitudinally in the center of the car, and a plurality of branch rails branching off in opposite directions from the main rail.

1,379,581. INDIRECT WATER-HEATING APPARATUS. CHETWOOD SMITH, Worcester, Mass., assignor to Stack Heater Company, Boston, Mass., a Corporation of Massachusetts. Filed May 6, 1919. Serial No. 295,219. 4 Claims. (Cl. 122—37.)

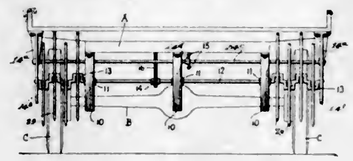
1. Indirect water heating apparatus comprising an indirect heating chamber, a main water heater, an additional heating device capable of heating water to a higher temperature, and connections permitting the flow of water from said device to said heating chamber under normal conditions and permitting the flow of water from said device to said main heater whenever the temperature of the water in said additional heating device and said heating chamber materially exceeds the temperature of the vater in said main heater.

1,379,582. PROCESS FOR THE PROTECTION AGAINST ELECTROLYTIC DESTRUCTION. FRANZ VON WURSTEMBERGER, Zurich, Switzerland. Filed July 23, 1920. Serial No. 398,385. 2 Claims. (Cl. 204—1.)



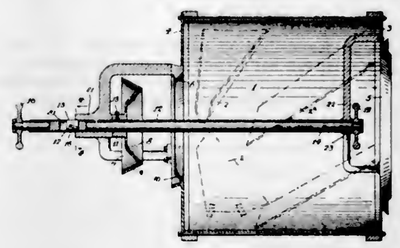
1. The method of protecting from electrolytic destruction certain parts of apparatus which contain at least two liquid spaces and are constructed of different metals, from electrolytic destruction, which comprises equalizing the differences of potential that occur between any parts of different metals contacting with a liquid acting as an electrolyte by connecting together those parts by well conducting durable short circuit devices.

1,379,583. CAR-DOOR. SAMUEL THOMAS WALKUP, New York, N. Y. Filed Sept. 6, 1919. Serial No. 322,047. 4 Claims. (Cl. 268—7.)



1. In a car door control system for trains, a contact rail adjacent which a car is adapted to come to rest, car door operating means, means for electrically controlling said car door operating means, including a contact member on the car adapted to engage the said rail, and a hand switch adapted for mounting on a stationary part independent of the car.

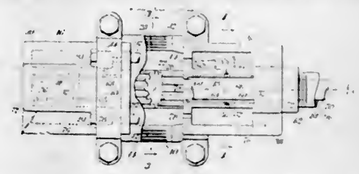
1,379,584. CURRENT-DISTRIBUTER FOR INTERNAL-COMBUSTION ENGINES. HAROLD D. WATERHOUSE, West Hartford, Conn. Filed Oct. 23, 1919. Serial No. 332,748. 8 Claims. (Cl. 200—20.)



1. A current distributer for internal combustion engines comprising a sleeve adapted to be secured to a rotatory shaft, an insulating casing rotatably mounted on the sleeve, a binding post with a conducting contact mounted on the casing, a resilient metallic arm with one end secured to the casing, an insulating block secured to the sleeve, a cam connected with the block and adapted at intervals to place the resilient arm under tension and cause the repeated engagement of the arm with the binding post contact, binding posts on the casing, and a conductor rotatable with the block and adapted to sequentially electrically communicate with the last mentioned binding posts.

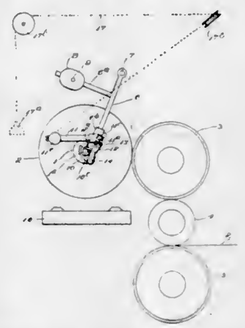
1,379,585. EXTRICATING DEVICE FOR MOTOR-VEHICLES. JOHN E. COGGON, Viola, Wis. Filed July 12, 1920. Serial No. 395,671. 2 Claims. (Cl. 180—8.)

1. In combination with a motor truck, an extricating device comprising guide members depending from the rear portion of the truck, a horizontal shaft slidably mounted within said guides and having its end portions formed with cranks, a second shaft journaled above said first named shaft, a plurality of steppers mounted upon said crank portions and having their upper ends slidably and rockably engaged upon said second named shaft, means for raising and lowering said first named shaft, and means for turning said first named shaft, said raising and lowering means comprising sprockets secured upon said second named shaft, other sprockets journaled at the lower ends of said guides, chains trained about corresponding ones of said sprockets and connected with said slidable support, and means for rocking said second named shaft.



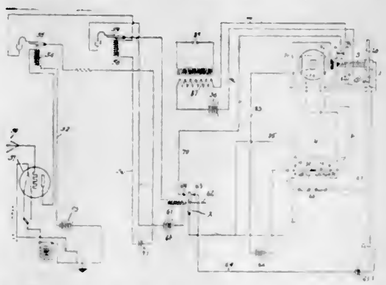
1,379,586. CONCRETE-MIXING APPARATUS. JOHN P. FABER, Dunellen, N. J., assignor to Ransome Concrete Machinery Company, a Corporation of New York. Filed Apr. 6, 1917. Serial No. 160,088. 10 Claims. (Cl. 83—73.)

1. The combination of a rotatable drum, provided with a discharge opening at one head, said discharge opening being at the axis of rotation, a door supporting member extending to said opening and a door mounted thereon, said supporting member being mounted on the drum, and means for moving the said supporting member and the door to and from the said discharge opening to open and close the same, the said door supporting member comprising a hollow member extending parallel with the axis of the drum and connected with the door, and a member movable with the same, and means for securing the door operable by the movement of said inner member.



1,379,587. PUMP. JAMES P. FISHER, Bartlesville, Okla., assignor, by mesne assignments, to Doherty Research Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 16, 1919. Serial No. 317,852. 21 Claims. (Cl. 103—44.)

1. A high speed gear pump, which comprises a gear chamber, a pair of intermeshing pumping gears disposed in substantial contact with walls of said chamber, rotatable shafts rigidly fastened to and supporting said gears, means for conducting fluid from the high pressure side of said gears to the sides of said shafts facing toward the

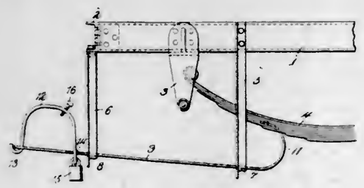


low pressure sides of the chamber, and means for withdrawing fluid from the low pressure sides of the shafts.

1,379,588. ROLL-SUPPORT. LORENZ FLICK, Sayleville, R. I., assignor, by mesne assignments, to Sayles Finishing Plants, Inc., Sayleville, R. I., a Corporation of Rhode Island. Filed Oct. 27, 1919. Serial No. 333,818. 12 Claims. (Cl. 242—65.)

1. The combination, in a roll-support, with a gravitating swinging arm, of a journal-engaging member connected movably with said arm, a gravitating operating lever, a link-connection between said lever and the said journal-engaging member and through which said lever moves said member into working position for engagement with a roll-journal and withdraws such member to free the roll-journal, and stops defining a position of said operating lever and link-connection in which they form a toggle-lock for the journal-engaging member.

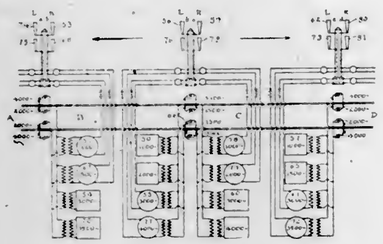
1,379,589. WIRELESS APPARATUS. HENRY H. HYDER, Hollywood, Calif. Filed June 5, 1918. Serial No. 238,243. 9 Claims. (Cl. 250—2.)



1. In mechanism of the character described, the combination of a movably mounted carriage, a guide arm movably attached thereto, means adapted to actuate said carriage in either direction, and a series of guides interposed between the normal path of said guide arm and a member

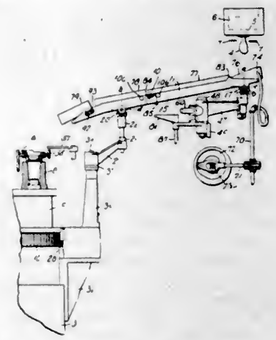
to be engaged thereby, said guides being adapted to actuate said guide arm into engagement with the member only upon a predetermined series of movements of said carriage.

1,379,590. FLEXIBLE PLASTIC COMPOSITION. ALBERT L. CLAPP, Danvers, Mass., assignor to The Flintkote Company, Boston, Mass., a Corporation of Massachusetts. Filed June 23, 1920. Serial No. 391,164. 9 Claims. (Cl. 106—31.)



1. A composition of matter which is pliable, water-repellent and relatively non-adhesive at ordinary temperatures, and which comprises asphalt, clay and Portland cement.

1,379,591. TIRE-CARRIER FOR MOTOR-VEHICLES. PHILIP FORSCHLER and ALBERT L. FORSCHLER, New Orleans, La. Filed Sept. 7, 1920. Serial No. 408,767. 2 Claims. (Cl. 224—29.)

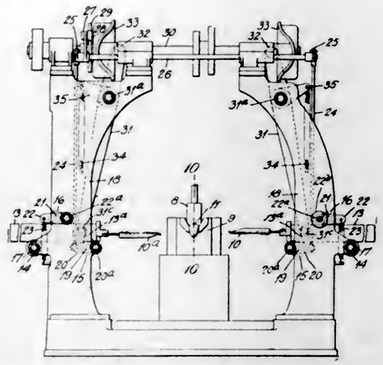


1. In a device for the purpose set forth, the combination of downwardly extending portions secured to the under side of the chassis, other downwardly extending portions secured to the rear of the chassis and integral portions extending from one to the other of the series of downwardly extending portions, a rib mounted on the integral portions and having an up-turned inner end and means arranged on the opposite end of the rib for securely fastening a tire thereon; said means comprising a bail that is hinged to the rib and having a portion that passes through an aperture of the rib and a thumb-screw arranged in the bail.

1,379,592. CONTROL-CIRCUITS FOR OPERATING BLOCK-SIGNALING DEVICES AND THE LIKE UPON RAILWAYS. JOHN A. MILLER, Waukegan, Ill., assignor to Laurence R. Wilder, Chicago, Ill. Filed Apr. 19, 1920. Serial No. 374,793. 8 Claims. (Cl. 246—34.)

2. A system of the class described comprising a track divided into blocks, tuned bypasses connecting the rails of contiguous blocks, means for impressing a high frequency current capable of traversing said bypasses upon the rails of one block, and signal devices comprising a high frequency current receiver connected with the rails of the adjacent block, said signal devices indicating caution when said receiver is not detecting said high frequency current, and indicating safety when said receiver is detecting such high frequency current.

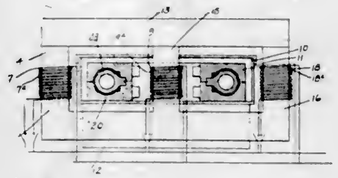
1,379,593. GLASS-CONVEYING APPARATUS. KARL E. PEILER, Hartford, Conn., assignor to Hartford-Fairmont Company, Canajoharie, N. Y., a Corporation of New York. Filed Mar. 20, 1915, Serial No. 15,875. Renewed July 18, 1917. Serial No. 181,452. 61 Claims. (Cl. 49—5.)



1. Apparatus for conveying molten glass, including means for delivering the glass, and a conduit mounted for lateral movement at different portions of its length independently of each other.

43. In apparatus for conveying molten glass, the combination of an inclined conduit, means for supplying lubricating fluid to a higher portion of the conduit whereby the fluid flows to a lower portion, and means for diverting the flow of the fluid before it reaches the end of the conduit.

48. The combination, in feeding and conveying apparatus for conveying molten glass, of an outlet for the molten glass, a cullet receptacle located below the outlet, and a conduit movable into position to intercept the glass fed from the outlet and conduct it away, and movable away from that position to allow the glass to fall into the cullet receptacle.

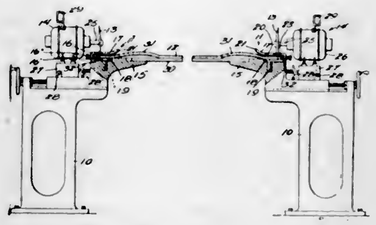


58. Means for delivering molten glass to receptacles moving in a curved path, from a source of supply at one side of that path, including a delivery conduit mounted for sidewise and endwise movements to approximately follow the said path.

1,379,594. GLASS-SEVERING. KARL E. PEILER, West Hartford, Conn., assignor to Hartford-Fairmont Company, Canajoharie, N. Y., a Corporation of New York. Filed June 18, 1918. Serial No. 240,674. 15 Claims. (Cl. 49—14.)

1. In a machine having reciprocatory shear blades for cutting molten glass, mechanism for independently tilting each of the shear blades downwardly while they are cutting.

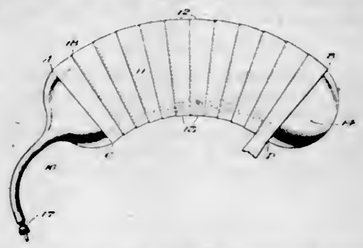
1,379,595. APPARATUS FOR THE TREATMENT OF ARTICLES WITH HEAT. CLIFFORD W. POST, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed May 22, 1919. Serial No. 298,964. 9 Claims. (Cl. 18—6.)



1. In an apparatus of the kind described, a mold of electric conducting material adapted to have a rubber article associated therewith, said mold having a groove, a ring in said groove of material of different resistance from that of said mold, said ring being replaceable by rings of different material, and means for inducing an electric current in said mold and ring to heat the same, the degree of heat being controlled by the relative resistance of said ring.

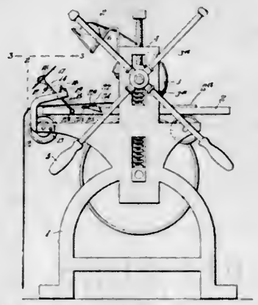
1,379,596. CELLULOSE-NITRATE COMPOSITION. PAUL C. SEEL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Apr. 26, 1919. Serial No. 292,998. 4 Claims. (Cl. 106—37.)

4. A composition of matter comprising cellulose nitrate, triphenyl phosphate and fusel oil.



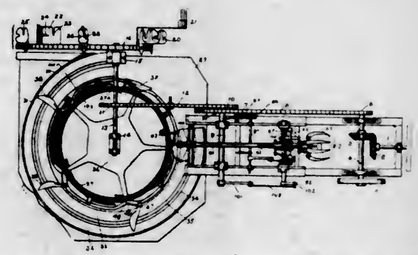
1,379,597. SELVAGE-TRIMMER. ROLAND S. TROGNER, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 6, 1918. Serial No. 261,352. 23 Claims. (Cl. 164—61.)

1. The herein described method of trimming fabric which consists in effecting movement thereof and, at substantially the same time, producing a reactive buckle in the fabric contiguous to its edge, and then trimming such fabric along a line somewhat removed from the edge.



1,379,598. AIR-BAG AND METHOD OF WRAPPING THE SAME. RICHARD S. BURDETTE, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 2, 1919. Serial No. 321,130. 14 Claims. (Cl. 18—45.)

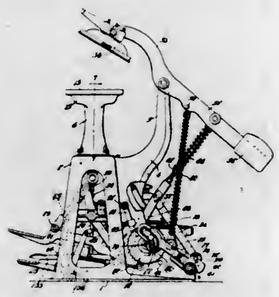
1. The method of producing a strip of fabric for winding about the ring portion of an annular object, which consists in longitudinally cutting a length of fabric to produce uniform alternate wide and narrow portions adapted



to cover respectively the outer and inner peripheries of said object.

1,379,599. LABEL-PRINTING MACHINE. JULIUS M. REIS and BENJAMIN FRIEDMAN, New York, N. Y., assignors to G. Reis & Bro., Inc., New York, N. Y., a Corporation of New York. Filed Nov. 2, 1918. Serial No. 260,816. 4 Claims. (Cl. 101—261.)

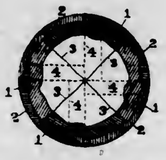
1. A machine for printing labels on tape of woven fabric having in combination, a solid printing plate for printing labels on tape, a coöperating solid pressure member, a relatively soft covering for said pressure member, means whereby the tape is automatically fed between said plate and pressure member, and means operating in timed relation to said printing means to make transverse slits in the tape to form places therein for the engagement with automatic feeding means, said slit making means comprising rounded disrupting means embedded in said soft covering and backed firmly by said solid pressure member and adapted to engage a substantially solid flat face on said printing plate.



1,379,600. FRUIT-HANDLING MACHINE. JAMES HENRY TOMPKINS and CARROLL J. FOSTER, Webster, N. Y. Filed June 4, 1920, Serial No. 386,574. Renewed Apr. 8, 1921. Serial No. 459,742. 9 Claims. (Cl. 146—8.)

1. A machine for handling fruit comprising a vertical elevating mechanism, a track, a feeding mechanism mount-

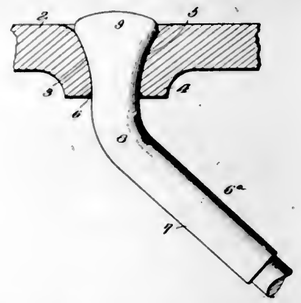
ed to travel over said track, and a vertical pick up mechanism, said horizontal feeding mechanism being adapted to right the fruit during its travel over said track feeding mechanism and place the fruit into a predetermined position with relation to said pick up mechanism.



1,379,601. GARMENT-PRESS. WILLIAM E. ANDRÉE, Chicago, Ill., assignor to The American Laundry Machinery Company, Norwood, Ohio, a Corporation of Ohio. Original application filed June 7, 1916, Serial No. 102,296. Divided and this application filed Oct. 31, 1919. Serial No. 334,785. 60 Claims. (Cl. 68—9.)

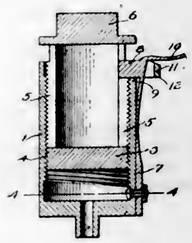
1. In a garment press, relatively movable pressing members, means including treadle mechanism for producing closing and opening movement of the press, motor means, means actuated thereby for exerting a final pressure between said members and means for locking the treadle mechanism against operation by the operator during the application of pressure by the final pressure creating means.

REISSUES.



15,108. NON-PNEUMATIC RUBBER BALL AND PROCESS OF MANUFACTURING THE SAME. KINSUKE FUKUDA, Tokyo, Japan. Filed Mar. 21, 1921. Serial No. 454,229. Original No. 1,320,221, dated Oct. 28, 1919, Serial No. 277,708, filed Feb. 18, 1919. 5 Claims. (Cl. 154—16.)

1. Process of manufacture of non-pneumatic rubber ball, characterized by making firstly an inner ball of four quadrantal segments made of the raw material of the spongy rubber, secondly in covering the inner ball by four quadrantal segments of the outer ball made of the raw material of the ordinary rubber, not coinciding the seams with each other and thirdly by heating suitably the double ball thus made in a mold, so as to convert the outer ball into the ordinary rubber and the inner ball into the spongy rubber, substantially as set forth.

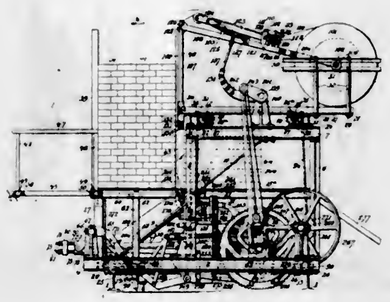


15,109. WIRE-SPOKE CONNECTION. JAMES H. GRAHAM, Torrington, Conn., assignor, by mesne assignments, to The Torrington Company, Torrington, Conn., a Corporation of Connecticut. Filed Mar. 23, 1921. Serial No. 454,904. Original No. 1,333,019, dated Mar. 9, 1920, Serial No. 188,434, filed Aug. 27, 1917. 3 Claims. (Cl. 184—48.)

1. A spoke connection comprising a hub having a lateral flange provided with a series of transversely projecting flanges thereon, said hub and flanges being provided with continuous openings, the walls of which form arcs of circles, the outer edges of said flanges flaring outwardly,

spokes fitting in said openings, said spokes being formed with bell-shaped heads, the walls of which are of substantially the size and formed on the same arc of a circle as the openings in the hub and flange.

15,110. LOCKING DEVICE. BURTON M. KENT, Sayre, Pa., assignor of one-half to Edward M. Ragan, Binghamton, N. Y. Filed Jan. 6, 1919. Serial No. 269,880½. Original No. 1,211,451, dated Jan. 9, 1917, Serial No. 42,369, filed July 28, 1915. 3 Claims. (Cl. 301—59.)



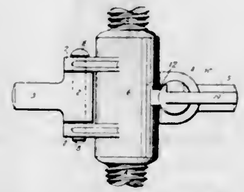
1. A device of the kind described, comprising a cup interiorly threaded, a plunger exteriorly threaded for engagement in the cup, said plunger having a longitudinal slot formed therein, a spring arm having one end fixed exteriorly to the side of the cup adjacent the bottom thereof and its other free end provided with a head adapted to engage said slot, said head bearing a finger piece and means carried by the cup adjacent said finger piece to constitute a hand hold in grasping said head for actuation thereof.

2. A device of the kind described, comprising a cup interiorly threaded, a plunger exteriorly threaded for operation therein, said plunger having a longitudinal slot formed therein, a spring arm having its lower end fixed exteriorly of the cup and its upper end provided with a head adapted to engage said slot, a finger piece carried by the head, and means mounted on the cup and adapted to be grasped with the finger piece to disengage the head from said slot, said means constituting also a guide and support for said head.

3. A device of the class described, comprising a cup interiorly threaded, a plunger exteriorly threaded for threaded engagement in the cup, said plunger having a plurality of longitudinal slots formed therein, a steel arm having its lower end fixed exteriorly of the cup, and its upper end provided with a head adapted to engage a selected slot, a finger piece carried by the head, and a bracket carried by the cup and adapted to be grasped with the finger piece to disengage the head from a selected slot.

15,111. AUTOMATIC BUNDLING AND TYING MACHINE. JAMES MARSHALL LEAVER, Jr., Oakland, Calif. Filed Apr. 19, 1920. Serial No. 375,163. Original No. 1,295,531, dated Feb. 25, 1919, Serial No. 137,876, filed Dec. 19, 1916. 229 Claims. (Cl. 100—31.)

1. In a machine for binding bundles of incompressible material, the combination with a main frame having a bundle support, of an upper auxiliary frame supported at the top of the main frame and carrying a needle bar, and a lower auxiliary frame disposed below the top of the main frame and carrying knotting mechanism which is located substantially at the lower edge of the bundle when in binding position.



12. In a machine of the character described, means for feeding wire across the path of movement of a bundle of material forward and rearward of the same when moved, means for moving the material to bring said wire into loop formation about said material, means for uniting the stretches of the wire at the point of meeting of the same, and means for severing the wire beyond the point of uniting of its stretches together.

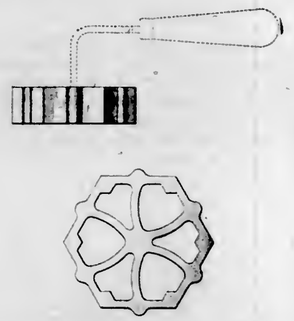
34. In a machine for binding bundles of incompressible material, a frame including a support for the bundle, means for moving the bundle along said support, wire knotting means, wire severing means, means for engaging the free end of the wire after each severing operation to draw predetermined lengths thereof outwardly to cover substantially one face of the bundle, a tension device for the wire, and guiding means for the drawn-out section of the wire.

123. In a machine for binding bundles of incompressible material, the combination of means for placing a band around a bundle, knotter mechanism for tying one end of the band to a section thereof, the tie or knot formed being located at one of the lower edges of the bundle and projecting from the latter, means for severing the wire beyond the tie and means carried by the knotter mechanism for bending the tie against one of the faces of the bundle.

228. In a machine for binding bundles of incompressible material, a frame having laterally spaced apart bundle-supporting elements, means for moving a bundle along said bundle-supporting elements into binding position and holding the bundle during the binding operation, a reciprocatory needle bar supported on the frame above said bundle-supporting elements and movable through the space between said supporting elements, a wire knotting mechanism supported on the frame below said bundle-supporting elements, said needle bar coacting with said wire knotting mechanism to deliver the wire thereto in the path of the bundle-moving means so that the bundle is moved against a substantially vertical strand of wire causing the bundle to be inclosed by the wire on three sides, the needle bar being actuated to inclose the fourth side, means for tensioning the wire as it is being drawn out to envelop the bundle, said wire knotting mechanism forming the knot on the band substantially at the lower edge of the bundle, means for severing the band, and means for gripping the end of the wire beyond the knot for the next operation, said means operating in such order whereby the binding operation is completed during a complete cycle of the machine.

15,112. SECTIONAL COAL-AUGER NUT. JULIUS HARWOOD MASON, Duncan Falls, Ohio, assignor, by direct and mesne assignments, to C. C. Hartzell, doing business as The Hartzell Sales Company, Huntington, W. Va. Filed Nov. 15, 1919. Serial No. 338,394. Original No. 1,297,215, dated Mar. 11, 1919, Serial No. 246,271, filed July 22, 1918. 6 Claims. (Cl. 255—46.)

1. In a sectional coal-auger nut, the combination with one of the nut sections provided with a lock having a key-hole and a slot communicating with said key-hole, and also, having a key provided with a head having a slot adapted to register with said lock slot, of the other nut section provided with a lug adapted, in closing said nut sections, to pass into said registering slots and clear through said key-head slot and into said key-hole, and to be locked therein by means of said key-head, substantially as described.



DESIGNS.

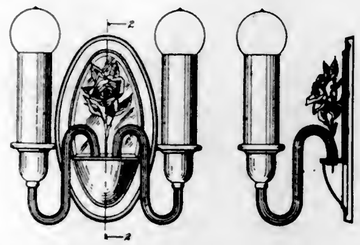
57,960. CASING FOR SCALES. EDWARD G. ALLEN and ABNER A. HAGAR, Seattle, Wash., assignors of one-third to Willis H. Bullinger, Los Angeles, Calif. Filed Jan. 10, 1921. Serial No. 436,377. Term of patent 14 years.

The ornamental design for casing for scales as shown.

57,961. WAFFLE-IRON. WILLIAM V. BOZZELLE and JOHN W. HUMMEL, Philadelphia, Pa. Filed Sept. 17, 1920. Serial No. 410,992. Term of patent 7 years.

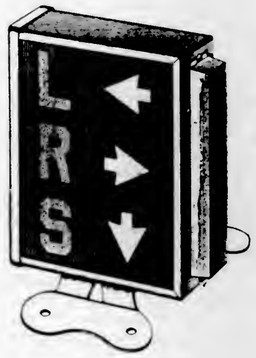
The ornamental design for a waffle iron, as shown.

57,962. HOOD FOR MOTOR-VEHICLES. JOHN F. COEL, Cleveland, Ohio. Filed Jan. 3, 1921. Serial No. 434,808. Term of patent 7 years.



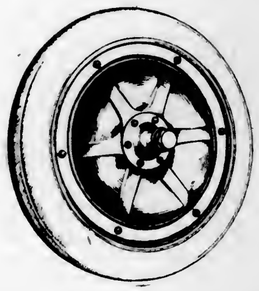
The ornamental design for a hood for motor vehicles substantially as shown.

57,963. HOOD FOR MOTOR-VEHICLES. JOHN F. COEL, Cleveland, Ohio. Filed Jan. 3, 1921. Serial No. 434,809. Term of patent 7 years.



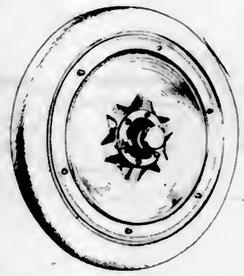
The ornamental design for a hood for motor vehicles substantially as shown.

57,964. WALL-BRACKET OR CANDELABRUM FOR ELECTRIC AND OTHER ILLUMINATION. JOSEPH W. DAVIDSON, Cincinnati, Ohio. Filed Oct. 25, 1920. Serial No. 419,544. Term of patent 14 years.



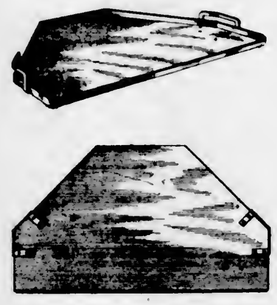
The ornamental design for a wall bracket or candelabrum for electric and other illumination, as shown and described.

57,965. SIGNAL. ISRAEL V. EDGERTON, Chicago, Ill., assignor to Double Safety Signal Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 3, 1920. Serial No. 428,131. Term of patent 14 years.



The ornamental design for a signal, as shown.

57,966. WHEEL. GEORGE H. FORSYTH, Chicago, Ill. Filed Feb. 5, 1921. Serial No. 442,839. Term of patent 14 years.



The ornamental design for a wheel, as shown.

57,967. WHEEL. GEORGE H. FORSYTH, Chicago, Ill. Filed Feb. 5, 1921. Serial No. 442,840. Term of patent 14 years.

The ornamental design for a wheel, as shown.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

DECISIONS OF THE U. S. COURTS.

Court of Appeals of the District of Columbia.

AUNT JEMIMA MILLS COMPANY *v.* THE BLAIR MILLING COMPANY.

Decided February 7, 1921.

1. TRADE-MARKS — SIMILARITY — FULL-LENGTH FIGURE SIMILAR TO BUST FIGURE.

A mark consisting of the word "Sambo," with the full-length representation of a negro having a white cap on his head and wearing a long apron, is not entitled to registration in view of the prior adoption and use by opposer of the well-known mark "Aunt Jemima," comprising a bust picture of a smiling negress with a handkerchief wrapped about her head and shoulders.

2. SAME—SAME—MANNER IN WHICH MARKS MAY BE USED AN IMPORTANT CONSIDERATION—BUST AND FULL-LENGTH FIGURES.

In determining the question of possible confusion between the mark of an applicant for registration and opposer's mark it is proper to consider the manner in which applicant's mark may be used. Where opposer's mark comprised a bust figure and applicant's a full-length figure the lower portion of which was partly obscured by printed matter and might easily be more obscured, the difference in the extent of the representation was not of much moment.

3. SAME—SAME—ADOPTION OF SIMILAR MARK IMPLIES INTENTION TO TAKE ADVANTAGE OF REPUTATION.

Where a new manufacturer adopts as his trade-mark a representation similar to that of an existing well-known trade-mark of a manufacturer of the same class of goods in the same vicinity, the only inference possible is that of gaining advantage from the wide reputation of the established manufacturer.

4. SAME—DOUBT AS TO IDENTITY RESOLVED AGAINST NEWCOMER.

Where there is doubt about the identity of two marks, the doubt will be resolved against the one last in the field.

Mr. F. M. Phelps and *Mr. E. S. Rogers* for Aunt Jemima Mills Co.

Mr. Hervey S. Knight, Mr. Arthur C. Brown, and *Mr. Jas. W. Orr* for The Blair Milling Co.

VAN ORSDEL, *J.:*

Appellant company, a Delaware corporation, with its place of business at St. Joseph, Mo., filed its opposition to the registration of a trade-mark by appellee company, a Kansas corporation, doing business at Atchison, Kans., twenty-three miles from St. Joseph.

Appellant's device is the well-known "Aunt Jemima" trade-mark for self-rising buckwheat-flour. It consists of the words "Aunt Jemima's," having underneath the bust picture of a full-faced smiling negress, with a handkerchief wrapped about her head and shoulders. This mark has been used by appellant company and its predecessor in business at St. Joseph, Mo., on pancake-flour since 1889, and on buckwheat-flour since 1904. Appellee's mark consists of the word "Sambo," having underneath the representation of a full-faced, clean-shaven, smiling negro, having a white cap on his head and wearing a long apron, bearing in one hand a plate of smoking cakes, and in the other hand a cake-turner. This mark has been used by appellee company at Atchison, Kans., on pancake-flour since 1913, and on pancake buckwheat-flour since August 7, 1916.

The opposition is based upon the similarity of the marks and the likelihood of confusion in trade when the marks are applied to goods of the same descriptive properties.

From an order dismissing the notice of opposition, this appeal was taken.

The goods on which the marks are used are the same, and we think the marks are deceptively similar. It is urged that the goods would be distinguished as "Sambo" and "Aunt Jemima's" brands, but we doubt this conclusion. The Aunt Jemima flour has become so widely known that a glance at the picture would satisfy the average purchaser. In other words, while the goods are known by the name, the picture is the distinguishing feature by which the goods are visually identified.

In determining the question of possible confusion and resulting damage, it is proper to consider the manner in which appellee's mark may be used. Cartons were produced at bar as exhibits on which the lower part of the figure of the negro cook was so covered with printed matter that to the casual observer only the shoulders and head were plainly visible. Should registration be granted, the printed matter could be extended until only a bust picture remained, and nothing would prevent the registrant from using whatever coloring it desired in setting forth the mark, so long as the style of dress and the features of the negro were retained.

We think our opinion in the case of *Wayne County Preserving Co.* v. *Burt Olney Canning Co.* (32 App. D. C., 279) is controlling here. There, as here, the marks were used on the same kind of

goods. There, as here, the parties were located in neighboring towns, and there, as here, one was a bust picture and the other a full-length figure. The mark of the appellant company in that case consisted of a bust portrait of General Wayne in colonial military uniform, while the mark of appellee company consisted of a full-length figure of a colonial military officer designated by the words "Col. Willett."

Considering the similarity of the marks, the court said:

These marks, when appearing on the canned goods of the respective parties, exposed to the public on the shelves of the retailer, are so similar as to be likely to cause confusion; and where, as in this case, there is no evidence on that subject except the marks themselves, it is the duty of the court to protect the prior registrant and user from the probability of such occurrence. It is strangely coincident that appellee, engaged in the same business as appellant, and located in an adjoining county to where appellant has used his mark for many years, should select a mark so similar. The property right in trademarks is a valuable one, and is entitled to protection from those who would profit by its limitation, and the courts should resolve the doubt, if any exists, in favor of the prior registrant.

So here, the adoption of the mark before us by appellee company, situated only twenty-three miles from where appellant company has for years been manufacturing and widely distributing its goods bearing the Aunt Jemima mark, will admit of but one inference—that of gaining advantage from the wide reputation established by appellant in the goods bearing its mark.

While the case is a close one, the court will adhere to its rule and resolve the doubt in favor of the opposer. As was said by Mr. Chief Justice Smyth, in *William Waltke & Co.* v. *Geo. H. Schafer & Co.* (49 App. D. C., 254; 263 Fed., 650:)

The case is not free from difficulty, but where there is doubt the courts resolve it against the newcomer. (*Lambert Pharmacal Co.* v. *Mentho-Listine Chemical Co.*, 47 App. D. C., 197.) The reason for this is, as has been said by this court more than once, that the field from which a person may select a trade-mark is practically unlimited, and hence there is no excuse for his impinging upon, or even closely approaching, the mark of his business rival. (*O. & W. Thum Co.* v. *Dickinson*, 46 App. D. C., 306; *Florence Mfg. Co.* v. *J. E. Dowd & Co.*, 178 Fed., 75; 101 C. C. A., 565.) Where he does so he is open to the suspicion that his purpose is to appropriate to himself some of the good will of his competitor.

The decision of the Commissioner of Patents is reversed.

Reversed.

Mr. Chief Justice SMYTH dissents.

Court of Appeals of the District of Columbia.

BISSELL *v.* PHELPS.

Decided February 7, 1921.

1. PATENTS—INVENTION NOT REDUCED TO PRACTICE BY MAKING MODEL OUT OF CLAY.

An invention relating to caps for the outside end of conduits through which electric wires are led into buildings was not reduced to practice by making a model out of ordinary molding-clay, which would have broken or disintegrated if any attempt had been made to use it.

2. SAME—PRIORITY—LACK OF DILIGENCE IN FILING APPLICATION.

An applicant who conceived the invention in issue on March 25, 1915, gave directions for the preparation of an application in July, 1915, executed it June 5, 1916, and filed it August 29, 1916, is not entitled to an award of priority over another who was later in conception, but who filed his application on August 19, 1915, where the excuse given by the junior party for the delay in executing his application was futile and there was no attempt to explain the subsequent delay in filing the application.

Mr. A. E. Parsons for Bissell.

Mr. H. W. Bowen and *Mr. W. L. Edmonston* for Phelps.

SMYTH, *C. J.*:

The appellant Bissell lost before the three tribunals on the question of reduction to practice. The invention relates to caps which are designed to cover the outside ends of conduits through which electric wires are led into buildings. Bissell, who is the junior party, made a drawing of the invention in February, 1915, and a clay model on March 25 of the same year, and, about July, 1915, gave directions to have an application for patent prepared. He did not file until August 29, 1916. Phelps, the senior party, made a sketch about March 31, 1915, and constructed a wooden model about June 30, 1915. From that time until he filed on August 19, same year, he was diligent. He was given as his date of conception as early as June, 1915.

Bissell, on the other hand, is entitled to conception as of March 25, 1915, thus placing him ahead of Phelps's earliest date. Being the first to conceive and the last to file, if he succeeds he must do so by proving an actual reduction to practice prior to any date accorded to Phelps for reduction to practice, or by showing diligence on his part running from a time just prior to that when Phelps entered the field down to his own date of filing. Was Bissell's clay model a reduction to practice within the meaning of the law? Speaking of it the Examiner of Interferences said:

No attempt was ever made to subject that model to any tests corresponding to the conditions surrounding such caps in actual use. And an examination of the model forces the conclusion that, if subjected to such tests, its parts could not be secured together; it would break down on pulling the wires threaded through it; and it would disintegrate under the action of rain.

In reference to the same point the Assistant Commissioner observed:

This model was obviously not capable of use for the purpose for which it was intended since it was made of ordinary molding clay. At the best it merely illustrated the manner in which a device embodying the invention should be built and disclosed substantially nothing that would not have been disclosed in an accurate drawing.

He, of course, united with the other tribunals in the conclusion that the model did not amount to an actual reduction to practice, and he was right. It is a rule of decision, long established, that the mere making of a model is not a reduction to practice unless capable of use. (*Lindemeyr* v. *Hoffman*, 18 App. D. C., 1; *Hammond* v. *Basch*, 24 App. D. C., 469.) The evidence shows that this model was not capable of use.

With respect to the question of diligence, Bissell, as we have said, gave directions to prepare an application for patent some time in July, 1915. It was not executed by him until June 5, 1916, and was not filed before August 29, same year. While an attempt was made to excuse the long delay between the date on which Bissell gave directions to have an application prepared and the date on which he signed it, it was utterly futile. But not even an attempt was made to account for the delay of nearly three months betwen the date on which he signed the application and the date on which it was filed by him in the Patent Office. Hence the conclusion was inevitable that Bissell was lacking in diligence in reducing his invention to practice, actual or constructive.

The decision of the Commissioner of Patents is affirmed.

Affirmed.

Supreme Court of the United States.

THE BALDWIN COMPANY AND THE VALLEY GEM PIANO COMPANY *v.* R. S. HOWARD COMPANY. (139.)

Appeal from the Court of Appeals of the District of Columbia.

THE BALDWIN COMPANY *v.* R. S. HOWARD COMPANY, (113.)

On petition for a writ of certiorari to the Court of Appeals of the District of Columbia.

Decided April 11, 1921.

1. TRADE-MARKS—REVIEW OF DECISION OF COURT OF APPEALS ON APPEAL FROM COMMISSIONER—JURISDICTION OF SUPREME COURT.

Section 9 of the act of February 20, 1905, (33 Stat. L., 728,) providing for appeals to the Court of Appeals of the District of Columbia from decisions of the Commissioner of Patents in trade-mark cases, does not authorize a judgment, but only the return by the court of appeals of a certificate to the Commissioner of Patents, to be there entered of record to govern further proceedings in the case. As proceedings may then be instituted under section 4915, Revised Statutes, as in patent cases, such a decision of the court of appeals is in no sense a final judgment reviewable by the Supreme Court on certiorari or appeal.

2. SAME—JURISDICTION OF SUPREME COURT—INADVERTENT ALLOWANCE OF WRIT OF CERTIORARI IN A PRIOR CASE.

An inadvertent allowance by the Supreme Court of a writ of certiorari to review a decision of the Court of Appeals of the District of Columbia on an application to register a trade-mark does not establish the jurisdiction of the court. (*Fritch* v. *United States*, 248 U. S., 458, 463.)

Mr. John E. Cross and *Mr. Lawrence Maxwell* for The Baldwin Company.

Mr. Samuel S. Watson for R. S. Howard Company.

Mr. Justice DAY delivered the opinion of the Court.

No. 139 is here upon an appeal from a decision of the Court of Appeals of the District of Columbia reversing the decision of the Commissioner of Patents.

No. 113 is an application for a writ of certiorari to review the same decision of the Court of Appeals of the District of Columbia. The case is reported in 48 D. C. Apps., 437.

The Commissioner of Patents refused to cancel the certificates of registration of a trade-mark consisting of the word "Howard" registered by The Baldwin Company, October 17, 1905, and made a like ruling refusing to cancel the certificate of registration of the word "Howard" arranged in monogram with the initials "V. G. P. Co." registered March 8, 1898, which marks were registered as trademarks for pianos. The appeals were heard together in the District Court of Appeals upon the appeal of the Howard Company.

Proceedings were brought in the Patent Office by the Howard Company against The Baldwin Company to cancel the certificates of registration. It appears that a suit was begun in the District Court of the United States for the Southern District of New York by The Baldwin Company against the Howard Company while the cancelation proceedings were pending, which resulted in a decree in favor of The Baldwin Company restraining the Howard Company from making or selling pianos bearing the word "Howard," but permitting it to use the marks "R. S. Howard Company" and "Robert S. Howard Company." (233 Fed., 439.) This decree was affirmed by the Circuit Court of Appeals for the Second Circuit. (238 Fed., 154.)

The Baldwin Company filed in the Patent Office a certified copy of the record in the Federal courts in New York, and in the Patent Office the Examiner of Interferences and the Commissioner of Patents, on appeal to him, held that the adjudication in the New York courts was a bar to the claim of the R. S. Howard Company to cancel the certificates of registration of the trade-mark "Howard," and dismissed the petition of the Howard Company; thereupon, appeal was taken from the decision of the Commissioner to the Court of Appeals of the District. That court reversed the decision of the Commissioner of Patents, and directed the clerk to certify its decision as required by law.

The application in the Patent Office to cancel the trade-marks was under section 13 of the Trade-Mark Act of February 20, 1905, (33 Stat., 728,) which provides:

SEC. 13. That whenever any person shall deem himself injured by the registration of a trade-mark in the Patent Office he may at any time apply to the Commissioner of Patents to cancel the registration thereof. The Commissioner shall refer such application to the Examiner in Charge of Interferences, who is empowered to hear and determine this question and who shall give notice thereof to the registrant. If it appear after a hearing before the Examiner that the registrant was not entitled to the use of the mark at the date of his application for registration thereof, or that the mark is not used by the registrant, or has been abandoned, and the Examiner shall so decide, the Commissioner shall cancel the registration. Appeal may be taken to the Commissioner in person from the decision of Examiner of Interferences.

The appeal from the decision of the Commissioner to the Court of Appeals of the District was under section 9 of the act, which provides:

SEC. 9. That if an applicant for registration of a trade-mark, or a party to an interference as to a trade-mark, or a party who has filed opposition to the registration of a trade-mark, or party to an application for the cancelation of the registration of a trade-mark, is dissatisfied with the decision of the Commissioner of Patents, he may appeal to the Court of Appeals of the District of Columbia, on complying with the conditions required in case of an appeal from the decision of the Commissioner by an applicant for patent, or a party to an interference as to an invention, and the same rules of practice and procedure shall govern in every stage of such proceedings, as far as the same may be applicable.

A motion is made to dismiss the appeal. No specific provision is made for an appeal from the decision of the District of Columbia Court of Ap-

peals reviewing the decision of the Commissioner of Patents, but the decision is to be certified to the Commissioner to govern further proceedings in the case. (Sec. 4914, Rev. Stats.; 8 U. S. Comp. Stats., sec. 9459.)

If the decision of the Court of Appeals of the District of Columbia is not final, then the motion to dismiss the appeal should be sustained, and we have no authority to grant a writ of certiorari. (Judicial Code, secs. 250–251.)

The nature of proceedings of the character now under consideration was considered in *Frasch* v. *Moore*, (211 U. S., 1,) in which the opinion of Chief Justice Alvey, speaking for the Court of Appeals of the District of Columbia in *Rousseau* v. *Brown*, (21 App. D. C., 73, 80,) explaining the nature of this statutory proceeding and affirming that it did not authorize a judgment but only the return by the court of appeals of a certificate to the Commissioner of Patents, to be there entered of record to govern further proceedings in the case, was fully approved.

In *Atkins* v. *Moore* (212 U. S., 285) application for registration of a trade-mark was refused by the Examiner, which action was approved by the Commissioner, and affirmed on appeal by the Court of Appeals of the District of Columbia, an appeal and writ of error were allowed, both of which were dismissed in this Court. The previous decisions of this Court were reviewed by Chief Justice Fuller, speaking for the Court, and in concluding the opinion he said:

> In the light of the various details of the act of February 20, 1905, and of the specific provisions of section 9, we were of opinion (*Gaines* v. *Knecht*, 212 U. S., 561) that proceedings under the act were governed by the same rules of practice and procedure as in the instance of patents, and the writ of error was accordingly dismissed. The same result must follow in the present case.
>
> Under section 4914 of the Revised Statutes no opinion or decision of the court of appeals on appeal from the Commissioner precludes "any person interested from the right to contest the validity of such patent in any court wherein the same may be called in question," and by section 4915 a remedy by bill in equity is given where a patent is refused, and we regard these provisions as applicable in trade-mark cases under section 9 of the act of February 20, 1905.

We are of opinion that the principle there announced controls this case. No provision is made which permits this statutory proceeding to be carried beyond the decision of the Court of Appeals of the District of Columbia, the decision of which court is directed to be certified to the Commissioner of Patents. It is in no sense a final judgment reviewable here upon writ of certiorari or appeal.

It is true that in *Estate of Beckwith* v. *Commissioner of Patents* (252 U. S., 538) this Court allowed a writ of certiorari from a decision of the Court of Appeals of the District of Columbia, affirming a decision of the Commissioner of Patents, in an application to register a trade-mark. No question of the jurisdiction of the Court was considered in that case, and an inadvertent allowance of the writ of certiorari does not establish the jurisdiction of the court. (*Fritch, Inc.*, v. *United States*, 248 U. S., 458, 463.)

It follows that the appeal must be dismissed, and the petition for a writ of certiorari denied.

So ordered.

Supreme Court of the United States.

AMERICAN STEEL FOUNDRIES *v.* WHITEHEAD, COMMISSIONER OF PATENTS.

Decided April 11, 1921.

TRADE-MARKS—APPLICATION TO REGISTER MARK—JURISDICTION OF SUPREME COURT.

On writ of certiorari to the Court of Appeals of the District of Columbia to review a decision involving an application to register a trade-mark, cause dismissed on the ground that the writ was inadvertently issued for reasons set forth in *Baldwin Company* v. *R. S. Howard Co.*, (286 O. G., 865.)

ON WRIT of certiorari to the Court of Appeals of the District of Columbia.

Mr. George L. Wilkinson and *Mr. Nathan Heard* for American Steel Foundries.

The Attorney-General for the Commissioner of Patents.

Mr. Justice DAY delivered the opinion of the Court.

In this case a writ of certiorari was granted by this Court on October 13, 1919. The case involves an application for the registration of a trade-mark, which was refused by the Examiner in the Patent Office, which decision was affirmed by the Commissioner of Patents, and his decision was affirmed by the Court of Appeals of the District of Columbia. (49 App. D. C., 16.) This case is ruled by Nos. 139 and 113, just decided. As the writ of certiorari in this case, for the reasons stated in the opinion in No. 139, was improvidently granted, it follows that the cause must be dismissed for want of jurisdiction, and it is so ordered.

ADJUDICATED PATENTS.

(U. S. D. C. N. J.) Bill for infringement of the Bogenberger patent, No. 897,449, of 1908, for a sash-pivot mechanism used in connection with pivoted fireproof metal windows that are designed to be swung about a pivot in opening and closing, dismissed on the ground that complainant was barred by laches from maintaining his suit. *Yates* v. *Smith et al.*, 271 Fed. Rep., 27.

(U. S. C. C. A. N. J.) The Bogenberger patent, No. 897,449, for a sash-pivoting device, as limited by amendment of the claims in the Patent Office, *Held* not infringed. *Yates* v. *Smith et al.*, 271 Fed. Rep., 33.

(U. S. C. C. A. N. J.) The Pursglove patent, No. 1,021,476, for a wheel-hub for the front wheel of a child's velocipede, *Held* not anticipated, valid, and infringed. *George W. Travers Co.* v. *A. Mecky Co.*, 270 Fed. Rep., 775.

(U. S. C. C. A. N. Y.) The Ward and Taylor patent, No. 1,104,589, for a gear-grinding machine, *Held* to disclose invention not invalid for double patenting or abandonment and infringed by one of defendant's practices. *Gear Grinding Mach. Co.* v. *Studebaker Corporation*, 270 Fed Rep., 934.

(U. S. C. C. A. N. Y.) The Ward patent, No. 1,155,532, for trimming mechanism for grinder-

wheels of shaft-grinding machines, *Held* valid and infringed. *Gear Grinding Mach. Co.* v. *Studebaker Corporation*, 270 Fed. Rep., 934.

(U. S. C. C. A. N. Y.) The Wilt patent, No. 880,058, for improvements in trunks of wardrobe type, *Held* not infringed. *Charles T. Wilt Co. et al.* v. *William Bal Co.*, 271 Fed. Rep., 73.

(U. S. C. C. A. N. Y.) The Wilt patent, No. 1,000,654, for improvements in suspension-fixtures devised for trunks, *Held* void for lack of invention. *Charles T. Wilt Co. et al.* v. *William Bal Co.*, 271 Fed. Rep., 73.

(U. S. D. C. N. Y.) Preliminary injunction against infringement of the Farber design patent, No. 52,985, for a design for a fern-dish, denied on an answer denying that patentee was the originator of the design. *Farber* v. *Forman & Lerner, Inc.*, 271 Fed. Rep., 92.

(U. S. D. C. Ill.) The Newberry patent, No. 851,247, for waterproofing Portland cement by mixing therewith an insoluble salt of a fatty acid and no glycerin or other like water-attractile substance, *Held* valid in the light of its practical use and infringed by a process using a similar substance in a paste form, whereas in the patented process it was generally used in a powdered form, though it originally was a paste and could be made so again. *Medusa Concrete Waterproofing Co.* v. *Ceresit Waterproofing Co. et al.*, 271 Fed. Rep., 122.

(U. S. D. C. Ill.) The Pfeffer design patent, No. 51,559, for a bathing doll, which consisted of decorating a plaster-of-Paris doll of known design with ordinary one-piece bathing-costume, *Held* invalid for want of invention. *Pfeffer et al.* v. *Western Doll Mfg. Co. et al.*, 271 Fed. Rep., 124.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., May 27, 1921.

The United States Phonograph Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Pittsburgh Iron Folding Bed Co., 1106 Reedsdale street, Pittsburgh, Pa.; W. P. Mertens Co., Inc., 107 West Main street, Charlottesville, Va., and the Operaphone Co., Inc., Creek and Meadow streets, New York, N. Y., for registration of trade-marks and trade-mark registered May 6, 1913, No. 91,527, to The United States Phonograph Co., and a notice of such declaration sent by registered mail to said The United States Phonograph Co. at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said The United States Phonograph Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., May 28, 1921.

Matienzo-Sainz Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the applications of John H. Schroeder, 465 Jackson street, Oshkosh, Wis., and The Cleveland Fruit Juice Company, 1394 West Ninth street, Cleveland, Ohio, for registration of trade-marks and trade-mark registered May 21, 1912, No. 86,607, to Matienzo-Sainz Company, 333 North Water street, Newburgh, N. Y., and a notice of such declaration sent by registered mail to said Matienzo-Sainz Company at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Matienzo-Sainz Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., May 28, 1921.

The Weaver Brothers and Mott Company of Baltimore City, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of The Globe Soap Company, Third and Walnut streets, Cincinnati, Ohio, for registration of a trade-mark and trade-mark registered June 5, 1900, No. 34,749, to The Weaver Brothers and Mott Company of Baltimore City, Baltimore, Md., and a notice of such declaration sent by registered mail to said The Weaver Brothers and Mott Company of Baltimore City at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said The Weaver Brothers and Mott Company of Baltimore City, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., May 28, 1921.

The United States Phonograph Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of the Federal Phonograph Co., Inc., 653 West Fifty-First street, New York, N. Y., for registration of a trade-mark and trade-mark registered April 11, 1911, No. 81,488, to The United States Phonograph Co., 235 The Arcade, Cleveland, Ohio, and a notice of such declaration sent by registered mail to said The United States Phonograph Co. at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said The United States Phonograph Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., May 31, 1921.

Godinez-Marshall Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of the General Lamp & Motor Company, Inc., 87 Nassau street, New York, N. Y., for registration of a trade-mark and trade-mark registered December 26, 1911, No. 84,619, to Godinez-Marshall Company, 257 Broadway, New York, N. Y., and a notice of such declaration sent by registered mail to said Godinez-Marshall Company at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Godinez-Marshall Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

Patents Nos. 1,379,602 to 1,380,336.

THE OFFICIAL GAZETTE

OF THE

United States Patent Office.

Vol. 286—No. 5. **TUESDAY, MAY 31, 1921.** **Price—$5 per year.**

[PUBLISHED JUNE 13, 1921.]

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

Interference Notices.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., May 27, 1921.

The United States Phonograph Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Pittsburgh Iron Folding Bed Co., 1106 Reedsdale street, Pittsburgh, Pa.; W. P. Mertens Co., Inc., 107 West Main street, Charlottesville, Va., and the Operaphone Co., Inc., Creek and Meadow streets, New York, N. Y., for registration of trade-marks and trade-mark registered May 6, 1913, No. 91,527, to The United States Phonograph Co., and a notice of such declaration sent by registered mail to said The United States Phonograph Co. at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said The United States Phonograph Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., May 28, 1921.

Matienzo-Sainz Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the applications of John H. Schroeder, 465 Jackson street, Oshkosh, Wis., and The Cleveland Fruit Juice Company, 1304 West Ninth street, Cleveland, Ohio, for registration of trade-marks and trade-mark registered May 21, 1912, No. 86,607, to Matienzo-Sainz Company, 333 North Water street, Newburgh, N. Y., and a notice of such declaration sent by registered mail to said Matienzo-Sainz Company at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Matienzo-Sainz Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., May 28, 1921.

The Weaver Brothers and Mott Company of Baltimore City, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of The Globe Soap Company, Third and Walnut streets, Cincinnati, Ohio, for registration of a trade-mark and trade-mark registered June 5, 1900, No. 34,749, to The Weaver Brothers and Mott Company of Baltimore City, Baltimore, Md., and a notice of such declaration sent by registered mail to said The Weaver Brothers and Mott Company of Baltimore City at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said The Weaver Brothers and Mott Company of Baltimore City, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,

Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., May 31, 1921.

Godinez-Marshall Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of the General Lamp & Motor Company, Inc., 87 Nassau street, New York, N. Y., for registration of a trade-mark and trade-mark registered December 26, 1911, No. 84,619, to Godinez-Marshall Company, 257 Broadway, New York, N. Y., and a notice of such declaration sent by registered mail to said Godinez-Marshall Company at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Godinez-Marshall Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

APPLICATIONS UNDER EXAMINATION.

Condition at Close of Business May 21, 1921.

Room No.	Divisions and subjects of inventions.	Oldest new application and oldest action by applicant awaiting office action.		No. of applications awaiting action.
		New.	Amended.	
314	1. Closure Operators; Fences; Gates; Harrows and Diggers; Plows; Planting; Scattering Unloaders	Jan. 5	Dec. 23	632
128	2. Bee Culture; Dairy; Medicines; Pneumatics; Preserving; Presses; Tents, Canopies, Umbrellas, and Canes; Tobacco; Trees, Plants and Flowers.	Sept. 8	Nov. 3	1,475
175	3. Electric Heating and Rheostats; Electrochemistry; Heating; Metal-Founding; Metallurgical Apparatus; Metallurgy; Metal Treatment; Plastic Metal Working.	Oct. 4	Sept. 29	668
234	4. Conveyers; Conveyers, Fluid-Current; Elevators; Excavating; Handling—Hand and Hoist-Line Implements: Hoisting; Material or Article Handling; Pushing and Pulling Implements; Railway Mail Delivery; Traversing Hoists.	July 16	Feb. 12	1,425
167	5. Book-Making; Books, Strips and Leaves; Harvesters; Jewelry; Manifolding; Music; Printed Matter; Tying Cords or Strands.	Sept. 3	Oct. 14	628
318	6. Bleaching and Dyeing; Chemicals; Explosive, Pyrotechnic and Match Compositions: Fertilizers; Liquid Coating Compositions; Plastic Compositions; Substance Preparation.	Dec. 13	Feb. 26	793
312	7. Games and Toys; Optics; Photography; Velocipedes	Dec. 23	Feb. 7	1,284
131	8. Beds; Chairs and Seats; Flexible-Sheet Securing Devices; Furniture; Kitchen and Table Articles; Store Furniture; Supports.	Feb. 19	Apr. 12	540
221	9. Air and Gas Pumps; Hydraulic Motors; Injectors and Ejectors; Motors, Fluid; Motors, Fluid-Current; Pumps.	Sept. 13	Apr. 8	693
235	10. Land-Vehicles; Land Vehicles, Animal Draft Appliances; Land-Vehicles—Bodies and Tops; Land-Vehicles—Dumping; Land-Vehicles, Wheel Substitutes; Motor Vehicles.	Dec. 6	Feb. 17	979
154	11. Boot and Shoe Making; Boots, Shoes, and Leggings: Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whips and Whip Apparatus.	Feb. 19	Mar. 21	397
222	12. Machine Elements	Oct. 20	Feb. 4	953
329	13. Bolt, Nail, Nut, Rivet, and Screw Making; Chain, Staple, and Horseshoe Making; Driven, Headed, and Screw-Threaded Fastenings Gear Cutting, Milling, and Planing; Metal Drawing; Metal Forging and Welding; Metal Rolling; Metal Tools and Implements, Making; Metal Working; Needle and Pin Making; Turning.	July 16	Feb. 7	1,463
323	14. Compound Tools; Cutting and Punching Sheets and Bars; Farriery; Metal-Bending; Sheet-Metal Ware, Making; Tools; Wire Fabrics and Structure; Wire-Working.	Aug. 25	Apr. 7	835
308	15. Bread, Pastry, and Confection Making; Glass; Laminated Fabrics and Analogous Manufactures; Paper-Making and Fiber Liberation; Plastic Block and Earthenware Apparatus; Plastics.	July 1	Sept. 13	1,524
111	16. Radiant Energy; Telegraphy; Telephony	July 28	Oct. 20	1,403
307	17. Coating, Label Pasting and Paper Hanging; Nut and Bolt Locks; Ornamentation; Paper Manufactures; Printing; Type Casting; Sheet Material Associating or Folding; Sheet Feeding or Delivering; Type Setting.	Dec. 1	Feb. 5	736
229	18. Liquid Heaters and Vaporizers; Motors, Expansible Chamber Type; Power Plants; Speed Responsive Devices; Steam and Vacuum Pumps.	Aug. 13	Dec. 7	1,439
236	19. Automatic Temperature and Humidity Regulation; Furnaces; Heating Systems; Stoves and Furnaces; Domestic Cooking Vessels; Thermostats and Humidostats.	Sept. 13	Dec. 14	781
179	20. Artificial Body Members; Builders' Hardware; Closure-Fasteners; Cutlery; Dentistry; Locks and Latches; Safes; Undertaking.	Jan. 13	Jan. 24	1,000
212	21. Brakes and Gins; Carding; Cloth-Finishing; Continuous-Strip Feeding; Cordage; Felt and Fur; Knitting and Netting; Silk; Spinning; Weaving; Winding and Reeling.	Oct. 20	Mar. 7	457
249	22. Aeronautics; Firearms; Ordnance; Ammunition and Explosive Devices	Jan. 10	Mar. 24	362
217	23. Acoustics; Coin-Handling; Horology; Recorders; Registers; Sound Recording and Reproducing; Time-Controlling Mechanism.	Sept. 20	Feb. 18	741
144	24. Apparel; Apparel Apparatus; Garment Supporters; Sewing-Machines	Oct. 28	Feb. 28	797
315	25. Agitating; Butchering; Centrifugal Bowl Separators; Mills; Threshing; Vegetable Cutters and Crushers; Gas Separation.	Mar. 19	Apr. 7	244
105	26. Electricity, Generation; Motive Power; Prime Mover Dynamo Plants	Oct. 21	Dec. 31	773
214	27. Abrading; Brushing and Scrubbing; Laundry; Washing Apparatus	Jan. 5	Mar. 5	960
225	28. Internal-Combustion Engines	Oct. 29	Jan. 24	1,130
147	29. Boring and Drilling; Button Making; Chucks or Sockets; Coopering; Tool Handle Fastenings; Wheelwright-Machines; Wood-Sawing; Wood-Turning; Woodworking; Woodworking-Tools.	Oct. 23	Mar. 14	630
152	30. Illuminating-Burners; Illumination; Liquid and Gaseous Fuel Burners; Type-Writing Machines	Jan. 3	Apr. 4	861
172	31. Alcohol; Ammonia, Water, and Wood Distillation; Charcoal and Coke; Fuel and Igniting Devices; Gas, Heating and Illuminating; Hides, Skins, and Leather; Hydraulic Cement and Lime; Mineral Oils; Oils, Fats, and Glue; Sugar and Salt.	July 19	Oct. 6	1,845
278	32. Gas and Liquid Contact Apparatus; Heat Exchange; Refrigeration	Aug. 4	Sept. 8	1,088
70	33. Bridges; Hydraulic and Earth Engineering; Masonry and Concrete Structures; Metallic Building Structures; Roads and Pavements; Roofs.	Nov. 20	Feb. 9	681
304	34. Electricity-Transmission to Vehicles; Pneumatic Despatch; Railways; Railway Rolling-Stock; Railway Switches and Signals; Railways, Surface Track; Railway Wheels and Axles; Store Service; Track-Sanders: Vehicle-Fenders.	Apr. 7	Apr. 20	233
57	35. Buckles, Buttons, Clasps, Etc.; Card, Picture, and Sign Exhibiting; Signals and Indicators; Toilet	Apr. 2	Apr. 7	401
204	36. Automatic Weighers; Driers; Geometrical Instruments; Measuring Instruments; Force Measuring	Dec. 14	Dec. 27	1,405
107	37. Electricity, Circuit Makers and Breakers; Electricity, General Applications	Dec. 2	Nov. 29	1,621
378	38. Animal Husbandry; Earth Boring; Fishing; Trapping and Vermin Destroying; Mining, Quarrying, and Ice-Harvesting; Stationery; Stone-Working; Wells.	Jan. 8	Dec. 16	905
220	39. Fluid Pressure Regulators; Joint Packings; Multiple Valves; Packed Shaft or Rod Joints; Pipe Joints or Couplings; Rod Joints or Couplings; Valved Pipe Joints or Couplings; Valves; Water Distribution.	June 28	Sept. 20	1,585
273	40. Baggage; Bottles and Jars; Check-Controlled Apparatus; Cloth, Leather, and Rubber Receptacles; Deposit and Collection Receptacles; Metallic Receptacles; Package and Article Carriers; Paper Receptacles; Special Receptacles and Packages; Wooden Receptacles.	Oct. 28	Jan. 28	1,048
125	41. Land Vehicles, Wheels and Axles; Resilient Tires and Wheels	Oct. 22	Feb. 2	811
114	42. Electricity, Conductors; Electrical Conduits and Housings; Electric Signaling	Sept. 22	Oct. 19	1,844
382	43. Baths and Closets; Dispensing; Dispensing Beverages; Electricity, Medical and Surgical; Fire-Extinguishers; Sewerage; Surgery; Water Separation or Purification.	Aug. 2	Aug. 30	1,200
253	44. Air-Guns, Catapults, and Targets; Ammunition and Explosive Charge Making; Boats and Buoys; Filling and Closing Portable Receptacles; Marine Propulsion; Railway Draft Appliances; Ships.	Oct. 13	Mar. 12	379
379	45. Journal-Boxes, Pulleys, and Shafting; Lubrication; Motors; Spring Devices	Oct. 29	Jan. 26	936
332	46. Curtains, Shades and Screens; Educational Appliances; Fire-Escapes; Ladders; Fluid Sprinkling, Spraying, and Diffusing; Paper Files and Binders; Wooden Buildings; Scaffolds.	Nov. 22	Jan. 26	703
264	47. Brakes; Clutches; Elevator; Fluid Pressure Brake and Analogous Systems	Sept. 28	Dec. 6	1,023

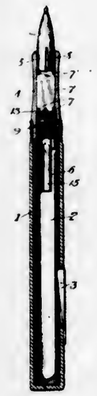
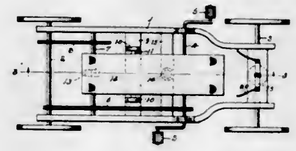
PATENTS



GRANTED MAY 31, 1921.

1,379,602. STYLOGRAPHIC PEN. JULIUS ABEGG, West Hoboken, N. J., assignor to Gordon Pen Company, West New York, N. J., a Corporation of New Jersey. Filed Apr. 19, 1920. Serial No. 375,104. 10 Claims. (Cl. 120—44.)



10. In a stylographic pen, the combination with a pen holder, the end of which is adapted to form a main point section provided with an axial cylindrical bore, a supplemental point section also provided with an axial cylindrical bore adapted to be secured within said main point section, a stylus holder having ink feeding grooves frictionally secured within said supplemental section and definitely positioned with respect thereto and air vent communications between all of said sections.

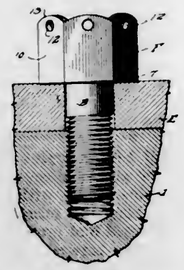
1,379,603. STYLOGRAPHIC PEN. JULIUS ABEGG, West Hoboken, N. J., assignor to Gordon Pen Company, West Hoboken, N. J., a Corporation of New Jersey. Filed June 26, 1920. Serial No. 391,878. 3 Claims. (Cl. 120—44.)

2. A stylographic pen, in combination with a pen holder, of a main point section, a supplemental point section carried thereby, said supplemental point section being provided with a cylindrical bore, a stylus holder positioned partly within the bore of said supplemental point section, that portion of said stylus holder within the bore being substantially flat and of blade-like formation and the part without said section enlarged and provided with ink feeding grooves, an air chamber between the main point section and the supplemental point section, formed by materially reducing the intermediate portion of said supplemental point section, air channels leading from said chambers to the atmosphere, air channels forming communication between the air chamber and the ink reservoir and an air venting aperture connecting the reduced portion of said supplemental point section with the cylindrical bore of said section.

1,379,604. VELOCIPEDE. GEORGE AJOUZ, Detroit, Mich. Filed July 23, 1919. Serial No. 312,723. 5 Claims. (Cl. 208—42.)

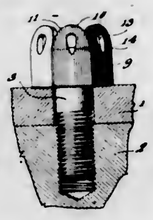
1. In a child's vehicle, the combination of a running gear, and means for propelling the vehicle mounted thereon, of a member pivotally mounted upon the running gear intermediate its ends with the axis of the pivot therefor extending transversely of the vehicle, a cam member mounted on the running gear to engage beneath one end of said pivoted member, and means for turning the cam driven by the driving mechanism for the vehicle.

1,379,605. HAT-HOLDER. JUDGE SHIRLOCK ALLEN, New York, N. Y. Filed Aug. 29, 1919. Serial No. 320,625. 1 Claim. (Cl. 45—13.)



A hat holder, comprising a pair of hooks adapted to be positioned in the under face of an automobile top, and an endless elastic device stretched between the hooks, the two runs of said elastic device adapted to be forcibly spread apart to receive the crown of a hat therebetween when the brim of the hat is located against the automobile top.

1,379,606. LOCKING-SOCKET. CHAUNCEY E. ASHLEY, Syracuse, N. Y. Filed Dec. 26, 1919. Serial No. 347,394. 8 Claims. (Cl. 151—44.)

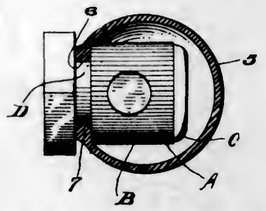


1. As an article of manufacture, a locking socket for polygonal bolt heads or nuts, formed of a single piece of metal providing a perforated base and an integral

polygonal side wall of substantially uniform thickness to embrace, engage and extend beyond the wrench faces of the

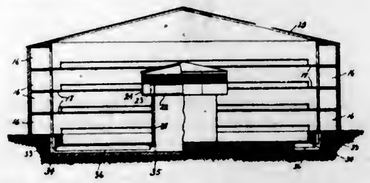
element, that portion of the side wall opposite to said base provided with oppositely disposed transverse apertures.

1,379,607. LOCKING-SOCKET. CHAUNCEY E. ASHLEY, Syracuse, N. Y. Filed June 1, 1920. Serial No. 385,819. 4 Claims. (Cl. 181—44.)



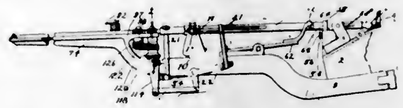
1. In combination with a polygonal head, of a locking socket adapted to fit about the head and having ears extending beyond such head and arranged in convergiug relation whereby to fix the socket to the head and to further act as a guide for a wrench or the like tool.

1,379,608. ERASER AND PENCIL HOLDER. DAVID BAILEY, Salem, Ohio. Filed Oct. 25, 1917. Serial No. 198,532. 2 Claims. (Cl. 120—38.)



1. A device of the class described comprising a barrel internally threaded at one end and slotted at the other, an eraser carrier movably mounted in said barrel having a thumb piece extending through the said slot, and a removable cap on said barrel adapted to receive an eraser, as and for the purposes described.

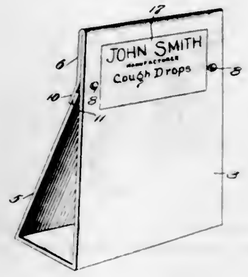
1,379,609. PROTECTOR FOR LUBRICATING-CUPS. WILLIAM B. BARRY, Jr., East Orange, N. J. Filed Oct. 9, 1919. Serial No. 329,589. 2 Claims. (Cl. 184—1.)



2. A protector for lubricating cups comprising a flexible hollow body adapted to fit over a lubricating cup and having an opening in one end through which said cup may be introduced and removed with respect to the hollow body, said hollow body having a resilient bead at the marginal edge of said opening adapted to bind about the stem of the cup for yieldingly holding the flexible body on the cup and for excluding dust and foreign substances from the interior of the body.

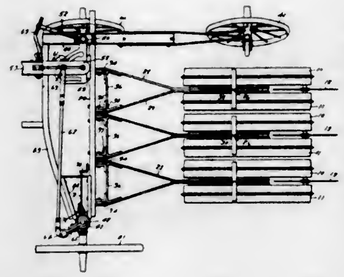
1,379,610. LOCKING SYSTEM. BYRON BARTHOLOMEW, Joliet, Ill. Filed May 5, 1919. Serial No. 294,735. 26 Claims. (Cl. 189—8.)

1. A prison comprising a plurality of cells, a central station from which the interior of each cell is visible, bodily movable mechanical means radiating from the central station and connecting with said cells for simultaneously locking a plurality of said cells.



1,379,611. METHOD OF AND MACHINE FOR MAKING NAILS. ARTHUR BATES, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 5, 1918. Serial No. 248,348. 42 Claims. (Cl. 10—171.)

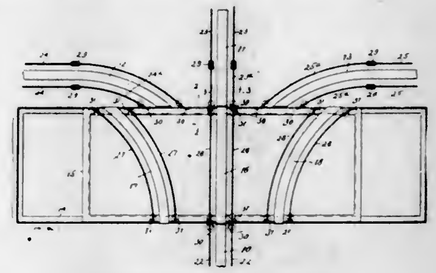
3. The method of feeding nail strips to nail making machines which consists in confining a strip so as to bow the strip, and then relieving the strip from confinement so that the elasticity of the strip straightens the strip and projects its end forward to facilitate the advancing of the strip, and then advancing the strip.



16. In a machine of the class described, means for operating on a nail strip, means for presenting a strip to the operating means, means for confining a plurality of strips so as to bow the strips, a feed roll spaced from said confining means by a distance such as to permit the passage of the end of a strip from the forward side of the group of strips between said feed roll and said confining means, a pivoted plate operable on the rear side of the group of strips for moving an end of the first strip on the forward side of the group of strips into the space between the feed roll and the confining means, and a spring-operated member having a part operatively related to said plate.

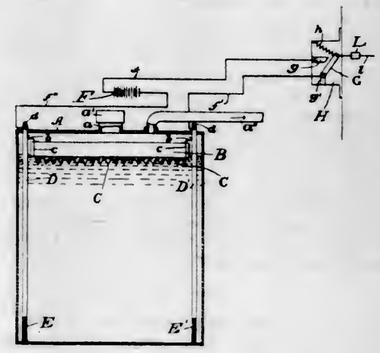
1,379,612. DISPLAY-EASEL. MARTIN E. BAYER, Allentown, Pa. Filed Apr. 3, 1920. Serial No. 370,918. 2 Claims. (Cl. 40—149.)

1. As a new article of manufacture, a display easel formed from a blank sheet of material comprising a display plate having a folded flange formed upon the rear face thereof and near the upper end of said display plate, detachable fasteners for holding said flange in firm engagement with the rear face of said display plate, said fasteners engaging said flange at a distance from the lower edge thereof, said display plate provided with a rearwardly extending base, said rearwardly extending base provided with an upwardly extending forwardly inclined rear brace adapted to fit under said folded flange for bracing said display plate and holding said display easel in an assembled position, and said flange and display plate provided with elongated apertures for receiving said fasteners and holding said fasteners against rotation.



1,379,613. WHEEL-COLTER. LOUIS K. BENEDICT, Hastings, Fla. Filed June 30, 1920. Serial No. 393,074. 6 Claims. (Cl. 97—43.)

1. A wheel colter comprising a draw frame and a plurality of weighted cutting sections in parallel arrangement transversely of the line of draft pivotally connected to the frame independently of each other.

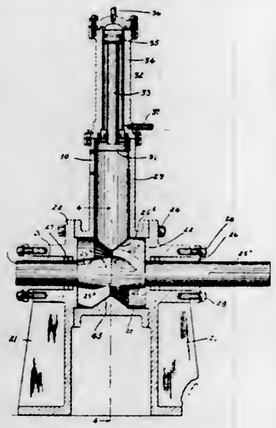


1,379,614. OVERHEAD-CARRIER SYSTEM. EARL T. BENNINGTON, Colonial Heights, Ohio. Filed Oct. 11, 1920. Serial No. 416,149. 10 Claims. (Cl. 191—38.)

1. In a carrier system, a movable switch member having a switch rail, stationary rails on opposite sides of the switch member and adapted to be connected by the switch rail, trolley wires extending along the rails, the trolley wire along the rail on one side of the switch having a section next to the switch normally electrically disconnected from the remainder of the trolley wire, and means whereby said normally electrically disconnected section

of the trolley wire may be supplied with current when the switch is in a position such that the switch rail connects the rails on opposite sides of the switch.

1,379,615. AUTOMATIC FIRE-EXTINGUISHING APPARATUS. WILLIAM G. BOTTOM, Kansas City, Mo. Filed Jan. 13, 1919. Serial No. 270,954. 5 Claims. (Cl. 169—5.)



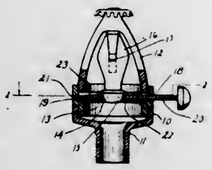
4. An automatic fire-extinguishing apparatus, comprising a receptacle adapted to contain a chemical liquid capable of yielding a non-combustible gas, vertical electric conductors in the receptacle and having insulators at their lower ends, a float carrying an electric heater, contact pieces connecting with the heater and bearing on said conductors, means for supplying current to the heater and means actuated by heat of a fire for turning on the current and a gas discharge pipe leading from the receptacle and connecting with branch pipes leading to a store or stores of combustible material, whereby a smothering gas may be spread in blanket form over said material.

1,379,616. MACHINE FOR TREATING RUBBER AND SIMILAR MATERIAL. DAVID R. BOWEN and CARL F. SCHNUCK, Ansonia, Conn., assignors to Farrel Foundry and Machine Company, Ansonia, Conn., a Corporation of Connecticut. Filed Sept. 14, 1917. Serial No. 191,413. 49 Claims. (Cl. 18—2.)

1. In a machine of the character described, a mixing chamber, and a bladed element in said chamber, said bladed element coöperating with the walls of the chamber to mash the treated material against said chamber walls and to extrude it from one portion of the chamber into another, and back again, alternately.

2. In a rubber masticator, the combination of a working chamber having a constricted portion, and a rotor working in said chamber to force the material from one end portion

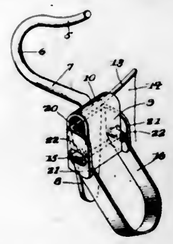
thereof through said constricted portion into the other end portion, and back again.



3. In a rubber masticator, a working chamber constricted at its intermediate portion, and a working element in said chamber extending through said constricted portion of the chamber, and constructed and arranged to extrude the treated material through the constricted portion of the chamber in opposite directions.

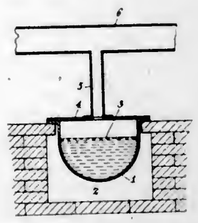
4. In a machine of the character described, a working cylinder having a constriction therein, and a rotor in said cylinder extending through said constriction, and having blades constructed and arranged to force the material alternately from one end portion of the cylinder into the other and back again.

5. In a machine for mixing materials, a mixing chamber, a rotor operable therein, said chamber and rotor provided with coöperating means to cause a mixing extrusion of said materials.



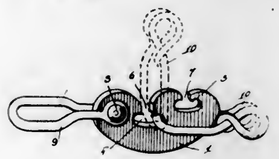
1,379,617. SPRINKLER-HEAD SHUT-OFF. JOHN DAVIDSON, Providence, R. I. Filed Dec. 18, 1919. Serial No. 345,884. 8 Claims. (Cl. 169—37.)

8. A sprinkler-head comprising a body portion having a contracted discharge opening through it, a main closure member therefor, said body being provided with a transverse slot through it and a plate slidably mounted in said slot provided with an opening through which said main closure extends to its seat, said plate being adapted to be moved only after said closure has been removed therefrom.



1,379,618. CLOTHES-WRINGING ATTACHMENT FOR WASHTUBS. CLAUDE B. DAVIS, Richmond, Va. Filed Sept. 22, 1920. Serial No. 412,004. 3 Claims. (Cl. 68—32.)

2. A tub engaging clamp for clothes wringers including spaced arms, and a connecting bight portion, a movable clamping jaw disposed between the arms, a lever under the influence of which the clamping jaw is movable into clamping relation to one of the arms and a single means



carried by the other arm for pivotally connecting the cam lever and slidably connecting the clamping jaw therewith.

1,379,619. FUSION PROCESS. HERBERT H. DOW, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed Aug. 31, 1918. Serial No. 252,225. 11 Claims. (Cl. 266—34.)

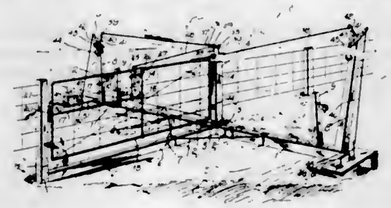
1. In a process involving the fusion together of a mixture of materials of the character described, so as to produce a chemical reaction between said materials the step which consists in blanketing the fushion mixture with flue gases, substantially as described.

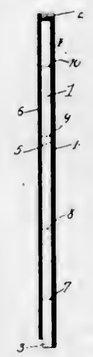
1,379,620. LOCKING-LINK. ARTHUR W. FISHER, Pultneyville, N. Y. Filed Sept. 9, 1919. Serial No. 322,675. 7 Claims. (Cl. 24—230.5.)

4. A locking link comprising a single piece of metal having a hole therein and having a slot cut into one side thereof and forming an entrance thereto, a closed link having one end engaging said hole and the other end spanning the end of the link, the ratio of the length of the closed link and the length and width and shape of the locking link being such that the closed link can be released from the locking link only when it is in an upright position, extending upwardly from the hole.

1,379,621. GATE. BENJIMAN FRANKLIN GOCHENOUR, Maurertown, Va. Filed Apr. 19, 1920. Serial No. 374,955. 1 Claim. (Cl. 39—36.)

The combination with spaced apart posts of a gate panel hinged upon a vertical axis to one of said posts and proportioned to swing between said posts, a latch pivoted to the panel and appropriately pivoted to interlatch with the post opposite the hinging, a plate pivoted to the panel upon an axis approximately in alinement with the pivot of the panel, an arm formed integral with the plate extending in alinement with the panel, a connection from the arm to the latch whereby a rotary movement of the





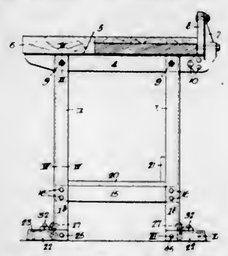


plate lifts the latch to the limit of its verical movement and further rotation of the plate through the medium of the arm and latch connection will rotate the gate in either direction and actuating mechanism disposed at either side of the panel.

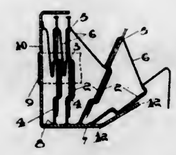
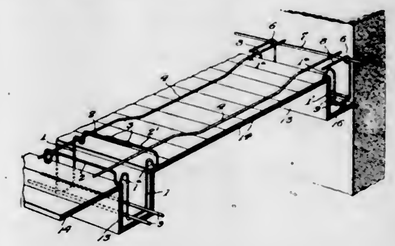
1,379,622. RIM-BOARD. WILLIAM F. GRUPE, North Bergen, N. J., and ALLAN A. ADAMSON, Brooklyn, N. Y. Filed June 17, 1918. Serial No. 240,425. 4 Claims. (Cl. 93—36.)

1. The method of forming a foldable box part comprising providing a strip of paper board; applying finish paper thereto; severing the board strip and finish paper to provide a skived end, the length of the severed finish paper being substantially equal to the perimeter of the box part whereby the severed edge of the finish paper is coincident with one of the severed edges of the skived end of the board strip, and thereafter folding the obtained length of board strip and finish paper applied thereto to cause said skived end to engage the opposite end of said board strip.



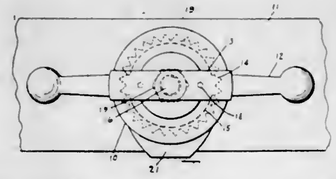
1,379,623. METAL BENCH-LEG. HOWARD T. HALLOWELL, Philadelphia, Pa. Filed Aug. 9, 1919. Serial No. 316,357. 2 Claims. (Cl. 144—286.)

1. A bench leg comprising a channel section having a central web with flanged sides substantially at right angles



to the web, a supporting member horizontally disposed having a depending flange; said leg being slotted for the reception of the flange of said supporting member and having its flanged sides inturned to underlie the horizontal portion of said supporting member, and means for rigidly securing said parts together.

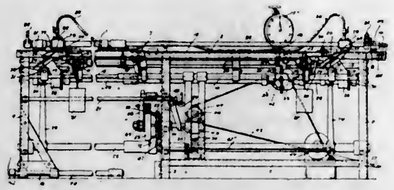
1,379,624. PIN-PACKAGE. THOMAS HARRISON, Weston, Ontario, Canada. Filed Mar. 27, 1920. Serial No. 369,310. 10 Claims. (Cl. 206—66.)



1. A pin package comprising an integral paper strip folded to form a series of double pin holding folds through which pins may be stuck, and also folding hinges extending from the top of each fold to a point adjacent the top of the next fold, said pin holding folds normally lying parallel to one another and in close juxtaposition, with the hinge members doubled on themselves between their folds.

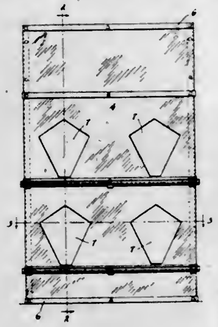
1,379,625. REINFORCED CONCRETE CONSTRUCTION. RUDOLPH B. HARTMAN, Milwaukee, Wis. Filed July 5, 1918. Serial No. 243,462. 4 Claims. (Cl. 72—122.)

1. In reinforced concrete construction, supports for reinforcing rods extending longitudinally through the floor beams or girders, comprising stirrups having a loop portion adapted to extend within a mold-form and provided with outwardly diverging arms adapted to rest upon the form-mold at the side of the beam, and said arms having eyes or loops formed therein to receive connecting rods or reinforcing members.



1,379,626. RADIATOR-CAP. CHARLES C. HIMES, Indianapolis, Ind. Filed Oct. 2, 1920. Serial No. 414,192. 6 Claims. (Cl. 220—39.)

1. The combination with a radiator cap for an automobile having a mounting thereon, of means for adjustably securing said cap to said radiator, whereby said mounting will be properly positioned with respect to said automobile and radiator, including a threaded insert member



adapted to be screwed upon said radiator, and means for rotatably adjusting and securing said insert member within said radiator cap in fixed relation thereto.

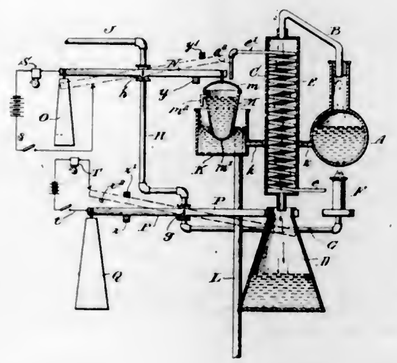
1,379,627. METHOD AND APPARATUS FOR CUTTING PLASTIC MATERIAL. RUDOLPH HOLMES and ADRIAN O. ABBOTT, Jr., Detroit, Mich., assignors to Morgan & Wright, a Corporation of Michigan. Filed Feb. 26, 1920. Serial No. 361,474. 23 Claims. (Cl. 18—2.)

1. In the manufacture of tire treads from plastic rubber composition, shaping the treads to a desired gage, cutting to length slightly longer than desired, and simultaneously beveling their opposite ends substantially in parallelism and to the exact length desired.

1,379,628. NEST-BOX FOR HENS. ARNOLD ISCHE, Norwood, and ALBERT ISCHE, Hamburg, Minn. Filed Dec. 1, 1919. Serial No. 341,724. 5 Claims. (Cl. 119—45.)

1. A nest box for hens having two laterally spaced nests, a nest-supporting bar extending between said two nests, a door opening in the box in front of each nest, said door openings having upwardly diverging sides, and a transverse partition secured to the supporting bar and having upwardly converging edges spaced apart from the front and rear walls of said box.

1,379,629. IGNITION-TIMER. EDWARD B. JACOBSON, Pittsfield, Mass., assignor to J. & B. Manufacturing Company, Pittsfield, Mass., a Corporation of Massachusetts. Original application filed Nov. 8, 1918, Serial No. 261,607. Divided and this application filed Aug. 17, 1920. Serial No. 404,179. 3 Claims. (Cl. 200—19.)

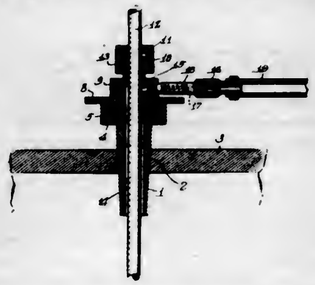


1. An ignition timer having a rotor mounted to rotate upon an axis and having a jaw with openings in its sides, a roller mounted in and arranged to travel with said jaw, and a roller journal having a hardened bearing portion for supporting the roller and having reduced terminal extensions extending into said openings in the jaw, at least one of said terminal extensions and its corresponding opening in the jaw having coöperating peripheral locking means for retaining the roller journal rigid with said jaw.

1,379,630. TEMPLET. HEINRICH JOST, Kreuzlingen, Switzerland, assignor to Emil Rutishauser, Kreuzlingen, Switzerland. Filed Dec. 31, 1918. Serial No. 269,066. 1 Claim. (Cl. 33—5.)

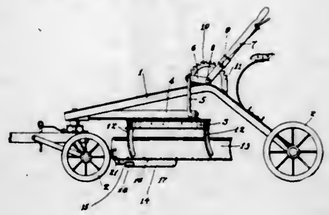
In a templet of the character set forth, in combination, a templet body proper, marking members adapted to be relatively displaceably secured to said templet body, each comprising a triangular base plate, prongs rectangularly extending from said base plate and obtained by bending-over the pointed apexes of said triangular plate, and a marking stud extending centrally from said base plate in a direction opposed to that of said prongs.

1,379,631. WATER-DISTILLING APPARATUS. CHARLES EDMUND KELLS, New Orleans, La. Filed July 26, 1920. Serial No. 398,859. 6 Claims. (Cl. 203—5.)



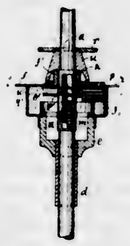
1. A distilling apparatus, comprising a still, a burner for heating it, means for supplying fuel to the burner, a condenser connected with the still, a receiver for distilled water, means for automatically cutting off the fuel supply when the desired amount of distilled water is obtained, and means for actuating a signal when the fuel supply is thus stopped.

1,379,632. TAPPING DEVICE FOR RECEPTACLES. FRANK KIRBY, Flint, Mich. Filed Nov. 7, 1919. Serial No. 336,426. 2 Claims. (Cl. 217—99.)



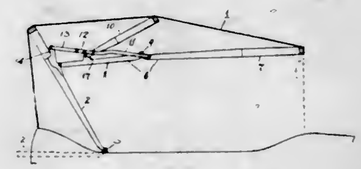
1. A tapping device comprising an exteriorly screw-threaded tapering stem adapted to enter a small hole, an exteriorly screw-threaded head carried by the outer end of said stem and adapted to enter a hole comparatively larger than the hole for said stem, said head and stem

having a bore therein through which is adapted to extend a tube of less diameter than the bore, and a check valve



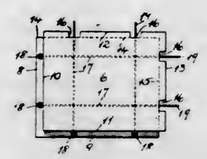
body communicating with the outer end of the bore and adapted to admit a fluid under pressure to said bore.

1,379,633. GRADING APPARATUS. ANDERS H. KOPERUD, Oakland, Calif. Filed Jan. 5, 1920. Serial No. 349,389. 4 Claims. (Cl. 37—7.)



1. An apparatus for excavating a trench at the side of a permanent highway base, the same comprising a vehicle, a blade supporting member rigidly suspended therefrom, means between the blade and vehicle and adapted for operation to permit of angular adjustment relatively to the direction of travel of the vehicle and laterally relatively to the highway base, an excavating member depending rigidly from the lower edge of the blade, guide means associated with the forward end of the member for riding on the side edge of the highway base, and a shoe associated with said member in proximity to said guide means for riding on the surface of the highway base to limit the depth of cut of said member.

1,379,634. SPINDLE FOR DOUBLING AND SPINNING. JOHN KRAINK and FREDERICK KRAINK, Paterson, N. J. Filed Feb. 16, 1920. Serial No. 358,840. 2 Claims. (Cl. 118—49.)



1. In combination, a fixed structure having a gear device, a spindle proper journaled upright in said structure, a flier fixed on the spindle proper, a rotary gear device including a barrel pinion and journaled in the spindle proper on an axis transverse thereto, gearing connecting the two gear devices with each other and journaled in the spindle proper, and a spool supporting member journaled on the spindle proper above the barrel pinion and having teeth on the under side thereof in mesh with said barrel pinion.

1,379,635. TOP FOR VEHICLES AND THE LIKE. FRED K. LEWIS, Ashtabula, Ohio. Filed Mar. 29, 1919. Serial No. 286,123. 5 Claims. (Cl. 296—116.)

1. In a top for vehicles and the like, the combination of a main bow; a two-part articulated auxiliary bow having its rear portion pivotally connected to said main bow; a supplemental bow pivotally connected to such rear portion of said auxiliary bow; a link pivotally attached to said supplemental bow and to said auxiliary bow beyond the joint therein; and a flexible member connecting said link with said main bow.

1,379,636. BUILDING SLAB OR TILE. TIMOTHY LYDON, Baltimore, Md. Filed July 15, 1918. Serial No. 244,691. 2 Claims. (Cl. 72—40.3)

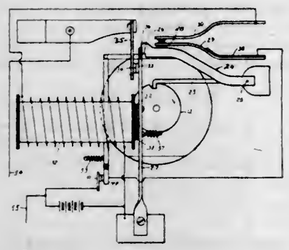
1. A building slab or tile having, at a plurality of sides, edges which project from the outer face and extend laterally beyond the inner face of the tile and also having, at a plurality of other sides, additional edges which project from the inner face and extend laterally beyond the outer face of said tile, whereby to form overlapping and underlapping projecting edges at different sides of the tile and said tile having a notch cut entirely through the edges which project from the inner face and extend beyond the outer face and provided at the inner side of the edges that project beyond the outer face with a projecting loop or eye.

1,379,637. CARTRIDGE-EXPLOSIVE. EDWARD S. MCKINLAY, Denver, Colo. Filed Jan. 16, 1917, Serial No. 142,705. Renewed Oct. 23, 1920. Serial No. 419,073. 4 Claims. (Cl. 102—7.)

1. The herein-described explosive cartridge comprising a main retainer, means for holding within the main retainer two reagents separted from each other but adapted to rapidly produce large volumes of highly explosive gas, means for causing the two reagents to come into contact,

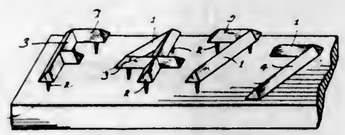
and optionally controllable devices within the main retainer for causing the explosion of the gas after it has been evolved therein and acting independently of the last said means, substantially as set forth.

1,379,638. ADJUSTABLE LIGHT-SUPPORT. FRANK X. MAIER, Sterling, Ill. Filed Feb. 17, 1920. Serial No. 359,222. 2 Claims. (Cl. 248—1.)



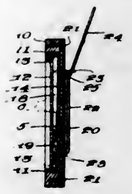
1. A support for electric lights comprising a pair of telescopical engaging members, said members being substantially rectangular in cross section, the hollow member being provided with a longitudinal slot so as to allow the frictional binding of the hollow member upon the surfaces of the other member, a clamp carried by the inner end of the outer member and supported by a lug extending through the longitudinally disposed slot and adapted to be moved longitudinally therein, a clamp carried by the outer end of the outer member, said clamps of the outer member forming means for supporting an electric light and its wires, a universal supporting means for supporting one end of the light support as a whole, and spring actuated friction disks disposed in an aperture of the outer member for frictionally engaging the walls of the inner member.

1,379,639. MANUFACTURE OF ADHESIVES. JAMES DONOVAN MALCOLMSON, Wilkinsburg, Pa., assignor, by mesne assignments, to The Container Club, Chicago, Ill., a Corporation of Delaware. Filed Mar. 14, 1918. Serial No. 222,415. 4 Claims. (Cl. 87—17.)



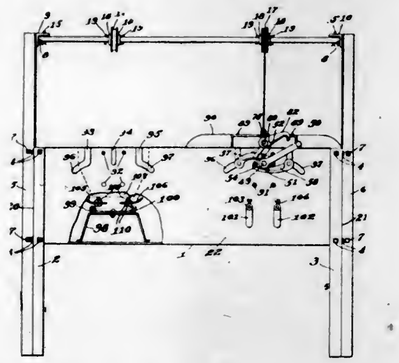
1. The method of increasing the volume of water glass without impairing its adhesive properties, which comprises adding brine to the water glass, and redissolving in the water glass the silica coagulated by the addition of brine; substantially as described.

1,379,640. ELECTRIC-SWITCH LOCK. EDWARD J. MAPLE and CYRIL J. MAPLE, Grafton, Ohio, assignors of one-third to Frank M. Stevens, Elyria, Ohio. Filed Oct. 11, 1919. Serial No. 330,088. 11 Claims. (Cl. 200—45.)



1. In switch locks, a main switch, a magnet for operating said main switch, an auxiliary switch in the circuit of said magnet, a disk having a notch, an arm associated with said auxiliary switch adapted to enter said notch, and means on said main switch adapted to prevent the said arm entering the notch in the open position of the main switch.

1,379,641. PATTERN LETTER AND NUMERAL. HARRY PENCE MAUGHLIN, Columbus, Ohio. Filed Oct. 20, 1917. Serial No. 197,584. 1 Claim. (Cl. 22—195.)



Pattern letters comprising body portions, and at least three points on the under surfaces of said body portions, said points being of such length and so spaced that the letters will stand up without tipping before being forced into the pattern.

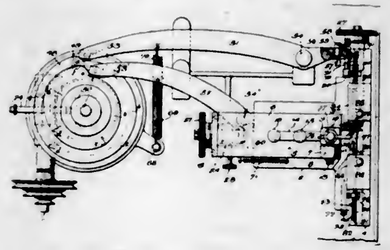
1,379,642. DUPLEX PICTURE. FRED MEEKS, Los Angeles, Calif. Filed Sept. 9, 1920. Serial No. 409,147. 14 Claims. (Cl. 40—61.)

4. A device of the class described comprising a frame, a transparent front panel for the frame, a closure for the back of the frame having a plurality of scenes depicted thereon in reverse positions and paque shiftable finely divided material between said back portion and the panel and adapted to alternately cover one of the scenes.

1,379,643. PASTRY-MAKING MACHINE. JULIUS B. MELTZ, Everett, Mass., assignor to The Everett Machine and Manufacturing Company, Everett, Mass., a Corporation of Massachusetts. Filed June 24, 1919. Serial No. 306,356. 21 Claims. (Cl. 107—66.)

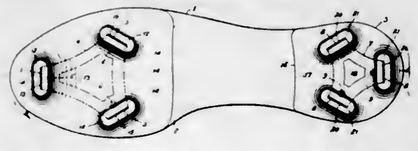
6. In a pastry machine, a mold comprising a flask having a central fixed member and movable members disposed on either side thereof and pivoted thereto, said members each being provided with half mold depressions on their meeting faces, means for simultaneously moving said pivoted members toward and away from said fixed member to close and open said flask, said moving means being constructed and arranged to hold the parts locked in closed position, and a core plate having projecting cores adapted to enter said mold.

10. In a pastry machine, a mold having a flask member, a core plate pivoted thereto, and a device for locking said core plate to said flask member under pressure comprising an eccentric cam pivoted to said core plate, a handle for operating the cam and a locking dog actuated by said cam and adapted to engage a portion of said flask.



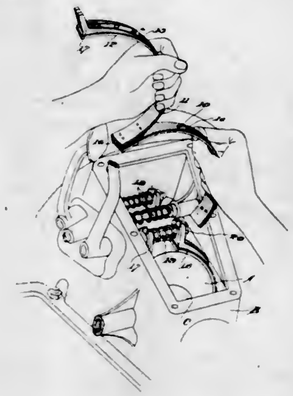
14. In a pastry machine, a frame comprising a sheet metal oven, angle bar supports therefor bolted to said oven at its vertical edges, a heat insulating lining for said oven, a mold removably supported in said oven and a removable cover for closing that side of said oven through which the mold is inserted.

1,379,644. SHUTTER CONSTRUCTION FOR MOTOR-VEHICLE RADIATORS. LUTHER A. MENGES and WARREN W. SIMPSON, Indianapolis, Ind., assignors to La Fayette Motors Company, Indianapolis, Ind., a Corporation. Filed Jan. 23, 1920. Serial No. 353,564. 5 Claims. (Cl. 257—132.)



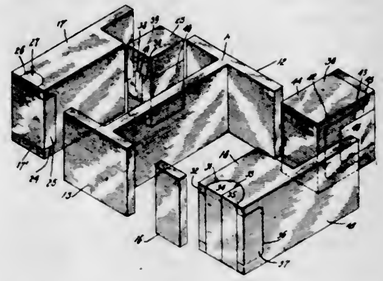
1. In a radiator shutter construction the combination of a radiator shell provided with the usual air opening and spaced from a radiator core adjacent said opening, a shutter frame comprising a plurality of pivoted shutters and means for swinging the same, and adjustable means supporting said shutter frame upon the interior of said radiator shell adjacent the air opening.

1,379,645. STAFF-LATHE. RAYMOND G. MOORE, Utica, N. Y., assignor to The Bassick Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Mar. 8, 1920. Serial No. 364,233. 8 Claims. (Cl. 82—2.)



4. A staff lathe comprising a frame, a work-holding slide movable thereon, head and tail stocks adjustably mounted on the slide to move therewith, and means for moving the slide.

1,379,646. SHOE-SPIKE GUARD. CURT B. MUELLER, West Park, and HERMAN EISELE, Cleveland, Ohio; said Eisele assignor to said Mueller. Filed Dec. 19, 1919. Serial No. 346,157. 21 Claims. (Cl. 36—59.)

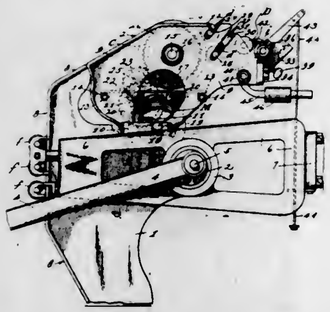


1. A shoe comprising the combination of a tread portion, spikes projecting therefrom, and an auxiliary tread provided with projections adapted to serve as guards each entirely surrounding one of said spikes.

1,379,647. TRANSMISSION-BAND. WILLIAM C. NEWBOLD and GEORGE ED. LENTZ, Cincinnati, Ohio. Filed June 18, 1919. Serial No. 305,025. 2 Claims. (Cl. 188—249.)

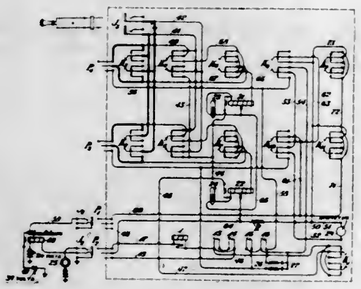
1. A transmission band for use on drums housed in casings, comprising arcuated sections, means for hingedly connecting the sections together to form a complete band, a fixed coupling member on one end of the band, and a removable coupling member on the other end of the band adapted to be removed for threading the band by swinging the sections on one another about the drum and between the same and the casing.

1,379,648. TOY FURNITURE SET. GOTTFRIED NIEBEL, New York, N. Y. Filed Mar. 29, 1920. Serial No. 369,600. 2 Claims. (Cl. 46—35.)



2. A set of toy bed-room furniture, including a bedstead having legs, and two sets of furniture elements, each set being nested to form a quadrangular block, one of said blocks snugly fitting within said bedstead above the bed bottom and the other one below said bed bottom between said legs, the elements of the set when so nested forming a quadrangular priam.

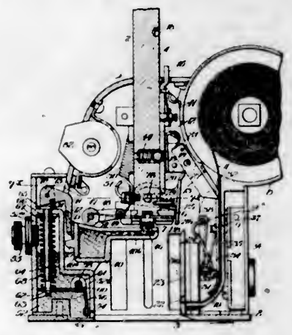
1,379,649. INKING MECHANISM FOR PRINTING-PRESSES. ROBERT S. PHILIP, Los Angeles, Calif. Filed Apr. 26, 1919, Serial No. 294,002. Renewed Apr. 16, 1921. Serial No. 461,918. 2 Claims. (Cl. 101—360.)



1. In a printing press, the combination with the movable bed and form rollers supported thereon, of extensions carried on said bed, an inking cylinder rotatably held between and on said extensions, a driving element supported on said extensions, a reduction gearing train operably connecting said driving element with said cylinder, distributing rollers movably engaging the periphery of said

cylinder, a vibrator roller movably engaging said distributing rollers, an inking mechanism including a roller for

supplying ink to said vibrator roller, and a ductor roller movably disposed intermediate said inking roller and said vibrator roller.

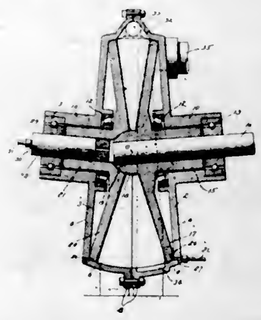


1,379,650. TESTING APPARATUS FOR MESSAGE-REGISTERS. WILLIAM A. RHODES, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed June 27, 1919. Serial No. 307,073. 5 Claims. (Cl. 179—6.3.)

1. A subscriber's telephone line terminating at a jack at a switchboard, message register apparatus associated with said line at said switchboard, apparatus for testing said message register, means for connecting said testing apparatus directly with the jack of said subscriber's line, said testing apparatus including means for completing a circuit for said message register and means for interrupting said circuit a desired number of times, said interrupting device comprising an electro-magnet, an armature, a pawl attached to said armature, a ratchet wheel operated by said pawl, a plurality of cams controlled by said ratchet wheel, and a plurality of spring contacts controlled by said cams, said spring contacts controlling the duration of operation of said interrupting device and controlling said circuit for said message register.

1,379,651. STAMP-AFFIXER. WILLIAM F. SCHWEIGER, Rochester, N. Y., assignor to Multipost Company, Rochester, N. Y., a Corporation of New York. Filed Sept. 26, 1918. Serial No. 255,732. 33 Claims. (Cl. 216—2.)

1. In a stamp affixer, the combination of a casing, a plunger adapted to reciprocate therein, means actuated by the plunger for feeding a stamp, means for pressing the stamp on a surface adapted to receive the same, a plurality of printing types on the plunger adapted to print on the

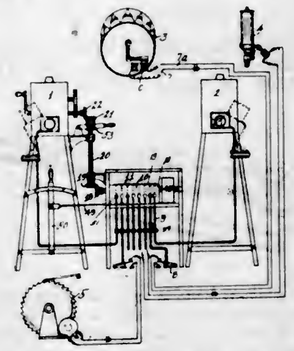


stamp, means for inking said types, and devices controlled by said inking means for moistening said surface.

1,379,652. HOISTING ATTACHMENT FOR AUTO-TRUCKS. JULIUS J. SEIBERT, VICTOR SEIBERT, and WILLIAM SEIBERT, McKeesport, Pa. Filed Sept. 3, 1920. Serial No. 407,847. 1 Claim. (Cl. 298—21.)

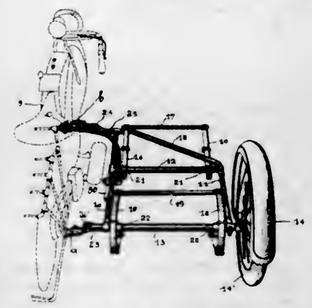
The combination with a truck having an engine of the character specified wherein the fly wheel of the engine is toothed for engagement with a starter, of an oil tight housing inclosing said fly wheel, bearings carried by said housing, a shaft supported for rotation in said bearing and projecting from the interior of said housing to the exterior thereof, a pinion upon said shaft within the housing engaged with the teeth of the fly wheel, a tiltable body, a drum, a cable engaging the drum and the tiltable body and a worm drive between the shaft and said drum.

1,379,653. ROTARY ENGINE. ALVIN H. SHOEMAKER, Oakland, Calif. Filed June 13, 1917, Serial No. 174,768. Renewed Sept. 7, 1920. Serial No. 408,771. 9 Claims. (Cl. 121—69.)



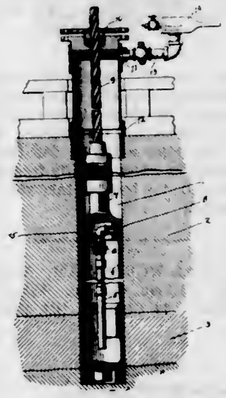
1. A motor of the type described comprising a casing, a pair of revoluble disks mounted in said casing, said disks having angularly disposed axes, intermeshing continuously

contacting abutments on the faces of said disks inclosing expansion cavities, and said casing having an intake orifice and a discharge passage for communicating with said cavities.



7. A motor of the type described, a pair of conical faced revoluble disks having angularly disposed axes and having their apexes meeting in the point of intersection of said axes, intermeshing abutments integrally formed on the faces of said disks, curved faces of said abutments which remain in contact at all points in the revolutions of said disks, a casing inclosing said disks, an intake opening, and an exhaust passageway communicating with said cavities at their points of least and greatest expansion.

1,379,654. STAGE-EFFECT-CONTROLLING DEVICE FOR USE IN CONJUNCTION WITH MOTION-PICTURE MACHINES. FRANK R. SOMMERMEYER, Minneapolis, Minn. Filed Aug. 5, 1916. Serial No. 113,397. 2 Claims. (Cl. 88—16.2.)

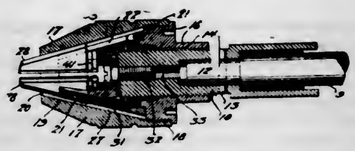


1. The combination of a plurality of stage-effect-producing devices, of a tube for each of the devices, a bellows for each tube controlling the operation of the device, exhaust producing means for exhausting the air from the tube and bellows connected therewith, a tracker board having conduits into which the tubes extend, a perforate strip movable across the tracker board to open the conduits at predetermined intervals to atmosphere, a valve member extending longitudinally of the tracker board having apertures therethrough for each of the conduits of the tracker board adapted to be turned to close or open all of the said tubes, and a valve member for each tube of the tracker board by means of which it may be manually opened to atmosphere.

1,379,655. SIDE-CAR ATTACHMENT FOR MOTORCYCLES. GOTTFRIED STETTLER, Goshen, Ind., assignor to National Dairy Machine Company, Goshen, Ind., a Corporation of Indiana. Filed July 18, 1919. Serial No. 311,758. 17 Claims. (Cl. 208—45.)

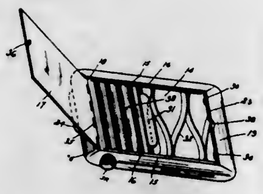
1. The combination with a motor-cycle frame, of a side-car comprising a frame having operative connection with said motor-cycle frame; a connecting member having one end connected with said motor-cycle frame at a point spaced vertically from said side-car frame; and a V-shaped spring interposed between and connecting the opposite end of said connecting member with said side-car frame at a point spaced laterally from the motor-cycle frame.

1,379,656. METHOD FOR PREVENTING CAVING IN WELLS. JOHN C. SWAN, Marietta, Ohio. Filed Sept. 30, 1919. Serial No. 327,564. 4 Claims. (Cl. 166—21.)



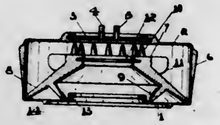
1. The method of preventing caving in drilled or drilling wells which consists in first drying the wall of the well at that portion where caving is likely to occur or has occurred and then applying a protective coating to such dried portion.

1,379,657. METHOD OF EXCLUDING EXTRANEOUS FLUIDS FROM WELLS. JOHN C. SWAN, Marietta, Ohio. Filed Oct. 29, 1919. Serial No. 334,250. 5 Claims. (Cl. 166—21.)



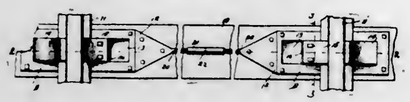
1. The method of preventing the flow of water from a water-bearing stratum, which consists in filling the interstices and crevices of such stratum by forcing thereinto the vapor of a substance which will solidify upon cooling to form a seal against the further entrance of water.

1,379,658. CHUCK. WILFRED E. TAIT and WILLIAM MILNES, Winthrop, Mass. Filed Jan. 20, 1920. Serial No. 352,853. 2 Claims. (Cl. 279—69.)



1. A chuck of the character described including a rotatable stem; a head in longitudinal screw threaded connection with said stem and having a shell secured thereto, said shell having a tapered inner surface; a cup rotatably secured to the inner end of said stem; jaws longitudinally slidable within said shell and transversely slidably connected to said cup, said head having an annular centering flange projecting into said shell; and a hollow frusto-conical retainer having slots therein in which said jaws are positioned, said retainer having a part fitting over said centering flange whereby the retainer is kept in central position but may be readily separated from the head; substantially as described.

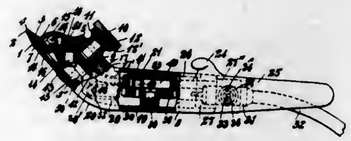
1,379,659. CIGARETTE-CASE. RUSSELL A. TALBOT, Cranston, R. I. Filed Jan. 22, 1920. Serial No. 353,293. 6 Claims. (Cl. 206—41.)



1. A case of the character described comprising a body portion having inturned side edges providing a groove or channel of substantial depth on either side to receive and guide the ends of articles laid transversely therein, means for discharging the articles one by one from the end of the body, and means for automatically feeding the remaining articles forward in the body to take the place of those discharged therefrom.

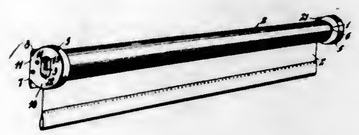
1,379,660. SURGICAL WOUND-DAM. WALTER HERBERT TAYLOR, Guelph, Ontario, Canada. Filed July 8, 1920. Serial No. 394,830. 11 Claims. (Cl. 128—248.)

1. In a wound dam, the combination of a thin annular rubber floor; and a rubber stretching device engaging the upper surface of the floor and adapted to stretch said floor both inwardly and outwardly.



1,379,661. COMBINED RAIL CHAIR AND ANTI-SPREADING DEVICE. WILLIAM J. THEBAULT, Sydney Mines, Nova Scotia, Canada. Filed May 15, 1919. Serial No. 297,442. 1 Claim. (Cl. 238—288.)

A combined rail chair and an antispreading device comprising tie engaging end plates, means for adjusting said plates toward each other, each of said plates having an undercut opening extending longitudinally thereof, a rail clamping element rigidly carried by the plate outwardly of the opening, a second rail clamping element separate from the plate and extending through the opening therein, and having an enlarged lower end portion extending into the undercut portion of the opening to hold the clamping element against upward movement, means for securing the second clamping element to a tie, and means for securing the plate to a tie.



1,379,662. BARBER'S HAIR-CUTTING MACHINE. EPIFANIO V. N. TOMASULO, Cincinnati, Ohio. Filed Oct. 8, 1919. Serial No. 329,308. 13 Claims. (Cl. 30—1.)

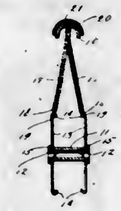
1. In a barber's hair cutting machine, a casing means for leading a revolving shaft into said casing, a lever mounted in the casing, mechanism housed within the casing for converting the revolving motion of the shaft to an oscillating motion of the lever, said casing and lever being bent upwardly at the working end, fixed and movable cutting plates mounted at said turned up portion and

means for fulcruming the lever within said turned up portion on a pivot which extends at an acute angle to the plates, said lever having connection with the movable plate to vibrate the same.

1,379,663. WINDOW-SHADE GUARD. EPIFANIO V. N. TOMASULO, Cincinnati, Ohio. Filed Feb. 4, 1920. Serial No. 356,199. 10 Claims. (Cl. 156—29.)

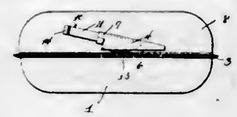
9. In a window-shade guard, a bracket with a base for attachment to the window-frame or jamb, and an outstanding part of cup-like formation, with the open end of the cup toward the shade roller and a part to receive an operative part of the shade-roller in the bottom of the cup, and a cup-like guard-cap with an opening in the bottom of the cup and with the shell of the cup fitting on the shell of the bracket cup-part, said opening allowing the shade-roller to extend through for operative engagement of its operative part in said part of the bracket.

1,379,664. WINDOW-SHADE GUARD. EPIFANIO V. N. TOMASULO, Cincinnati, Ohio. Filed Feb. 19, 1920. Serial No. 359,789. 3 Claims. (Cl. 156—29.)



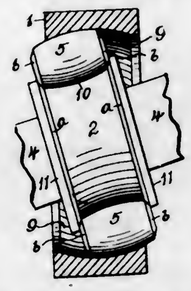
3. In combination with a window-shade, its roller, and the roller bracket, a cup-shaped guard element mounted between the roller and bracket normally free for rotation relatively to the roller and bracket, and extending over the adjacent end of the roller and presenting a shade-edge-conserving surface toward the shade edge, and having a shade-edge-conserving periphery.

1,379,665. SPRING-WHEEL. AMOS WALLACE, Petoskey, Mich. Filed Dec. 11, 1919. Serial No. 344,009. 1 Claim. (Cl. 152—52.)



In a spring wheel the combination with a hub and rim, of a pair of plates secured to the ends of the hub and each

having radiating points terminating in hooks, threaded stems engaged in the rim, threaded stems having eyes

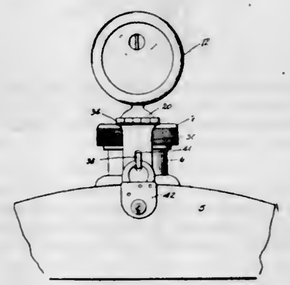


engaged with the hooks of the points, and coil spring spokes having the convolutions of their opposite ends threaded onto the said stems at the rim and at the hub.

1,379,666. CAN-OPENER. OSCAR L. WALLING, Denver, Colo. Filed Sept. 22, 1920. Serial No. 411,929. 4 Claims. (Cl. 220—43.)

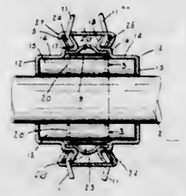
1. In combination with a container having an annular flange and a removable cover, a guide member provided with a channel having an open edge and a closed edge, an opener member comprising a shank extending into the guide member and provided with a cam having its curved edge projecting through the open edge of the channel for engagement with the said annular flange and a finger press to facilitate manual pressure of the cam through the guide member.

1,379,667. UNIVERSAL ROLLER-BEARING. EDGAR P. WEBSTER, Bridgeport, Conn. Filed July 2, 1920. Serial No. 393,622. 1 Claim. (Cl. 64—39.)



In a universal roller bearing, an outer and an inner race ring, each having a track curved in cross section, the inner ring having side flanges, said flanges being each formed with circular seats which taper outwardly so that the tapered seats are divergently related, and rollers between the rings conforming to the curves of the tracks, the ends of the rollers being free of connection with one another and being tapered to conform to the tapered seats and being engaged therewith so that upon tilting of the inner race ring the rollers will move therewith but will not have any sliding action independent of the said inner race ring, the taper of the rollers and of the seats therefor being such so that upon tilting of the inner race ring the pressure exerted by the seats against the roller ends will be in planes substantially radially of the outer track curvature.

1,379,668. PROCESS OF MAKING AMMONIA FROM COMPOUND NITRIDS. GLEN LENARDO WILLIAMS, New York, N. Y., assignor, by mesne assignments, to Henry Walton Campbell, Detroit, Mich. Filed June 26, 1918. Serial No. 241,959. 18 Claims. (Cl. 23—21.)

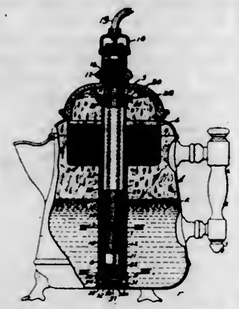


1. The process of producing ammonia which comprises exposing compound aluminum and silicon nitrid to the action of hydrogen at a reacting temperature and in equivalent proportion to yield aluminum and silicon.

1,379,669. MOTOR-METER LOCK. DEWEY E. WILSON, Oakland, Iowa. Filed Oct. 1, 1920. Serial No. 413,965. 4 Claims. (Cl. 70—90.)

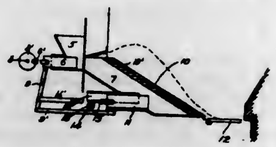
1. The combination with a radiator having a neck and a cap threaded thereon, of a meter connected to the cap, an attaching plate engaged by said meter, a hasp carried by said attaching plate, and a yieldable keeper extending through the neck of said radiator and adapted for connection with said hasp.

1,379,670. ROLLER-BEARING HUB. WILLIAM M. WILSON, Terre Haute, Ind. Filed June 5, 1920. Serial No. 386,698. 10 Claims. (Cl. 64—62.)



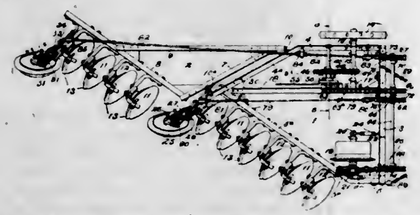
1. A hub construction comprising hub-forming means provided with inwardly extending flange means at the ends of the hub, a plurality of elongated rollers in said hub-forming means, the inwardly extending flange means limiting the longitudinal movement of said rollers in said hub construction, said hub-forming means intermediate the ends of said hub construction forming an annular groove and two adjacent roller bearing surfaces, a spacing means seatable in said annular groove between said roller bearing surfaces, said spacing means securing said rollers in spaced relation within said hub construction.

1,379,671. PERCOLATOR. THEODORE ABTMEYER, Pittsburgh, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Original application filed Mar. 28, 1913, Serial No. 757,354. Divided and this application filed Nov. 10, 1917. Serial No. 201,213. 8 Claims. (Cl. 219—67.)



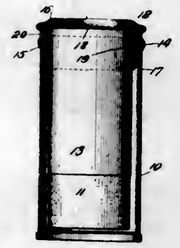
1. An electric heater element comprising an imperforate tubular casing closed at its bottom, a spool of electrical

insulating material in said casing, a resistance conductor wound on said spool and insulated from said casing, an insulating plug secured in the upper end of said casing,



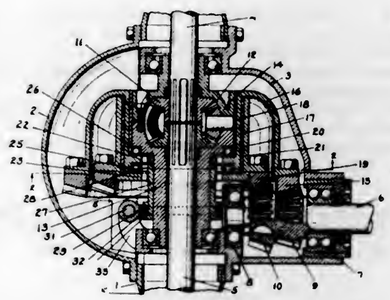
terminal members secured to said plug, means electrically connecting the ends of said resistance conductor to said terminal members, and an imperforate tubular member open at its top and bottom and surrounding said casing.

1,379,672. STOKER. JOHN T. ARNOLD, Attica, N. Y., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 5, 1917. Serial No. 172,928. 13 Claims. (Cl. 110—44.)



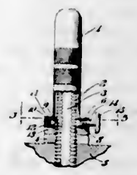
3. In a stoker of the underfeed type, a retort, a fuel impelling plunger operating in said retort for agitating fuel undergoing combustion and having a constant stroke, and means for varying the area of the plunger exposed to the fuel for varying the effectiveness of the plunger.

1,379,673. GANG-PLOW. JOHN B. BARTHOLOMEW, Peoria, Ill., assignor to Avery Company, Peoria, Ill., a Corporation of Illinois. Original application filed May 15, 1913, Serial No. 767,923. Renewed Oct. 12, 1916, Serial No. 125,288. Divided and this application filed May 4, 1917. Serial No. 166,367. 3 Claims. (Cl. 97—67.)



1. In a gang plow, the combination of a frame, a diagonally arranged series of plowing disks rigidly connected to the frame, two wheels for supporting the forward part of the frame, a disk alining furrow wheel adapted to caster and connected with and supporting the rear part of the frame, optionally active means actuated by one of the wheels at the front of the frame, power transmitting devices driven by said means and arranged to first lift the front part of the frame and the front disks of the series and thereafter lift the rear part of the frame and the rear disks of the series, and means for locking said furrow wheel against castering and holding it as a rigid disk alining wheel until the front disks have been raised, and then automatically releasing said wheel and permitting it to caster after the rear disks are raised.

1,379,674. SHAVING-STICK PACKAGE. MARCUS B. BEHRMAN, New York, N. Y., assignor to American Safety Razor Corporation, Brooklyn, N. Y., a Corporation of Virginia. Filed July 31, 1920. Serial No. 400,530. 5 Claims. (Cl. 206—56.)

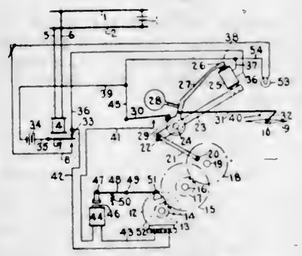


1. A package for a stick of shaving soap comprising a container to inclose the stick and a cup-like holder of elastic material fitting upon the butt end of said stick and serving as a handle for the stick and a stopper for said container while suspending the stick therein.

1,379,675. CHANGEABLE GEAR FOR AUTOMOBILES. CHARLES C. BOOMSLITER, Grand Rapids, Mich., assignor of one-third to Nicholas Kik, Grand Rapids, Mich. Filed May 6, 1920. Serial No. 379,305. 8 Claims. (Cl. 74—59.)

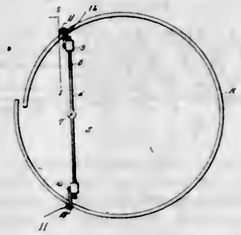
8. In a two-speed axle structure, the combination of a differential driving member constituting a differential casing and provided with a peripheral bearing, a pair of concentrically disposed driven gears mounted on said bearing on said differential driving member and having bearings disposed concentrically of each other, clutch members for said driven gears, a coacting clutch member, on said differential driving member, and a driving shaft provided with driving pinions coacting with said driven gears, all coacting for the purpose specified.

1,379,676. CAP FOR VALVE-STEMS. HENRY BRENNER, New York, N. Y. Filed Nov. 24, 1919. Serial No. 340,345. 2 Claims. (Cl. 152—12.)



1. A cap for valve-stems, consisting of a casing closed at one end and open at the other, a chamber at the open end, such casing and chamber adapted to slide on and off a valve-stem, a sliding washer contained in the chamber having an opening adapted to fit over the valve-stem, a stud on one side of said washer projection through the chamber, and a resilient block in the chamber at the opposite side of the washer adapted to bring the washer into engagement with the valve-stem, when the cap is on the stem.

1,379,677. DISPLAY-LID. EDWARD BRUNHOFF, Cincinnati, Ohio. Filed Dec. 20, 1919. Serial No. 346,412. 1 Claim. (Cl. 220—32.)

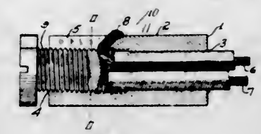


A display lid for vending purposes comprising a cylindrical supporting member beaded at opposite ends to telescopically engage and be supported upon the open end of an original package, a lid comprising a sheet of transparent material having a metallic binding member provided with a hinge member to connect said lid to the exterior of said supporting member, and means to engage the exterior of said supporting member to limit the movement of said lid, said lid in its closed position resting upon the upper edge of said supporting member.

1,379,678. HIGHWAY-CROSSING SIGNAL. STANLEY CHARLES BRYANT, Chicago, Ill. Filed July 20, 1917. Serial No. 181,712. 5 Claims. (Cl. 177—339.)

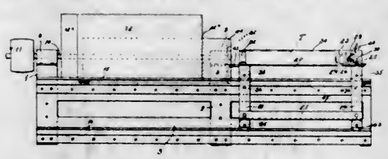
1. In a railway highway crossing signal, in combination: a banner formed with a face of distinctive and arresting appearance and extent and practically an edge of non-distinctive and non-arrestive appearance and of comparatively slight extent; an oscillatable clutch arm having a normal bias; means connecting the clutch arm and the banner whereby when the clutch arm assumes its biased position it will cause the banner to exhibit the face; an oscillatable operating arm; means for clamping together the operating arm and the clutch arm whereby the clutch arm cannot move in response to its bias except by a corresponding movement of the operating arm and means for preventing movement of the operating arm whereby the edge of the banner is exhibited.

1,379,679. RIM-CONTRACTOR. JOE E. BURK, San Bernardino, Calif. Filed Sept. 8, 1919. Serial No. 322,378. 2 Claims. (Cl. 157—1.)



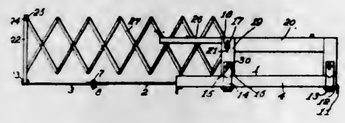
1. A rim contractor comprising a rod having its ends reversely screw threaded, a pair of blocks having screw threaded bores engaging said ends, a sleeve pivotally and detachably connected with each block and a pair of jaw members pivotally connected together by said sleeve.

1,379,680. PROCESS OF MAKING A CEMENTITIOUS COMPOSITION. GEORGE M. FORMBY, Jacksonville, Fla., assignor to Formby Petrinite Corporation, Jacksonville, Fla., a Corporation of Delaware. Filed Mar. 10, 1920. Serial No. 364,736. 4 Claims. (Cl. 106—29.)



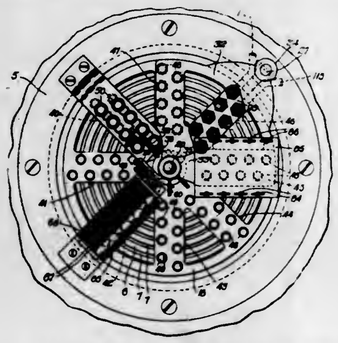
1. The process of producing a cementitious product which consists in providing a mixture of calcium magnesium hydrates; and reacting on said mixture with hydrochloric acid and adding the resulting product to a cementitious composition, substantially as described.

1,379,681. CONNECTOR. GEORGE H. GARCELON, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 3, 1917. Serial No. 146,475. 5 Claims. (Cl. 287—75.)



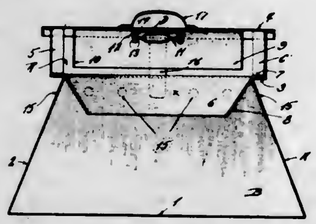
5. A connector comprising a hollow member having a slot in a wall thereof and a sloping shoulder constituting one end of the slot, said slot being longer at its outer edge than at its inner edge, and a member movable in the hollow member to clamp a conductor against said sloping shoulder.

1,379,682. BARREL-STAVE-SAWING MACHINE. RUDOLPH P. GERLACH, Cleveland, Ohio. Filed Sept. 22, 1919. Serial No. 325,320. 7 Claims. (Cl. 143—85.)



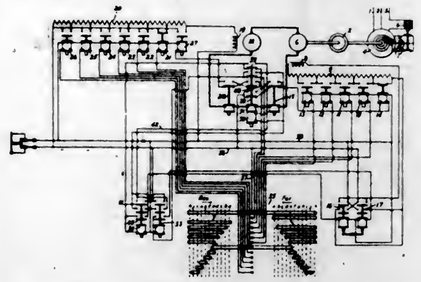
1. In a barrel stave sawing machine, the combination of a drum saw, means for driving the saw, a track comprising a pair of rails disposed one above the other and parallel to the adjacent longitudinal contour of the saw in a plane substantially tangent to the saw and at right angles to the horizontal radius of the saw, and a carriage movable along the track for supporting a piece of timber and delivering it to the saw.

1,379,683. COLLAPSIBLE SEAT OR BED. FRANK RUSSELL GLASENER, Rock Falls, Iowa. Filed July 26, 1920. Serial No. 398,947. 7 Claims. (Cl. 155—44.)



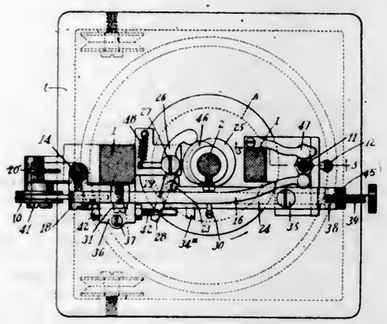
1. In a device of the character described, a base-plate having guideways, an extension therefor movable along said guideways and composed of planar superposed slidingly connected members, and means to secure them in either extended or in collapsed positions.

1,379,684. SOLDERING-MACHINE. JAMES T. GRIFFIN, Oak Park, CARL A. NELSON, Chicago, and MELVIN H. CAMPBELL, Cicero, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 18, 1918. Serial No. 258,724. 5 Claims. (Cl. 113—59.)



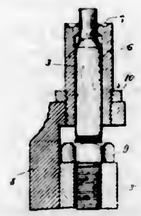
1. In a machine for soldering disks to supports, an intermediate rotatable work carrier having a plurality of sets of work holding openings therein each adapted in the rotative movement of said carrier to be moved into consecutive positions to complete a cycle of operations, a plate associated with said carrier for supporting the disks, means for supplying disks to each set of openings in one position of said carrier, means for supplying solder to said openings in another position thereof, heat applying means adapted to operate upon the supports in a following position of said carrier to melt the solder, means for centering the supports on the disks and ejecting the soldered article from the carrier in the positions of the carrier succeeding the soldering position.

1,379,685. RAT, MOUSE, AND INSECT TRAP. LOUIS HAEGE, New Memphis, Ill. Filed May 20, 1920. Serial No. 383,013. 3 Claims. (Cl. 43—64.)



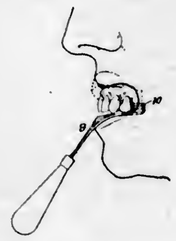
1. In a trap of the character described a lower section comprising a receptacle having side walls which converge toward the top of the receptacle and a continuous top flange extending outwardly at the top of said receptacle, and an upper section comprising a continuous flaring guard flange and a continuous horizontal top flange extending outwardly from the top of said flaring guard flange and seated upon the top flange of said receptacle, said continuous flaring guard flange being arranged within the upper portion of the receptacle to provide slides which extend downwardly from the top flanges, said upper section also including a cover, ribs connecting said cover to the superimposed top flange, a continuous guard flange depending from said cover and located directly above said flaring guard flange, said guard flanges being separated from each other to provide a continuous inlet above said flaring guard flange, and spring latches whereby said upper section is detachably secured to said lower section.

1,379,686. ELECTRICAL SYSTEM. EDWARD A. HANFF, Irwin, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 22, 1916. Serial No. 132,795. 16 Claims. (Cl. 172—239.)



1. In an electrical system, the combination with a motor and a source of current therefor, of a resistor for controlling the voltage of said source, means for normally short-circuiting said resistor, means for automatically breaking said short-circuit when said motor operates as a generator, and means for reëstablishing said short-circuit when the current of said motor rises above a predetermined value.

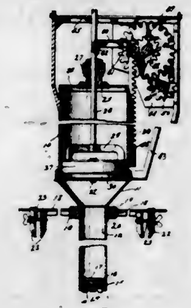
1,379,687. DUPLEX EYELET-MACHINE. FRANK L. HARMON, Beverly, Mass., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed June 12, 1916. Serial No. 103,056. 14 Claims. (Cl. 218—15.)



6. An eyeleting machine, comprising two punch-and-set mechanisms, each mechanism comprising a punch and set telescopically combined, and oppositely mounted in substantial alinement to act simultaneously on two pieces of material, a duplex feed device mounted for vibration closely adjacent one side of the punches and sets of said punch-and-set mechanisms, said device consisting in an intermediate jaw and movable paws coöperative with opposite sides thereof, said movable jaws having means for periodically opening and closing them in the cycle of their vibration toward and from said eyeleting mechanisms.

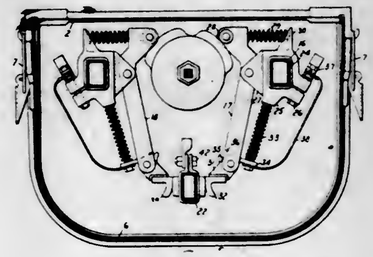
1,379,688. MEANS FOR SETTING EYELETS. FRANK L. HARMON, Beverly, Mass., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed June 24, 1916. Serial No. 105,726. 13 Claims. (Cl. 218—15.)

8. A duplex punch having opposite hollow punch ends each formed with a cutting edge for penetrating and cutting through the materials to be eyeleted and with clenching surfaces therearound, said punch being formed with a passage therethrough between said punch ends, and solid end eyelet carrying anvils slightly larger than and coöperative with the respective punch ends.



1,379,689. SPECIMEN SET-UP FOR ARTIFICIAL TEETH. MILUS M. HOUSE, Indianapolis, Ind., assignor to The Dentists' Supply Company, a Corporation of New York. Filed Oct. 14, 1920. Serial No. 416,897. 15 Claims. (Cl. 35—16.)

1. A specimen set-up for determining tooth and gum characteristics to be incorporated into dentures, consisting of an arch-shaped body having a curved floor and an upward flange to approximately fit the forward part of the ridge of a jaw, said body having secured thereto the anterior teeth alone and terminating at each side with the position of the bicuspids, and also having the labial surface of the upward flange shaped to represent gum characteristics, said body also provided with means whereby it may be temporarily supported in position in the mouth.

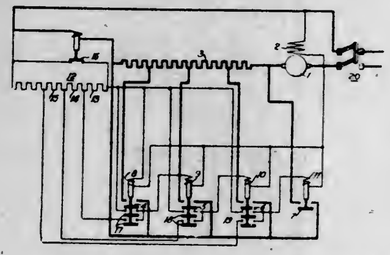


1,379,690. OIL-PUMP. STANLEY R. HUGHES, Benton, and HARRY D. HUGHES, Lytle, Tex. Filed Oct. 18, 1917. Serial No. 197,278. 1 Claim. (Cl. 103—62.)

A pump for attachment to a barrel comprising a cylinder, a frame sustained from the cylinder, a piston in the cylinder having a rod extending exteriorly thereof, a rack bar connected at its upper end with the rod and disposed with its lower end portion in direct slidable contact with the exterior of the cylinder, a pinion supported in the frame, operatively engaged with the rack bar and having a manually operable means for reversely rotating it, a

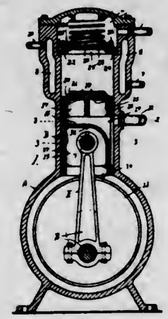
suction tube depending from the cylinder and means carried by the suction tube at the base of the cylinder for engagement with the upper edge of the barrel.

1,379,691. CONTROLLER. HENRY D. JAMES, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 1, 1917. Serial No. 189,390. 10 Claims. (Cl. 200—6.)



1. In a controller, a rotatable shaft, a plurality of cam disks removably mounted on said shaft, a post disposed adjacent to the disks and having contact members mounted thereon, and a plurality of pivotally mounted contact levers disposed on opposite sides of said disks, said levers being operated in pairs by said disks to engage said contact members.

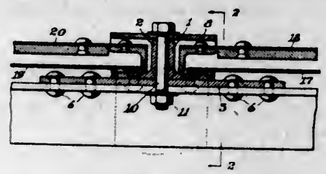
1,379,692. THUMB-BRAKE FOR FISHING-REELS. CHARLES T. PFLUEGER, Akron, Ohio, assignor to The Enterprise Manufacturing Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 6, 1919. Serial No. 336,197. 1 Claim. (Cl. 242—84.5.)



The combination with the frame of a fishing reel and the rotating spool thereof, of a movable brake carried by said frame and adapted to be moved into braking engagement with the exposed surface of said spool, said brake having a rigid backing member which at its ends terminates short of the spool heads, and a braking member of friction material rigidly supported by said backing member and projecting beyond the ends thereof and adapted to be moved into wedging relation between the spool heads.

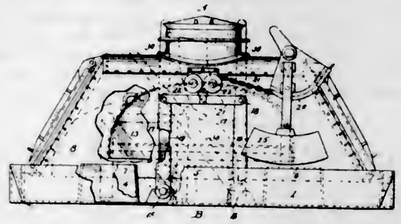
1,379,693. CONTROL SYSTEM. AMOS A. PONSONBY, Scranton, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 9, 1920. Serial No. 402,296. 10 Claims. (Cl. 172—288.)

5. A control system comprising a main circuit, a plurality of switches for controlling said main circuit, a resistor in circuit with the actuating coil for said switches, means responsive to current conditions in said main circuit for shunting the whole of said resistor, and means associated with said switches for shunting portions of said resistor and for establishing energizing circuits for other of said switches.



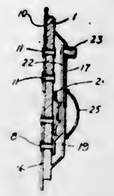
1,379,694. ICE-MACHINE COMPRESSOR. HENRY D. POWNALL, Canton, Ohio. Filed Sept. 28, 1918. Serial No. 256,120. 7 Claims. (Cl. 230—34.)

1. A single-acting compressor comprising a cylinder having an exit-port at one end, a check-valve to control said cylinder-exit-port, a gas-inlet-port through the cylinder side-wall, a piston to reciprocate in said cylinder having a port through its inner end and a channel in its periphery parallel with the piston axis and of approximately the length of the piston stroke, a check-valve to control said piston port, said piston having a packing-ring at its inner end and a packing-ring at its outer end, said channel communicating continuously with said cylinder inlet port and communicating with the compression chamber of the cylinder through said check-valve-controlled port in the inner end of the piston, a wrist-pin located in said piston in a compartment separate from and at one side of said piston channel and located at a point intermediate of said inner and outer piston rings, and means engaging said wrist-pin to drive said piston, whereby a long piston stroke is attainable with a relatively short cylinder.



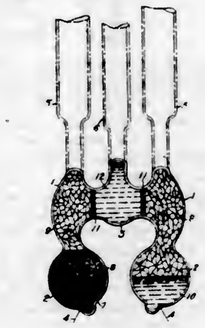
1,379,695. ASH-CART COVER. SAMUEL ROCHLIS, Philadelphia, Pa. Filed Jan. 31, 1919. Serial No. 274,205. 3 Claims. (Cl. 296—101.)

1. In a cart or wagon body top, the combination of a channel member comprising angle irons having vertically positioned flanges arranged in parallel relation and secured together in spaced relation with respect to each other, the other flanges of said angle irons extending horisontally in opposite directions, a plate seated against the upper edges



of the said flanges in parallel relation to the said horizontal flanges of said angle irons, means for detachably securing the said plate to the said angle irons, and cover plates partially supported by the channels formed by the said angle irons and plate.

1,379,696. REVERSING-VALVE MECHANISM. JOHN FRANK ROGERS, Cleveland Heights, Ohio, assignor to The Wellman-Seaver-Morgan Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 23, 1918. Serial No. 218,688. 3 Claims. (Cl. 137—151.)

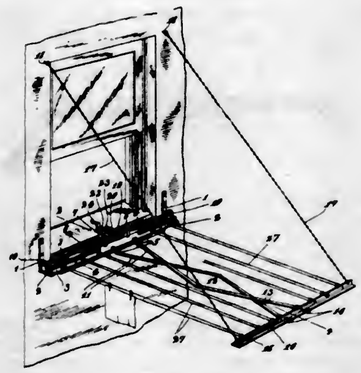


1. The combination of a reversing valve which is movable back and forth through a definite path from one operative position to another, arms which are pivoted at their lower ends and which extend upwardly on opposite sides of the valve, valve supporting means connecting said valve with the upper ends of said arms, a pivoted segment, a chain connected therewith and extending over the periphery of said segment, a sheave over which said chain passes and extends downward, means operatively connecting the depending end of said chain with the described valve mechanism, a radial arm, a weight fixed thereto, said arm being connected with said segment in such position substantially as described that when the valve is substantially at the middle of its path of travel said weighted arm will hang vertically downward.

1,379,697. PORTABLE ELECTRIC LAMP. FRANCIS M. ROSENFELD, New York, N. Y., assignor, by mesne assignments, to Diamond Electric Specialties Corp., Newark, N. J., a Corporation of New Jersey. Filed Dec. 13, 1917. Serial No. 206,908. 1 Claim. (Cl. 200—60.)

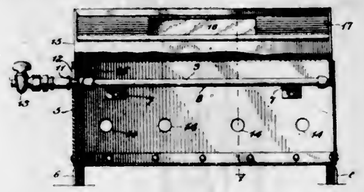
Contact mechanism for battery hand lamps comprising in combination conductors connected to opposed poles of the battery, a pair of spaced contacts at each of the adjacent ends of the conductors, a housing covering said contacts and spaced therefrom, a depressible switch within said housing and having one end engaging a contact of one conductor and the other end overlying and spaced from a contact of the other conductor, and a slidable switch mounted on the housing and adapted to be moved under the depressible switch and into engagement with each of the remaining contacts of said conductors.

1,379,698. STANDARD CELL. CLARENCE J. ROTTMANN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 13, 1919. Serial No. 323,669. 9 Claims. (Cl. 204—33.)



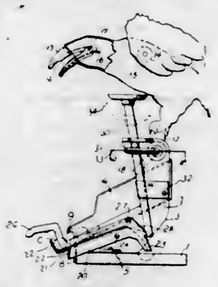
1. In a standard cell a containing vessel of hard glass and leading-in wires of tungsten.

1,379,699. CELLULOSE COMPOSITION. WALTER T. SCHEELE, Hackensack, N. J., assignor to H. Mortimer Specht, New York, N. Y. Filed Oct. 23, 1920. Serial No. 419,108. 25 Claims. (Cl. 23—24.)



1. The process of making acetic cellulose solution, which comprises treating cellulose with a mixed solution of hydrogen peroxid and alkali-metal hydroxid, washing free of alkali and acetylating.

1,379,700. CLOTHES-HANGER. JOHN H. SCHEU, New York, N. Y. Filed May 27, 1920. Serial No. 384,637. 3 Claims. (Cl. 68—3.)



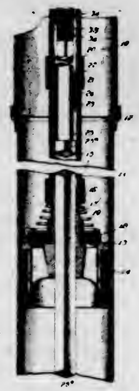
1. A clothes hanger comprising a fixed rail, a rail adapted to be projected away from said fixed rail, and means supporting said fixed rail, and a foldable and extensible framework having slides on its respective inner and outer end members, the slides of the inner end engaging said fixed rail, and the slides of the outer end engaging said movable rail, and means for operating said slides whereby the framework may be folded and extended.

1,379,701. COMBINED GAS HEATING AND COOKING STOVE. ABRAHAM SCHMILOWITZ, Jersey City, N. J. Filed June 22, 1920. Serial No. 390,913. 2 Claims. (Cl. 126—85.)

2. A device of the character described comprising a casing open at its upper end, spaced transverse supporting bars fixed in the upper open end of the casing, a heater element adapted to be removably positioned upon said bars, one end wall of the casing having an opening therein, and the heater element being provided with a nipple to extend through said opening, interchangeable top members adapted to be inserted within the upper end of the casing, and frictionally coacting with the walls thereof, whereby the device may be converted for use either as a heater or cooking range, said members adapted to rest upon the supporting bars for the heater element, and each of said members having a recess in one end wall thereof to receive the nipple of the heater element and hold the latter against transverse shifting movement on the supporting bars.

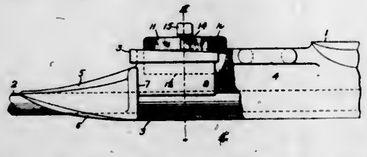
1,379,702. CIGARETTE AND CIGAR DISPENSER AND CONTAINER. DAVID SHAPIRO, New York, N. Y. Filed May 10, 1920. Serial No. 380,213. 2 Claims. (Cl. 211—8.)

1. In a device of the class described, a cigarette container, means for removing one cigarette at a time from said container, said means comprising a pivoted frame having a flat cigarette carrying projection, said frame carrying a bar to operate as a stop for a cigarette when said frame is in its operated position.



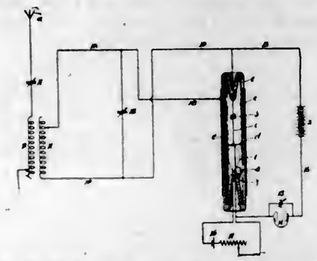
1,379,703. PROCESS OF MAKING EMBOSSED FABRIC. ROSE E. SHINER, Franklin, Mass. Filed Apr. 1, 1920. Serial No. 370,445. 4 Claims. (Cl. 91—67.9.)

2. The herein described process of manufacturing rugs, carpets and the like, which consists in attaching a layer



of fibrous material to a layer of woven material by pricking the fibers of said fibrous material into said woven material; then immersing said fabric in casein, glue or waterglass; then allowing the same to dry; and then passing said fabric between heated rolls under pressure, said rolls having embossed peripheries.

1,379,704. PUMP. JOHN B. SPERRY, Aurora, Ill., assignor to The American Well Works, Aurora, Ill., a Corporation of Illinois. Filed May 17, 1918. Serial No. 235,107. 8 Claims. (Cl. 103—82.)



1. The combination of a pump-cylinder, two reciprocating plungers therein, one above the other, a hollow sectional plunger-rod connected with the upper plunger, a second plunger-rod within the hollow plunger-rod and extending through said upper plunger and connected with the lower plunger, said inner plunger-rod having an angular portion and a cylindrical portion, and two bearings for said inner plunger-rod, one of said bearings being in the upper plunger and the other being supported between two sections of the hollow plunger-rod, one of the bearings being angular and the other cylindrical to correspond to the two different shapes of the said inner plunger-rod.

1,379,705. TROLLEY DEVICE. NILS J. A. WAHLBERG, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 25, 1919. Serial No. 279,039. 8 Claims. (Cl. 191—40.)

1. A trolley-conductor device comprising a body member of channel shape for the reception of the conductor and having outwardly-projecting flanges at its edges, a transverse member rigidly secured in a position spanning one end of the channel member and having its ends extending around said flanges, said transverse member having a slot parallel to the channel, a wedge member disposed in the channel and having a headed projection adapted for insertion through said slot and then to be turned through an angle of substantially ninety degrees to lock it against withdrawal, and an approach member having a portion disposed in the channel between said wedge member and the conductor.

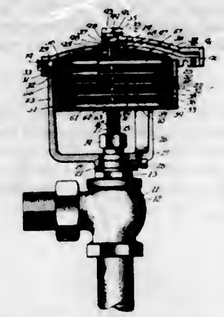
1,379,706. VACUUM-VALVE DETECTOR. ROY ALEXANDER WEAGANT, Roselle, N. J., assignor, by mesne assignments, to Radio Corporation of America, a Corporation of Delaware. Filed Mar. 10, 1917. Serial No. 153,934. 17 Claims. (Cl. 250—27.)

12. As an article of manufacture, a thermionic device having an anode formed with a wire-like portion pointing toward the cathode having its end separated therefrom by a distance relatively small as compared with the average distance between said cathode and anode.

17. A combination of an evacuated vessel having an anode and a hot cathode therein, of an electrostatic control element supported by said vessel in close relationship with the electron stream between said electrodes whereby the value of the thermionic current therebetween may be rapidly varied, means for discharging a charge produced on the interior wall of said vessel when said control element is charged and means whereby said first means is maintained at the same potential as a part of said cathode.

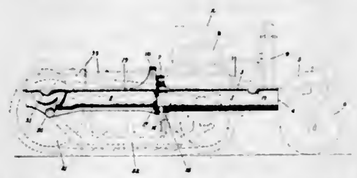
1,379,707. MIXING-MACHINE. EDGAR S. LA CROIX, Duluth, Minn. Filed Sept. 7, 1920. Serial No. 408,659. 1 Claim. (Cl. 259—107.)

A stationary blade for a mixer of the class described having its attached end bent at right angles to its body portion, said bent end having a notched slot therein, and a clip permanently fixed to the walls of the mixer into which the slot in the blade is coöperatively removably engaged, substantially as described.



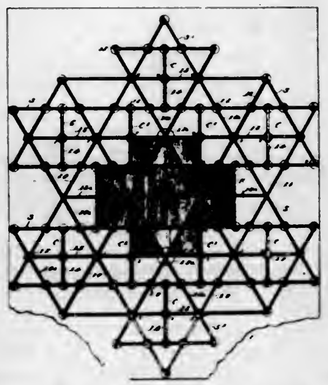
1,379,708. BLOWPIPE. CLAYTON LAING, Chicago, Ill. Filed May 24, 1918. Serial No. 236,390. 23 Claims. (Cl. 158—27.4.)

4. The combination with a blow pipe having a nozzle, of means for supplying air and gas thereto, and controlling means comprising a single controlling element for increasing and decreasing the flow of air and gases through said nozzle synchronously and in proportions variable at will.



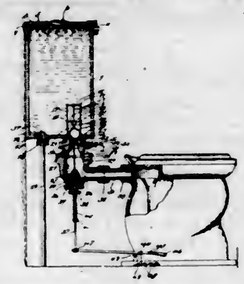
1,379,709. PRESSURE-CONTROLLED DIAPHRAGM DEVICE. JOHN M. LARSON, Chicago, Ill. Substitute for application Serial No. 126,774, filed Oct. 20, 1916. This application filed Dec. 27, 1920. Serial No. 433,392. 8 Claims. (Cl. 236—26.)

1. A diaphragm chamber comprising a plurality of diaphragm cells, each cell comprising a pair of oppositely disposed spring diaphragms, and means for setting up stress in said diaphragms such as to cause adjacent walls



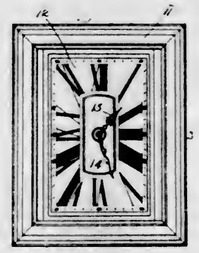
of adjacent cells to exert a substantial pressure on each other, even when the diaphragm chamber is deflated.

1,379,710. BODY CONSTRUCTION FOR TRACTORS. WALTER C. MATTESON, Stockton, Calif. Filed Nov. 25, 1919. Serial No. 340,492. 3 Claims. (Cl. 180—54.)



1. A body construction for tractors comprising a forward cast member adapted to receive an engine thereon, a rear cast unit secured to the forward member and adapted to receive clutch and transmission mechanisms therein, and an upwardly projecting hood attached to the front end of the rear unit and adapted to be secured to the fly wheel casing of an internal combustion engine.

1,379,711. GAME. CYRUS BURTON MULLINS, Jr., Rocky City, Okla. Filed Apr. 7, 1920. Serial No. 371,864. 1 Claim. (Cl. 46—64.)

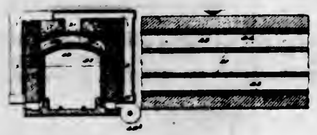


A game comprising a playing board having a plurality of intersecting diagonal lines forming an outer series of six-point stars, said six-point stars forming playing and starting zones, longitudinal and transverse lines within said zones and connecting the diagonal lines of the same, the intersection of the lines of said six-point stars being provided with circles, and playing pieces adapted to be placed upon and moved from circle to circle, the central portion of the board being provided with a crowning zone surrounded by said playing and starting zones.

1,379,712. FLUSH-TANK AND FLUSH-VALVE THEREFOR. WALTER G. MUNKEL, Anamosa, Iowa. Filed Oct. 11, 1919. Serial No. 329,980. 2 Claims. (Cl. 4—5.)

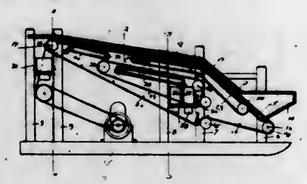
2. The combination with a flushing tank into which flushing water under pressure is adapted to flow, of a bushing having a valve seat threaded into the bottom of the tank, a casing connected to the lower end of the bushing and having connections with a hopper to be flushed, a guide frame rising upwardly from the bushing comprising diametrically oppositely arranged vertical guide rods, a transverse rod having eye connections with certain diametrically opposite guide rods, a spheroidal hollow valve coöperable with said seat, a connector loosely suspended from the transverse rod, and having a loose connection with said valve, whereby the valve may accommodate itself to the seat, when the tank has become empty of the water therein, and means for manually unseating the valve.

1,379,713. WALL-CLOCK. OLOF OHLSON, Newton, Mass., assignor to Waltham Watch Company, Waltham, Mass., a Corporation of Massachusetts. Filed Aug. 16, 1917. Serial No. 186,492. 7 Claims. (Cl. 58—56.)



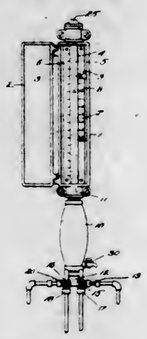
1. A wall clock comprising a frame, a dial mounted in said frame, a time movement mounted on the back of the frame, a winding stem projecting laterally from said movement toward one edge of the frame, and a crown on said stem mounted close to the rear plane of the frame normally within the adjacent edge thereof and having a sliding connection with the stem whereby it may be placed outside of such edge for manipulation.

1,379,714. COOLING MEANS FOR TUNNEL-KILNS. JOHN B. OWENS, Metuchen, N. J. Original application filed July 15, 1918, Serial No. 109,511. Divided and this application filed Aug. 14, 1918. Serial No. 249,826. 3 Claims. (Cl. 25—142.)



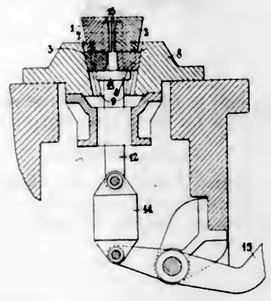
1. A tunnel kiln having a furnace for delivering heat into the interior of its tunnel and provided with a sealed

cooling zone whose side walls are provided with air circulating spaces sealed from the interior of the cooling zone, said spaces being adapted to receive outer air at their lower parts, and to void the air at their upper



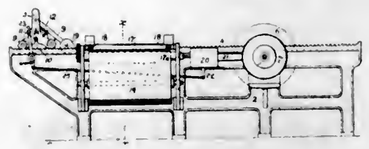
parts, and being arranged and adapted for the upward passage of the outer air for the purpose of cooling the inner tunnel walls and taking off the heat radiated from the ware within the cooling zone without direct entry of air into said cooling zone or direct exit of air therefrom.

1,379,715. VEGETABLE-GRADER. ALLISON H. PARKS, Yakima, Wash. Filed July 7, 1919. Serial No. 309,069. 8 Claims. (Cl. 130—32.)



1. In a grader, an inclined table, a plurality of spaced parallel guide rails mounted thereon, a receptacle mounted below the upper end of the guide rails, a conveyer belt movable above the rails, depending fingers carried by the belt and projecting between the rails to engage the objects to be graded to move the same between the rails, a plurality of belts movable along the table between the guide rails, the latter belts extending toward the upper ends of the guide rails, a shaker table disposed below such belts adapted to receive the objects as the same are moved toward the end of the belts, receptacles disposed below the end of the shaker table adapted to receive the objects, and means for driving the belts and shaker table.

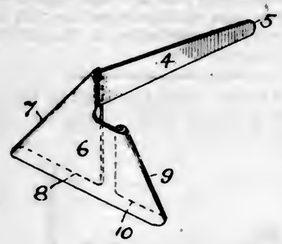
1,379,716. WATER-LEVEL-INDICATOR INSTRUMENT. HARRY S. PARKS, Philadelphia, Pa., assignor to Pneumercator Company, New York, N. Y., a Corporation of Maine. Filed Aug. 28, 1919. Serial No. 320,386. 7 Claims. (Cl. 73—54.)



3. A liquid level indicator, comprising inner and outer indicating tubes in communication at their upper ends and the outer tube being hermetically sealed at its upper end, liquid-containing pipe lines one of which is in connection with the lower end of said inner tube, and a volume chamber connected with the other pipe line and with the bottom of said outer tube and containing a quantity of gas adapted to be displaced into and compressed in said tube under inflow thereto of liquid under pressure.

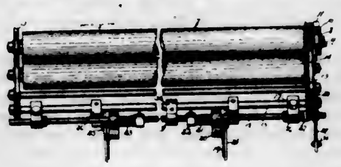
1,379,717. DIE. CHARLES ALGERNON PARSONS, STANLEY SMITH COOK, ALFRED QUINTIN CARNEGIE, JOHN FORD, and MATTHEW BONE, Newcastle-upon-Tyne, England; said Cook, Carnegie, Ford, and Bone, assignors to said Parsons. Filed May 10, 1920. Serial No. 380,363. 14 Claims. (Cl. 207—9.)

1. A die mechanism having a cavity to receive a billet and an orifice leading therefrom through which a portion of the billet may be extruded by drop forging, to form a blade, said die being divided into sections along a plane cutting the said extruding orifice and said cavity, means for moving the die in the general direction of the axis of the cavity and orifice, and for separating the sections in said movement laterally in respect to the axis of the cavity and orifice, substantially as described.



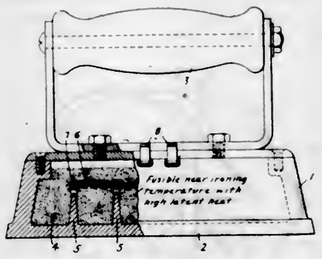
1,379,718. MEANS FOR MAKING TOILET-PAPER ROLLS. PHILIP D. PARSONS, Philadelphia, Pa., assignor to Scott Paper Company, a Corporation of Pennsylvania. Filed Dec. 1, 1919. Serial No. 341,823. 8 Claims. (Cl. 216—1.)

5. In a machine of the character stated, the combination of a plurality of cutters rotating in parallel planes at intervals apart, with means for feeding a wide roll of paper against the said cutters, whereby it is subdivided into a plurality of rolls shorter length, and means arranged in the path of the travel of the roll of paper under the influence of the feeding means for supplying a wrapper to the long roll of paper prior to the action thereon of the cutters.



1,379,719. SUSPENSION DEVICE FOR PAPER PACKAGES AND THE LIKE. PHILIP D. PARSONS, Philadelphia, Pa., assignor to Scott Paper Company, a Corporation of Pennsylvania. Filed Mar. 6, 1920. Serial No. 363,703. 6 Claims. (Cl. 281—15.)

1. A suspension device for paper packages and the like, consisting of an integral sheet material having a body part in which the opposite corners are separately bent over in opposite directions to provide rigid grooved portions converging to form a socket and also having an extended prong part integral with the body intermediate

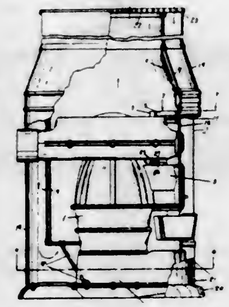


of the grooved portions and bent at right angles to the body part and plane of the socket thereof and extending transversely across said socket.

1,379,720. CUTTER FOR KNITTING-MACHINES. HENRY PAULMAN, Glastonbury, Conn. Filed Nov. 12, 1919. Serial No. 337,570. 12 Claims. (Cl. 164—42.)

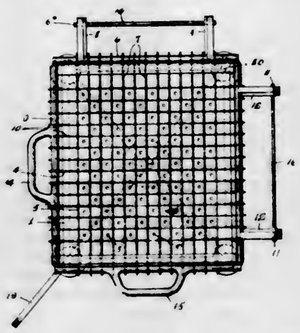
1. In combination with the frame of a fabric forming machine having a take-up roll supported thereon and a stay rod extending across the machine between the side parts thereof, a cutting device attached to said rod and including two blades supported thereby, a blade actuating shaft supported by said rod, one set comprising a plurality of cutting blades being rigidly secured to said shaft, and means for actuating said shaft.

1,379,721. IRONING IMPLEMENT. HARRY A. RAPELYE, Edgewood Park, Pa. Filed Oct. 1, 1919. Serial No. 327,804. 16 Claims. (Cl. 219—25.)



1. In an ironing implement, the combination with means providing an ironing surface, of a body of material disposed adjacent thereto and having a fusing temperature near the desired ironing temperature and a marked latent heat of fusion.

1,379,722. CASE-HARDENING COMPOUND AND METHOD OF USING SAME. DE SOTO E. RICHARDSON, Riverside, Wash. Filed Aug. 13, 1919. Serial No. 317,195. 3 Claims. (Cl. 148—25.)

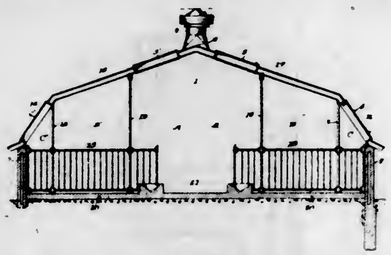


1. A compound for case-hardening consisting of diatomaceous earth, or tufa, common salt, salt peter, and sodium potassium tartrate.

1,379,723. FURNACE. ARTHUR E. RUDOLPHI, Dowagiac, Mich. Filed Feb. 23, 1921. Serial No. 447,153. 16 Claims. (Cl. 126—99.)

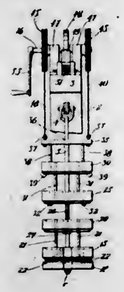
3. The combination with a furnace body having projecting ashpit and combustion passage members, an inner casing frame comprising uprights and a top cross member mounted on said passage members, an inner casing having an opening at the front disposed with the side and top edges of the opening engaging said frame, a front plate mounted on said passage members and an outer casing member secured to said front plate.

1,379,724. VEGETABLE-SLICER. ANNA E. RUSSELL, Syracuse, N. Y. Filed Sept. 23, 1920. Serial No. 412,313. 4 Claims. (Cl. 146—7.)



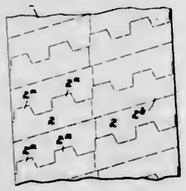
1. A vegetable cutter comprising a table, having a plurality of openings therethrough arranged in rows in two directions at a right angle to each other, a pair of knife frames movable toward and from the table, substantially parallel knives carried thereby, the knives of one frame being arranged at an angle to the knives of the other and the knives of the frames being arranged to pass between the rows of holes on the table, pins movable through the holes of the table, and means for moving the pins vertically, substantially as and for the purpose specified.

1,379,725. STABLE. JOHN G. SHODRON, Fort Atkinson, Wis., assignor to James Manufacturing Company, Fort Atkinson, Wis., a Corporation of Wisconsin. Filed Aug. 30, 1916. Serial No. 117,612. 4 Claims. (Cl. 119—16.)



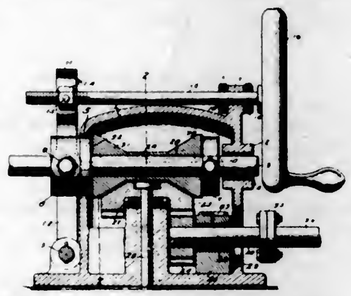
1. A stable, open spaced from floor to roof, and having the roof hipped adjacent to the side walls; that portion of the roof adjacent to the side walls being more steeply inclined than the central portions, and both portions being provided with longitudinally extending series of windows, of which those in the central portion are adjacent to the ridge of the building; said building being disposed at a

sufficient angle to the cardinal points of the compass to allow the direct rays of the sun to reach substantially all



portions of the building in the course of the day, whereby the stable may be kept in a sanitary condition and the health of the animals therein promoted.

1,379,726. SCALE. ANDREW SONANDER, Rutland, Vt., assignor to Howe Scale Company, Rutland, Vt., a Corporation. Filed July 1, 1919. Serial No. 307,973. 3 Claims. (Cl. 265—48.)

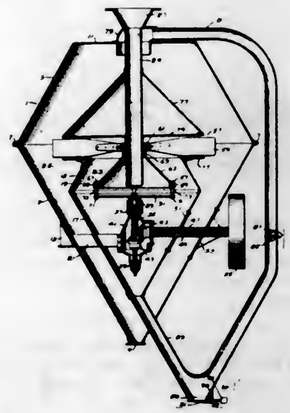


1. In a device of the character described, the combination with a scale beam having a suspended poise rod and pan, a series of counterpoise weights, each formed with a central opening to receive said poise rod and suspension hooks depending from it to engage another weight, and adjustable means for supporting said weights, including a crank shaft, pulleys upon said shaft, cables upon said pulleys connected with said weights and means for holding said shaft against movement.

1,379,727. METHOD OF MAKING ROOFING-SLABS. ALEXANDER S. SPEER, Chicago, Ill., assignor to The Roofing Patents Company, a Corporation of Delaware. Original application filed Apr. 7, 1919, Serial No. 288,035. Patent No. 1,318,238, dated Oct. 7, 1919. Divided and this application filed Sept. 19, 1919. Serial No. 324,952. 5 Claims. (Cl. 164—17.)

1. The method of producing from a prepared roofing strip of materially greater length than width a plurality of units each having along one edge a plurality of projections and spaces consisting in severing said strip in widthwise sections to form a plurality of blanks of the length of two units, the general direction of severance of said blanks being along lines at other than a right angle to the lengthwise edges of the strip and severing the blanks through the middle thereof along a line parallel to the side edges of the strip.

1,379,728. CLUTCH. WILLIAM EDWARD STOY, Juneau, Alaska. Filed May 4, 1920. Serial No. 378,736. 5 Claims. (Cl. 74—26.)

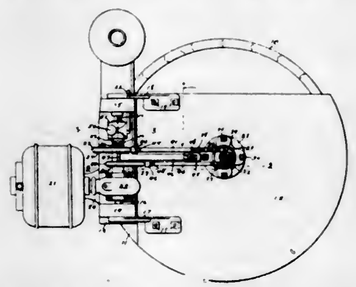


5. A device of the character specified comprising in combination with the drive shaft and the driven shaft, a crown wheel between the shafts, the driven shaft having a pinion meshing with the crown wheel, and the drive shaft having a sleeve feathered thereon and provided at each end with enlargements tapering outwardly from the sleeve, the adjacent face of the crown wheel being beveled to alternately engage the enlarged ends of the sleeve when the sleeve is moved longitudinally, and means for moving the sleeve.

1,379,729. COMPOSITION FOR SOUND-RECORDS. EMILE DE STUBNER, New York, N. Y., assignor to Columbia Graphophone Manufacturing Company, Bridgeport, Conn., a Corporation of Delaware. Filed Dec. 16, 1919. Serial No. 345,335. 9 Claims. (Cl. 106—1.5.)

1. A sound-recording composition comprising candelilla wax and stearic acid in partially saponified solid solution.

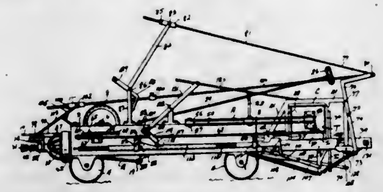
1,379,730. AIR-SEPARATOR. THOMAS J. STURTEVANT, Wellesley, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 16, 1920. Serial No. 358,984. 7 Claims. (Cl. 83—40.)



1. An air separator for grading materials, comprising, in combination, an outer casing, an inner casing therein

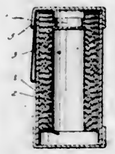
dividing the same into a separating chamber and a collecting chamber, said inner casing positioned a substantial distance from the upper end of the outer casing, a hopper at the top of the casing, a feed tube extending from the hopper down to the separating chamber, a member supported by said tube in spaced relation to the upper end of the separating chamber and coöperating with the upper end of said chamber to form a restricted fan receiving space, a fan rotatable in said restricted space to cause an air current to circulate upward through the separating chamber into the collecting chamber, and a conduit for conducting air from the upper end of the collecting chamber to the lower end of the separating chamber and in an upward direction through said lower end.

1,379,731. MANUFACTURE OF HYDROBROMIC ACID. EUGENE THEIMER, Newark, N. J., assignor to Lowenstein Radio Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Aug. 4, 1919. Serial No. 315,311. 9 Claims. (Cl. 23—1.)



1. In the manufacture of hydrobromic acid, the process which comprises bringing together into reacting relation a relatively concentrated solution of a soluble bromid and a relatively concentrated mineral acid, heating the resultant mixture to distilling temperature, and collecting a distillate consisting of strong aqueous hydrobromic acid containing substantially no free bromin.

1,379,732. ECCENTRIC DRIVING MECHANISM FOR POWER WASHING-MACHINES. HERMAN H. TOLL and FRANK C. DUFF, Clarinda, Iowa. Filed Feb. 23, 1918, Serial No. 218,746. Renewed Oct. 22, 1920. Serial No. 418,764. 10 Claims. (Cl. 74—50.)

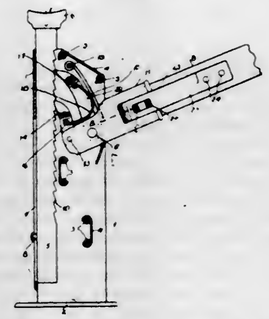


1. A driving mechanism, comprising a support, a driving member journaled on said support and formed with oppositely arranged eccentrics, a bearing plate carried by said support, a housing on said plate, a member mounted for rotary oscillation in said bearing plate and housing, said housing being formed with an opening directed toward said driving member, a flexible connector fixed intermediate of its ends to said oscillatory member and extending through the opening in said housing, and driving connections between the ends of said connector and the respective eccentrics.

1,379,733. BLOCK-MACHINE. JOSEPH VOGT, Richmond, Minn. Filed Apr. 19, 1920. Serial No. 375,061. 30 Claims. (Cl. 25—101.)

1. A block press comprising, in combination, a mold box including a removable top, opposed tamps operating within the box, means for substantially reciprocating said tamps, automatic means operated by said first named means for moving the top into open position, and means operating upon opening movement of the top to render inoperative the means for moving the tamps.

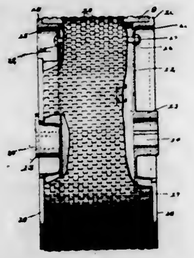
1,379,734. STICKY-FLY-RIBBON COIL. WILLIAM J. WAGNER, Grand Rapids, Mich., assignor to The O. & W. Thum Company, Grand Rapids, Mich. Filed May 23, 1919. Serial No. 299,281. 2 Claims. (Cl. 43—116.)



1. In a sticky fly coil, the combination of a cylindrical container, a coil of ribbon with its outer end secured to the inner wall of the container, a drawing tape secured to the inner end of said coil and a plug disposed and inserted in the top of the coil to force the succeeding layers of the coil into tight contact to seal the contents of the ribbon and prevent hardening.

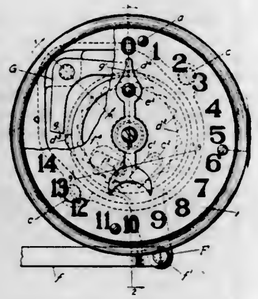
1,379,735. PROCESS OF MAKING GLAUBER'S SALT, TRI-SODIUM PHOSPHATE, AND NEUTRAL SODIUM PHOSPHATE. GEORGE T. WALKER, Minneapolis, Minn., assignor, by mesne assignments, to Colonial Chemical Corporation, Minneapolis, Minn., a Corporation of Minnesota. Filed Apr. 23, 1918. Serial No. 230,230. 2 Claims. (Cl. 23—13.)

1. A process of obtaining Glauber's salt which consists in mixing a solution of sodium bi-sulfate with ground phosphate rock in proportions to produce a solution of acid calcium phosphate and Glauber's salt, adding to such solution sufficient soda ash to render the solution neutral to litmus paper, thereafter filtering the mixture and finally cooling to cause crystallization of the Glauber's salt.



1,379,736. LIFTING-JACK. WALTER SAMUEL WILKINS, Wednesbury, England. Filed Mar. 31, 1920. Serial No. 370,220. 6 Claims. (Cl. 254—110.)

1. A lifting jack comprising a casing containing a vertically movable pillar having a toothed rack along one edge, a pivoted socket to which may be fitted an operating lever, the socket being mounted in the casing and carrying at its inner end an actuating pawl adapted to engage with the rack, a retaining pawl for keeping the pillar stationary when the actuating pawl is out of engagement with the rack, a curved plate spring having its ends attached respectively one to each pawl, means for retaining an operating lever in either of two alternative positions



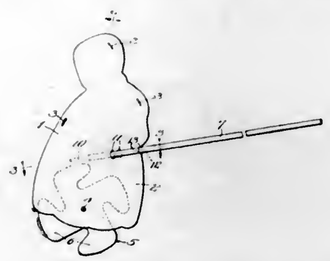
in said socket, in one of which said lever will exert pressure upon said curved spring tending to force both pawls into engagement with the rack, and in the other of which said pressure is removed from the curved spring.

1,379,737. TOOL. ERNST ANHEUSER, Racine, Wis. Filed Dec. 1, 1919. Serial No. 341,569. 4 Claims. (Cl. 29—103.)

1 A tool comprising a one-piece annular tubular member formed from a length of pipe, cutting teeth stuck up from the outer peripheral surface thereof, and a holder for said member.

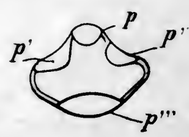
1,379,738. SETTING MECHANISM FOR INDICATING REGISTERS. LINNAEUS E. BAKER, Fort Wayne, Ind., assignor to Wayne Oil Tank and Pump Company, Fort Wayne, Ind., a Corporation of Indiana. Filed Aug. 8, 1918. Serial No. 248,885. 2 Claims. (Cl. 235—132.)

1. In an indicator capable of rotation in one direction only, the combination of a rotatable element and a non rotatable element adapted together to indicate quantity. the rotatable element being driven by the mechanism to which the indicator is attached; a cam on the rotatable element whose receding portion forms two positioning shoulders disposed in opposition to each other; the non-rotatable element constituting resetting means with engagement faces disposed in opposition to each other, one of said faces adapted to be brought into engagement upon rotation of the cam with its opposing shoulder by action of the cam on the non-rotatable element, arresting rotation at the starting point on the indicator, and then to drop into the receding portion of the cam and free said face of said shoulder.



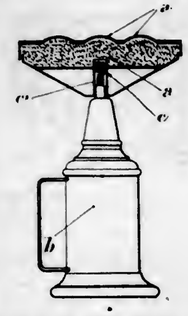
1,379,739. PICTORIAL DEVICE. BEATRICE M. BENNETT, Philadelphia, Pa., assignor to International Art Publishing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 3, 1920. Serial No. 378,492. 2 Claims. (Cl. 40—150.)

1. A display device comprising a display member and an easel therefor consisting of a receptacle open at its top and having upstanding sides and a horizontal bottom, said sides and bottom being permanently secured to each other at their adjoining edges, one of said sides attached to said display member with its plane parallel to the plane of said display member, said sides except the one attached



to said display member, folding into parallelism with said one of said sides, and said bottom folding parallel with said display member, said receptacle both when folded and extended being disposed entirely on one side only of said display member.

1,379,740. TOY. WILLIAM BLEESING, CHARLES F. HOWARD, and SIDNEY A. PEXTON, Chicago, Ill., assignors to Chicago Novelty Co., Chicago, Ill. Filed Nov. 11, 1920. Serial No. 423,255. 5 Claims. (Cl. 46—40.)



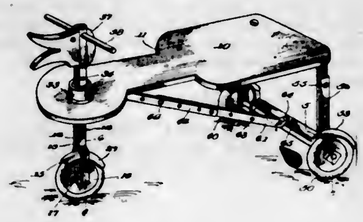
1. A toy comprising two sheets of cardboard or similar material secured together at their edges only, in combination with a handle member bifurcated or split at its attachment end to provide two prongs adapted to straddle the edge portion of the top, and the two sheets of cardboard provided with openings permitting the insertion of the two prongs through the sides of the toy to extend between same.

1,379,741. ARTIFICIAL EYE. BRUNO CAMILLE VICTOR BOURDEAUX, Evreux, France. Filed July 20, 1920. Serial No. 397,622. 3 Claims. (Cl. 3—13.)

1. An artificial eye comprising a front portion formed to present a lower part of regular segmental outline and an upper part of substantially triangular shape with rounded upper summit, the side portions of the triangular part being curved, the major longitudinal axis corresponding substantially to the slit between the closed eyelids.

1,379,742. APPARATUS FOR HEATING BY CATALYSIS. RAMON CAMELL, Rhône, and LAURENT COCHET and JOSEPH GRITTE, Lyon, France, assignors to Societe Lyonnaise Des Richauds Catalytiques, Camell, Cochet, Gritte & Cie., (Societe en Commandate,) Rhône, France. Filed May 26, 1919. Serial No. 299,784. 2 Claims. (Cl. 158—97.)

2. In a catalytic heating apparatus, a catalytic pad, the radiating surface of which is formed with a plurality of bosses, and means for supplying inflammable vapor to said pad.

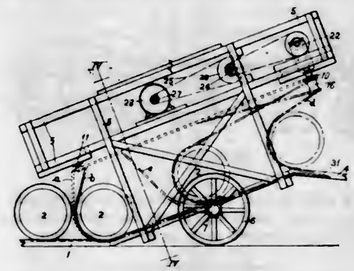


1,379,743. RUBBER-COMPOUNDING MIXTURE. GEORGE J. CHERTOFF, Cleveland, Ohio. Filed Mar. 20, 1918. Serial No. 223,660. 7 Claims. (Cl. 106—23.)

1. A fluid rubber-compounding mixture, consisting of a resinous substance and a relatively non-volatile solvent incorporated in the presence of heat, substantially as set forth.

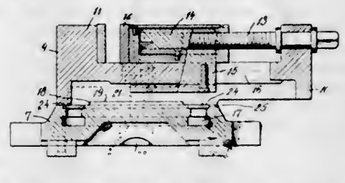
1,379,744. PREPARATION FOR THE TEETH. WILLIAM CONGREVE, Cheltenham, England. Filed Mar. 23, 1920. Serial No. 368,135. 2 Claims. (Cl. 167—9.)

1. A preparation for the teeth consisting of substantially equal proportions of soap and common salt, a larger proportion of sulfur, and a still larger proportion of powdered chalk.



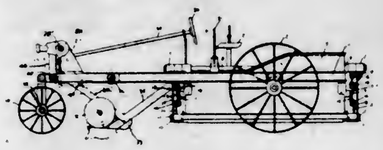
1,379,745. VEHICLE. JAMES P. COUGHLIN, Hastings, Nebr. Filed Feb. 14, 1920. Serial No. 358,723. 13 Claims. (Cl. 208—165.)

1. A vehicle including a body, an axle, a supporting member secured to the body and comprising an arm, a yieldable connecting portion and an upstanding portion secured to said connecting portion and having an opening receiving said axle, and a wheel connected to said axle.



1,379,746. LOADING DEVICE. ALFRED EDWIN CULLEY, Stapenhill, Burton-on-Trent, England. Filed Apr. 29, 1919. Serial No. 293,525. 5 Claims. (Cl. 214—94.)

1. In apparatus for raising casks and the like, in combination; a main frame, a pair of endless driving chains carried on sprocket wheels mounted on the frame and having parallel adjacent portions; means for driving the endless chains; a pair of hauling chains, one end of each of

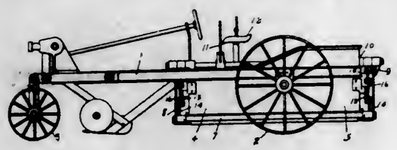


which is fixed to the frame and the other ends of which are attached to corresponding links of the respective driving chains.

1,379,747. VISE. MATTHEW S. CUMNER, New York, N. Y. Filed July 21, 1919. Serial No. 312,406. 7 Claims. (Cl. 81—41.)

1. A rotatably adjustable vise comprising a base provided with an undercut circular slot, a closure for said slot rotatably adjustable on the base, a clamp rotatably mounted on the base over said rotatable closure, and bolts confining said clamp to the base having head portions working in the under-cut slot, said rotatable slot closure having openings for the passage of said bolts therethrough.

1,379,748. ROAD-GRADING MACHINE. ALBERT N. DAYWITT, Frankfort, Ind. Filed Dec. 1, 1919. Serial No. 341,715. 5 Claims. (Cl. 37—32.)

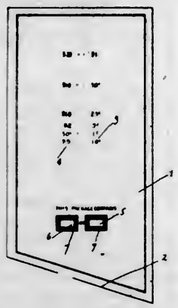


1. A grading machine comprising a frame, a cutting mechanism attached to said frame, a toggle member cooperating with the forward end of said frame and connected with said cutting mechanism, and means for operating the toggle member for raising and lowering the cutting mechanism.

1,379,749. DUMPING MECHANISM FOR ROAD-GRADERS. ALBERT N. DAYWITT, Frankfort, Ind. Original application filed Dec. 1, 1919, Serial No. 341,715. Divided and this application filed Sept. 13, 1920. Serial No. 409,991. 2 Claims. (Cl. 298—31.)

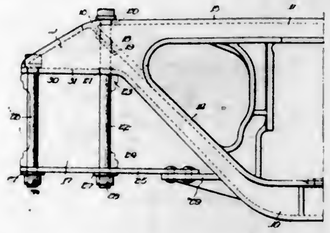
1. The combination with a bed having a discharge opening through the bottom thereof, of a false bottom for closing said opening, brackets having arms supporting said false bottom, a shaft to which said brackets are attached, a pair of toggle levers pivoted together at one end and having their opposite ends pivoted respectively to said

bed and said brackets, links pivotally secured together and having their ends connected respectively with said



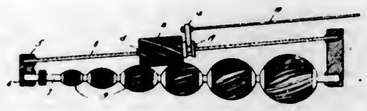
shaft and said levers, and means for rotating said shaft for operating said links and levers for releasing and moving said false bottom to open or closed position.

1,379,750. VISUAL WEATHER-SCREEN. SAMUEL AUGUSTINE DE NORMANVILLE, London, England. Filed June 28, 1920. Serial No. 392,348. 7 Claims. (Cl. 20—40.5.)



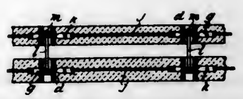
1. A centrifugal visual weather screen comprising a rotary transparent disk, radial flow vanes on said disk, adjacent to the circumference thereof adapted to be driven by the air impinging on the face of said disk and deflected by said vanes tangentially outward.

1,379,751. COIN-WRAPPER. CLEMENT L. DOWNEY, Cincinnati, Ohio. Filed Sept. 25, 1919. Serial No. 326,112. 2 Claims. (Cl. 133—10.)



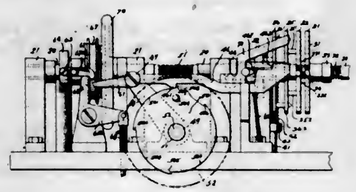
1. A coin wrapper bearing numerals and having an orifice positioned to expose said numerals when the wrapper incloses a roll of coin, said orifice having a border of a color contrasting with the color of the wrapper and with that of the exposed numerals.

1,379,752. SIDE FRAME. GEORGE G. FLOYD, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Apr. 8, 1920. Serial No. 372,220. 4 Claims. (Cl. 105—205.)



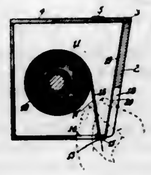
1. In combination, a truck side frame including tension and compression members and a journal box receiving portion cast in a single piece, the tension and compression members being of channel section with the webs thereof at the upper side of each of said members, respectively, and being joined directly to each other at the journal box receiving portions, a journal box, and bolts for securing said journal box to the side frame, one of said bolts passing through openings in the webs of said tension and compression members and said journal box receiving portion.

1,379,753. GEAR-SHIFT. ROBERT F. FORKNER and JOSEPH P. DEHAVEN, Princeton, W. Va. Filed Aug. 10, 1920. Serial No. 402,514. 2 Claims. (Cl. 74—58.)



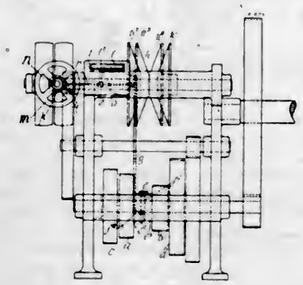
2. In a change speed mechanism, a drive shaft and a driven shaft, a plurality of gear wheels carried by the drive shaft, said gear wheels being oval in formation and having spirally formed teeth on the periphery thereof, a gear wheel splined on the driven shaft, means for moving the last mentioned gear wheel into mesh with a gear wheel of the first mentioned shaft, and means to permit rotation of the first mentioned gear wheels with relation to the drive shaft.

1,379,754. CONCRETE WALL. GEORGE HENRY FORRESTER, Iver, England. Filed Oct. 5, 1920. Serial No. 414,792. 7 Claims. (Cl. 72—48.)



1. A device for use in constructing walls of concrete and the like consisting of a tube and a bar extending transversely through the tube having arms on opposite sides and a bolt receiving hole within the tube, one of said arms being provided outside the tube with a bar receiving hole.

1,379,755. APPARATUS FOR MAKING WINDINGS. CHARLES W. FRANCIS, Paterson, N. J., assignor to Gillespie Motor Company, Paterson, N. J., a Corporation of Delaware. Filed Feb. 3, 1920. Serial No. 356,027. 25 Claims. (Cl. 140—92.2.)

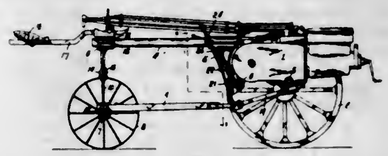


1. In a coil winding machine, a plurality of unitary forms of progressively increasing area, with the smallest form only in operative position, means to rotate the forms and means to move each form as a unit into operative position.

1,379,756. PAPER-DISPENSER. WILLIAM N. FRIEND, Oakland, Calif. Filed Mar. 8, 1920. Serial No. 363,996. 1 Claim. (Cl. 211—31.)

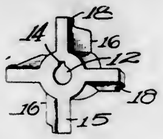
A paper dispenser, a box for containing the paper, the bottom of the box being provided with a slot in its lower wall through which the forward end of the paper extends, a guide for guiding the paper through said slot, the forward wall of the box being provided with a slot, the guide being provided with a slot in alinement with the slot in said forward wall, the slot in the lower wall of the box being provided with a rear enlargement in alinement with said other slots, and a knife edge at the lower edge of the slot in said lower wall.

1,379,757. VARIABLE-SPEED CHANGE-GEAR INDICATOR. JOHN GALLIMORE, Edinburgh, Scotland. Filed Nov. 25, 1919. Serial No. 340,645. 5 Claims. (Cl. 116—116.)



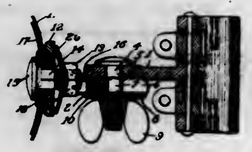
1. Variable speed change gear comprising a toothed change speed gear and a belt pulley change speed gear, speed indicating scales corresponding in number to the speed changes of the toothed gear and adapted to be brought singly into an indicating position, a pointer cooperating with said visible scale, and means whereby said scales are moved to indicate the change in speed of said toothed change speed gear and the pointer to indicate the change in speed of the belt pulley change speed gear separately and simultaneously on one indicating scale consequent upon the operation of each of said gears.

1,379,758. COMBINED BRUSH AND HOLDER. KIMBER A. GEORGE, Philadelphia, Pa. Filed July 2, 1919. Serial No. 308,305. 1 Claim. (Cl. 132—81.)



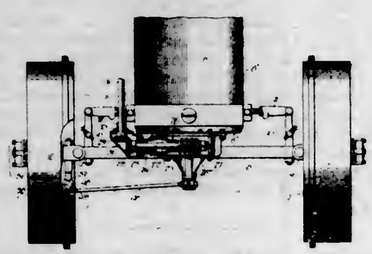
In a device of the character described, the combination with a section, closed at one end by an inwardly projecting integral socket, and having an exterior flange adjacent thereto, with an exterior bead adjacent to the opposite end; of a brush held within said socket; a second section telescopically inclosing the aforesaid section, open at both ends, one of which is reduced in diameter so that the interior thereof is substantially the same diameter as the exterior of that portion of the aforesaid section between the flange and head thereon; a cap closing the open end of the first of said sections; and a container mounted in said cap.

1,379,759. DRAFT APPLIANCE FOR TRACTORS. FRANK H. GERDEMAN, Findlay, Ohio. Filed Jan. 12, 1920. Serial No. 350,839. 4 Claims. (Cl. 180—12.)



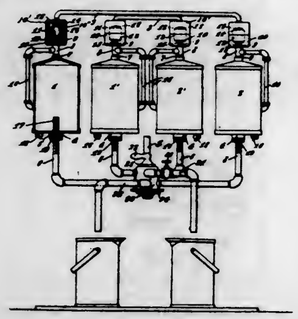
1. The combination with a tractor, of a draft element projecting rearwardly therefrom, an apparatus trailing from the tractor, and a pair of supporting members rising from the apparatus in transversely spaced relation crossing each other and connected in transversely spaced relation at their upper ends to the draft element for movements relative thereto.

1,379,760. GUDGEON. CARL CHESTER HARRIS, Orange, Mass., assignor to Rodney Hunt Machine Company, Orange, Mass., a Corporation of Massachusetts. Filed Nov. 10, 1919. Serial No. 336,951. 8 Claims. (Cl. 64—41.)



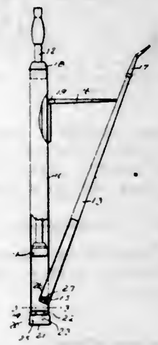
1. As an article of manufacture, a gudgeon having angularly disposed wings for turning the gudgeon as it is driven into the end of a roll.

1,379,761. LAMP-BRACKET. ELLSWORTH A. HAWTHORNE, Bridgeport, Conn. Filed Aug. 4, 1919. Serial No. 315,076. 6 Claims. (Cl. 240—7.)



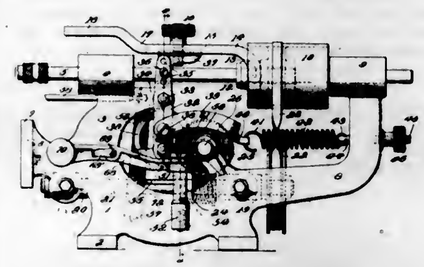
1. A lamp bracket comprising a pair of arms, a bolt connecting said arms for relative rotation, a set nut on said bolt, a retainer clamped by said nut, and a lamp attaching bolt mounted on one of said arms and locked by said retainer.

1,379,762. GUIDING MECHANISM FOR TRACTORS. ROBERT O. HENDRICKSON, Racine, Wis., assignor to J. I. Case Plow Works Company, Racine, Wis., a Corporation of Delaware. Filed May 14, 1920. Serial No. 381,267. 3 Claims. (Cl. 280—96.)



1. In a steering mechanism for tractors and the like, a front axle, a body pivoted thereto upon a horizontal axis, front wheels, knuckles on which the front wheels are journaled, pivoted on vertical axes to the respective ends of the front axle, connections between the knuckles for securing common movement thereof, an arm projecting from one of said knuckles, a longitudinally extending shaft mounted directly above and in the plane of the pivot between the front axle and the body portion of the tractor, an arm on said shaft, a horizontal pin journaled in said arm and substantially in the line of the pivot pin between the axle and the body, a link connecting said pin and the forwardly projecting arm on the knuckle, and means for oscillating said shaft.

1,379,763. LIQUID-MEASURING DEVICE. THOMAS L. HERBERT and MORRIS W. ASKIN, Washington, D. C. Filed Jan. 9, 1920. Serial No. 350,355. 5 Claims. (Cl. 221—116.)

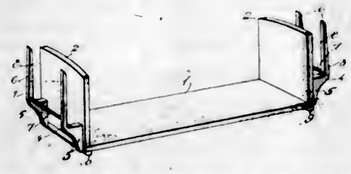


1. In a device of the class described tanks each embodying a part constituting a combined liquid inlet and liquid outlet; an air conduit connecting the tanks; a source of liquid supply; and a valve common to said parts and to the source, the valve operating to connect one of said parts with the source and simultaneously to place the other of said parts in communication with the atmosphere.

1,379,764. PUMP. TOBIAS HOIL, Buffalo, N. Y., assignor to Robert L. Phillips, Atlanta, Ga. Filed Mar. 25, 1920. Serial No. 368,522. 3 Claims. (Cl. 251—127.)

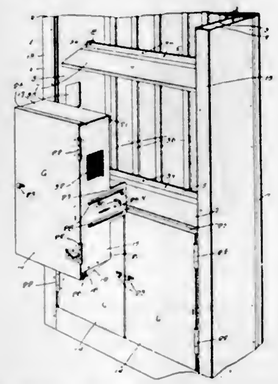
1. In a pump, the combination of a chamber having side walls and an end wall with an opening therein for the passage of liquid, and a valve controlling said opening and consisting of a non-circular disk which rests loosely on said end wall over said opening and a stop which projects from said valve in position to engage said end wall to limit the opening movement of the valve, the side walls of said chamber being so formed as to hold said valve in place over said opening.

1,379,765. AUTOMATIC DRILLING-MACHINE. EDWARD JOSLIN KINGSBURY, Keene, N. H. Filed May 5, 1919. Serial No. 294,891. 30 Claims. (Cl. 77—32.)



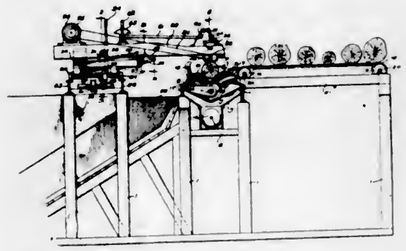
1. A drilling machine comprising a rotating drill spindle, yielding means for feeding the same forward, and automatic means controlled by the rotation of the drill spindle for regulating the maximum feed of said spindle.

4. A drilling machine comprising a rotating drill spindle, yielding means for feeding the same forward, and automatic means controlled by the rotation of the drill spindle for maintaining a uniform maximum feeding of the same when the character of the work being operated upon does not offer sufficient resistance to maintain a consistent or normal feed.



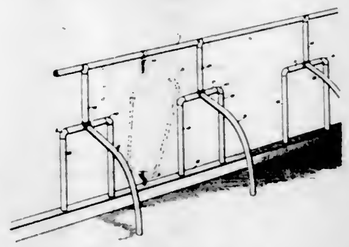
1,379,766. PORTABLE BOOK-HOLDER. JOHN KOBLOS, Chicago, Ill. Filed Apr. 21, 1920. Serial No. 375,616. 1 Claim. (Cl. 45—1.)

A book holder having a basal support for books, uprights at the ends of said support for maintaining the books in vertical positions, an open-top rack associated with one of said uprights and comprising spaced brackets



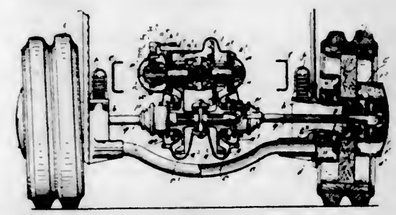
having free upper ends terminating at substantially the top of the book holder, and a cross bar uniting said brackets and constituting a handle for the book holder.

1,379,767. SWITCH MECHANISM. HUBERT F. KRANTZ, Brooklyn, N. Y., assignor to Krantz Manufacturing Company, Inc., Brooklyn, N. Y., a Corporation of New York. Original application filed Dec. 26, 1917, Serial No. 208,799. Divided and this application filed Feb. 11, 1919. Serial No. 276,349. 7 Claims. (Cl. 175—300.)



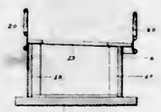
1. In a switch board structure, a removable switch unit made up as a container, having a front wall, top and bottom walls and opposite side walls, and portions of said opposite side walls being extended laterally beyond the front wall whereby to constitute a mounting for mechanisms exteriorly of the container.

1,379,768. LOG-PEELER. JULIUS NICHOLAS LARSON, Dexter, Mich. Filed July 24, 1920. Serial No. 398,780. 4 Claims. (Cl. 144—208.)



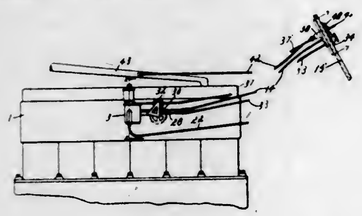
1. In a log peeler, the combination of means for supporting and rotating a log, a reciprocating carriage, adjustable supporting means carried by the carriage and cutting mechanism mounted on said supporting means, of an equalization gage secured to said cutting mechanism and connecting it to said supporting means, said gage comprising a plurality of links arranged in pairs, and pivotally connected to the opposite ends of the cutting mechanism, cross links pivotally secured to the upper ends of said links and connecting the links of each pair, and links pivotally connected to said cross links and connecting them to said supporting mechanism.

1,379,769. COW-STALL. JOHN MINOR BOTTS LEWIS, Lynchburg, Va., assignor to Cowmatic Corporation, Lynchburg, Va., a Corporation of Virginia. Filed May 20, 1920. Serial No. 382,967. 3 Claims. (Cl. 119—27.)



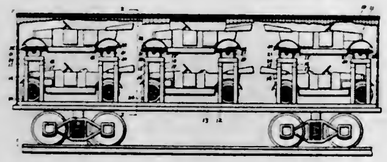
1. In cow stalls, the combination with a horizontal supporting rail and stanchions supported thereon, of an upright member connected to the supporting rail and extending downwardly, a horizontal member secured to said upright member at a point below the normal level of a cow's neck, and spaced vertical members secured to each end of said horizontal member and secured to the floor.

1,379,770. REAR-AXLE DRIVE. ALEXANDER LUCAND, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed June 25, 1919. Serial No. 306,678. 1 Claim. (Cl. 74—100.)



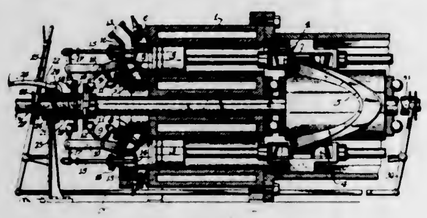
In a rear axle drive for motor vehicles, a differential gear including differential stub shafts, a housing for the gear having sleeves through which said stub shafts extend, gears journaled on the sleeves and provided with hubs in driving engagement with the shafts, a jaw clutch feathered on one of the stub shafts and engageable with the housing of the differential, a pin carried by said clutch and extending through and above the adjacent gear hub, a sleeve mounted slidably on said hub and adapted to engage the pin, and slide the clutch to lock the housing to the last named stub shaft.

1,379,771. SEAT CONSTRUCTION FOR VEHICLES. CHARLES W. MCKINLEY, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 5, 1917. Serial No. 194,902. 8 Claims. (Cl. 155—5.)



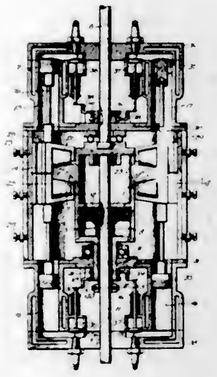
2. A seat construction for vehicles, comprising a seat support; and a seat carried thereby, with the top of said seat sloping downwardly from the center of the vehicle toward the outside.

1,379,772. CARBURETER. FRANK D. MALTBY, Battle Creek, Mich. Filed Oct. 10, 1917. Serial No. 195,714. 6 Claims. (Cl. 123—180.)



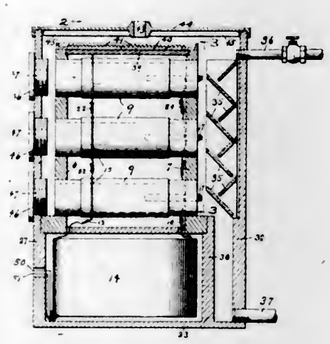
1. In a carbureter, the combination of a fuel reservoir, a nozzle, a fuel feed valve having a plurality of delivery ports of varying size, a pump cylinder having a side connection with said fuel reservoir and an end connection with said fuel valve, a plunger adapted when in its retracted position to uncover said reservoir connection, and an actuating means for said plunger whereby said plunger is gradually actuated to deliver the priming charge at an approximately uniform rate during the delivery stroke of the plunger.

1,379,773. MEANS FOR SUPPORTING AUTOMOBILES IN FREIGHT-CARS. JOHN C. MILLER, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 6, 1919. Serial No. 269,833. 5 Claims. (Cl. 105—368.)



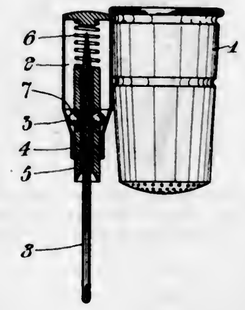
1. In a system for supporting automobiles in freight cars, a temporary knock-down frame comprising a plurality of uprights adapted to bear against and be secured to opposite sides of a freight car, each pair of oppositely arranged uprights being connected by a transverse beam which extends across the entire width of the car, and axle blocks supported by and between adjacent transverse beams.

1,379,774. REVERSING MECHANISM. PETER W. MURPHY, Chicago, Ill., assignor to Murphy Engineering Co., Detroit, Mich., a Corporation of Michigan. Filed July 8, 1918. Serial No. 243,810. 8 Claims. (Cl. 123—58.)



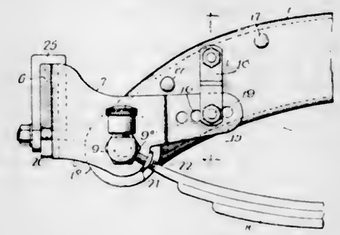
1. In an explosive engine of the type described, a main shaft, a set of cylinders arranged around the shaft, pistons for the cylinders connected to the shaft to cause interroration of the shaft and set of cylinders, a cam fixed on the shaft for operating the intake valves to the cylinders in timed relation to the piston movement, and a cam adjustable on the shaft to operate the exhaust valves to the cylinders at either side of the intake valves.

1,379,775. INTERNAL-COMBUSTION ENGINE. PETER W. MURPHY, Chicago, Ill., assignor to Murphy Engineering Company, Chicago, Ill., a Corporation of Michigan. Filed Feb. 10, 1919. Serial No. 276,194. 7 Claims. (Cl. 123—58.)



2. An internal combustion engine comprising a main shaft, cylinders and pistons disposed parallel to the shaft, a cam carried by the main shaft and rotated by the pistons, a drive shaft, and clutch mechanism carried within the main shaft cam connecting the main and drive shafts.

1,379,776. OZONIZER. MELVIN J. NAPIER, Akron, Ohio. Filed Apr. 8, 1920. Serial No. 372,338. 8 Claims. (Cl. 204—32.)



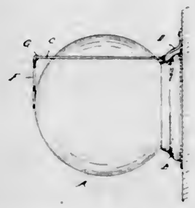
1. In an ozonizer, the combination of a pair of supports, a porcelain tube mounted therein, and a pair of tubular electrodes, one on the outside and the other on the inside of the porcelain tube, the inner electrode being cylindrical and having external projections to space it from the porcelain.

1,379,777. THIMBLE ATTACHMENT. LUDWIG OSCAR ÖIJERHOLM, Eskilstuna, Sweden. Filed Sept. 11, 1918. Serial No. 253,502. 4 Claims. (Cl. 223—51.)

1. The combination with a thimble of a pinching attachment for grasping a needle comprising a spring-actuated grasping member adapted by spring-action to bear against the needle introduced in the pinching attachment and to automatically grasp said needle.

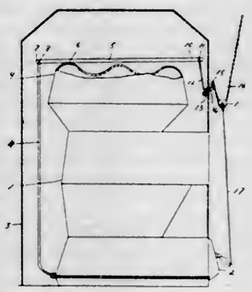
1,379,778. ATTACHING-BRACKET. WILLIAM G. PANCOAST and WILLIAM J. GROTENHUIS, Chicago, Ill., assignors to Biflex Products Company, Waukegan, Ill., a Corporation of Illinois. Filed Nov. 1, 1920. Serial No. 421,197. 7 Claims. (Cl. 293—55.)

2. An attachment bracket for bumpers comprising a plate adapted to be clamped to the side of a vehicle frame member by means of the spring pivot bolt thereof, said plate having a rearwardly extending arm and a series of longitudinally spaced holes therein and a link adapted to be connected at one end to a hole in said frame member and at its other end to one of said holes in said arm and substantially in vertical alinement with said hole in the frame member.



1,379,779. FILE. ERIC M. PRITZ, Jackson, Ohio. Filed Oct. 4, 1919. Serial No. 328,416. 3 Claims. (Cl. 29—78.)

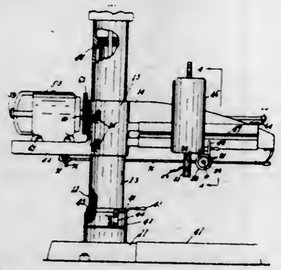
1. A file having oppositely arranged faces, each face being provided with two sets of teeth, the sets of tooth upon each face extending longitudinally thereof side by side, all of the teeth in each set extending in the same direction, the teeth in each set upon one face of the file extending in the same direction as the teeth upon the same side of the opposite face, the last named teeth upon the opposite faces being continuous about the edge of the file, the teeth in one set upon each face being inclined in the



same direction transversely of the face with the teeth in the other set upon the other face.

1,379,780. ILLUMINATED HOUSE-NUMBER. OTTO PROCHAZKA, Detroit, Mich. Filed July 3, 1919. Serial No. 308,597. 3 Claims. (Cl. 40—131.)

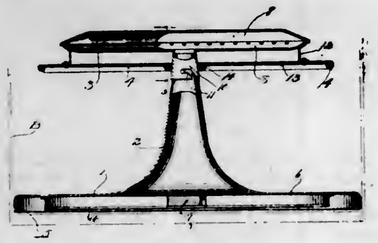
1. In a device of the character described, the combination with a porch globe, of a ring embracing the upper portion of said globe, a bendable bracket secured to said ring and attachable to the surface supporting the globe, and a series of digits depending from the ring at the front of the globe and forming a house number.



1,379,781. AUTOMATIC DAMPER-REGULATOR. WILLIAM V. ROBINSON, Owosso, Mich., assignor to Independent Stove Company, Owosso, Mich., a Corporation of Michigan. Filed Nov. 10, 1919. Serial No. 337,083. 4 Claims. (Cl. 236—104.)

1. The combination in a heater of a fire box having a vertically expansible upper chamber terminating in an annular crown, a casing inclosing the fire box in spaced relation thereto, a draft door for the heater, a fulcrum member secured to the heater base and extending upward

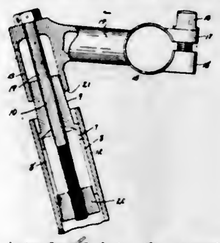
in the space between the heater and the outer casing, a lever pivotally engaging said fulcrum member and supported upon said annular crown on the side adjacent to said fulcrum, said lever having a multiplying arm extending from the point of bearing on said crown to the opposite side of the heater, and an operating connection between the free end of said lever and said draft door.



1,379,782. ELECTRIC DRIVING MEANS FOR DRILLING MACHINERY. HERMAN W. SCHATZ, Norwood, Ohio. Filed June 9, 1917. Serial No. 173,800. 5 Claims. (Cl. 77—28.)

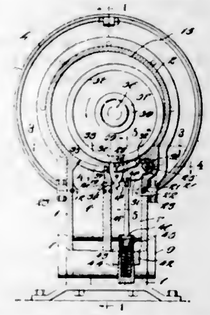
1. In a drilling machine, the combination of a column, a drill-arm adjustable up and down on said column, a tool-spindle adjustable laterally on said drill-arm, an electric motor mounted on said drill-arm having operative connection with said tool-spindle for operating the same, an electric control device on said drill-arm distanced from said tool-slide, and a manual control moving with said tool-slide for said electric control device for operating the latter.

---



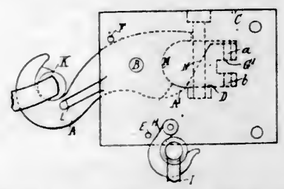
1 79,783. FOUNTAIN-WASHER FOR CLOTHES-OILERS. ALFRED H. SCHWALLER, Milwaukee, Wis. led Feb. 9, 1920. Serial No. 357,276. 1 Claim. (Cl. —30.)

A fountain attachment for clothes boilers comprising a base portion adapted to seat on the bottom of the boiler and to form therewith an inclosed space, a hollow column extending upwardly from the center of said base portion and in communication therewith, the upper surfaces of said base portion and the side of said column forming a continuously curved surface, an elongated hollow head detachably mounted on the upper end of said column and in communication therewith, the upper side of said head being in cross section substantially in the shape of an inverted V, and the lower side of said head being semi-cylindrical, the upper wall of said base portion and the lower side of the head being perforated to permit a continuous circulation of water therethrough.



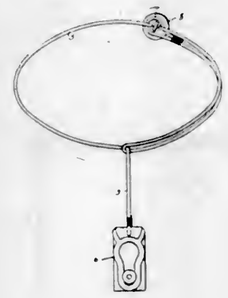
1,379,784. HANDLE-BAR-POST-REPAIR PART FOR BICYCLES. ISRAEL SCHWARTZ, Danbury, Conn. Filed Nov. 29, 1920. Serial No. 427,060. 2 Claims. (Cl. 208—115.)

1. A handle-bar post repair-part for bicycles, the said part having a tubular lower portion formed with a longitudinal slot entering its open lower end and formed at its upper end with an integral tapering tenon traversed by a concentric bolt hole, the tubular portion of the part being



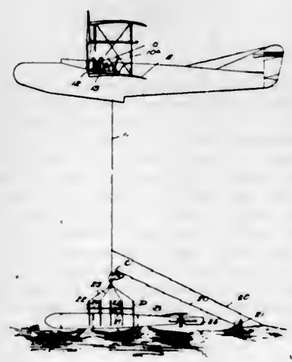
adapted to be introduced into the steering-fork tube of a bicycle and the tenon of the part being adapted in size to be crowded into the broken end of a tubular handle-bar post.

1,379,785. PUMP. JILES S. SHOCKLEY, Nashville, Tenn., assignor to The Shockley Motor Company, Nashville, Tenn., a Corporation of Delaware. Filed Sept. 16, 1918. Serial No. 254,336. 7 Claims. (Cl. 103—44.)



1. In a pump of the character set forth, the combination of a casing having a cylindrical chamber, a cylindrical piston of lesser diameter than the chamber and situated therein, means for impelling the piston about the chamber in contact with the cylindrical wall thereof, the chamber having an inlet and an outlet port, a valve element pivoted exteriorly of the chamber and having a fin projecting through the cylindrical wall of the chamber between said ports, and bearing upon the cylindrical face of the piston throughout the breadth thereof, a rod, an equalizer interposed between said rod and the valve element, and a compression spring supported within the casing and tending to force the rod in a direction to engage the fin of the valve element with the periphery of the piston.

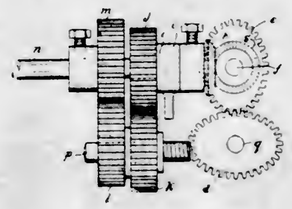
1,379,786. SLIP-HOOK. ALFRED EDWARD SMITH, London, England. Filed May 19, 1919. Serial No. 298,350. 3 Claims. (Cl. 294—82.)



1. A slip hook in combination with side plates pivotally supporting same, a curved tapering head on a turnable member having teeth formed on a segmental portion thereof, and a toothed hand-lever to engage with those on the turnable member as stated.

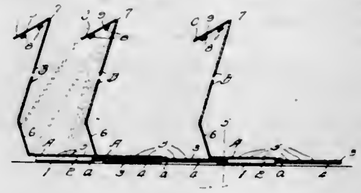
1,379,787. GARTER. WILLIAM H. SMITH, New Haven, Conn. Filed Feb. 18, 1921. Serial No. 446,007. 2 Claims. (Cl. 241—6.)

1. A garter comprising an elastic cord formed with a loop at one end and provided with a hose-supporting clasp at the opposite end, and a button mounted on the cord between its ends.



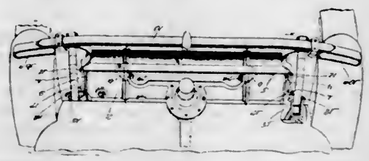
1,379,788. METHOD OF AND APPARATUS FOR DELIVERING TORPEDO ATTACKS FROM AIR CRAFT. ANDREW JACKSON STONE, Washington, D. C., assignor to the Government of the United States. Filed Dec. 27, 1918. Serial No. 268,560. 13 Claims. (Cl. 244—1.)

1. The method of attack herein described, which consists in suspending a torpedo from an aircraft, transporting the torpedo with the same in close proximity to the surface of the water, indicating to the aviator the relative position of the torpedo with respect to the surface of the water, and automatically releasing the torpedo when it has been brought to the proper launching position relative to the water.



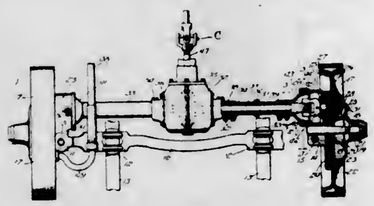
1,379,789. COMBING-MACHINE OF THE NASMITH TYPE FOR COMBING COTTON OR OTHER TEXTILE FIBERS. JOSEPH TURNER, Manchester, England. Filed Jan. 19, 1920. Serial No. 352,490. 2 Claims. (Cl. 19—6.)

1. In a combing machine of the Nasmith type, a cam shaft, a needle shaft separated from said cam shaft, a drawing head roller shaft, means for imparting rotary motion at a constant speed to said cam shaft, means between said cam and needle shafts for transmitting motion to the latter at variable speed, and means between



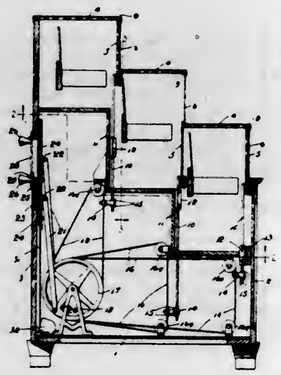
said needle shaft and drawing head roller shaft for transmitting motion to the latter at a constant speed.

1,379,790. SECTIONAL RECORD-SORTER. EDWARD P. WATERHOUSE, St. Louis, Mo. Filed Mar. 8, 1920. Serial No. 364,331. 8 Claims. (Cl. 45—4.)



8. A sectional record sorter unit comprising a plurality of substantially Z-shaped sorter units consisting of a base having side ways, an extension member integral with the rear end of the base for interlocking engagement in the ways of the base of an adjacent sorter unit, and an angular partition extending from the forward end of each sorter unit base to provide a filling space between the partitions of adjacent sorter units, the base and extension of each sorter unit acting as a floor for the papers or cards being filed to rest upon.

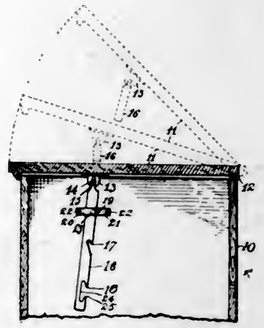
1,379,791. REAR BUMPER FOR AUTOMOBILES. FREDERIK G. WHITTINGTON, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Dec. 14, 1920. Serial No. 430,678. 2 Claims. (Cl. 293—55.)



1. A rear bumper for automobiles comprising in combination with the vehicle side springs and the rear tank, a cross-bar mounted on the tank supports terminating at vertical fore-and-aft planes between the tank ends and the side springs; a fore-and-aft bumper-supporting arm which extends in said plane and abuts on the end of the cross bar, means for securing it thereto, and a shackle device clasping the spring at a point forward of the cross-bar and having a lug on which the forward end of the arm abuts and is secured.

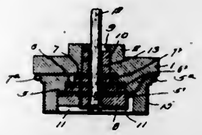
1,379,792. VEHICLE FRONT-WHEEL DRIVING MECHANISM. MARTIN P. WINTHER, Kenosha, Wis., assignor to Winther Motor Truck Company, a Corporation of Delaware. Filed Apr. 17, 1918. Serial No. 229,016. 8 Claims. (Cl. 180—43.)

1. In a motor driven vehicle, the combination of a load supporting axle, wheel supporting frames mounted at the ends of said axle and provided with integral tubular extensions, a tubular member extending between said frames, the ends thereof having pivoted connection with said extensions, and a drive shaft mounted in said tubular member and extensions and having driving connection with the vehicle wheels.



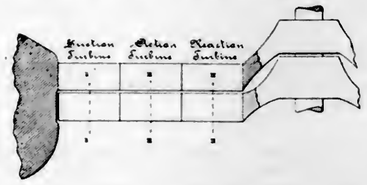
1,379,793. DISPENSING-SHOWCASE. BERT WOSINSKI, Grand Rapids, Mich., assignor to Loudon Manufacturing Company, Grand Rapids, Mich., a Corporation of Michigan. Filed Jan. 19, 1920. Serial No. 352,441. 5 Claims. (Cl. 211—26.)

1. A showcase having a series of compartments arranged in stepped relation, the front wall of each compartment being slidable downward into the case to uncover the compartment, slides mounted on the back of the case, one for each front wall, endless cables connected one to each of said front walls, wheels, one for each cable, around which said cables pass at their lower portions, and means operatively connecting the slides and said wheels whereby on movement of a slide, the associated front wall of a compartment is correspondingly moved to either open or close the compartment.



1,379,794. LID-SUPPORT. CHARLES A. AHLSTROM, Jamestown, N. Y. Filed Nov. 10, 1919. Serial No. 336,935. 6 Claims. (Cl. 217—60.)

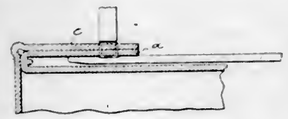
1. A lid support comprising a catch pin on the inner side of the case, a latch bar pivotally and detachably attached to the under side of the lid and riding on said catch pin, said latch bar having downwardly projecting notches therein to engage on said latch pin and support



said lid at different heights, one of said notches constituting a straight two-way catch to engage said latch pin and limit both the downward and upward movement of said lid.

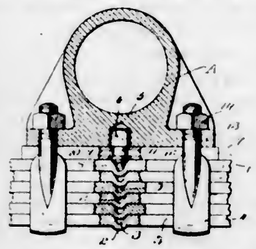
1,379,795. SWIVEL CONNECTION FOR ELECTRICAL CONDUCTORS. CHARLES O. ALLEN, Shawnee, Okla. Filed Apr. 9, 1919. Serial No. 288,754. 2 Claims. (Cl. 173—324.)

1. A swivel connection for electrical conductors comprising a body portion having a central recess and being provided with a plurality of shoulders in stepped relation bordering said recess, a contact ring carried by each shoulder, an auxiliary contact-bearing member having a plurality of shoulders, a contact carried on each shoulder of said auxiliary contact-bearing member, said auxiliary contact-bearing member being arranged to enter the recess of said body portion to bring its respective contacts into engagement with the rings of the body portion, a cap for retaining said auxiliary contact-bearing member in its operative position, the contacts of said auxiliary contact-bearing member being secured to the strands of an electrical conductor.



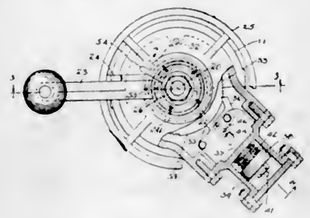
1,379,796. TURBINE. HANS BAUDISCH, Vienna, Austria, assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Feb. 17, 1917. Serial No. 149,709. 9 Claims. (Cl. 253—141.)

1. In a full admission turbine having wholly filled runner buckets, the combination with the guide blade ring or stator of a runner or rotor having buckets, a portion of each bucket being of the reaction type, another portion being of the limit type and yet another portion being of the sucking jet type, whereby in the clearance space between



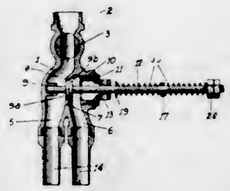
the stator and the rotor the surplus pressure over the pressure prevailing behind the runner is caused gradually to pass from a positive value to zero and thence to a negative value.

1,379,797. METHOD OF CONSTRUCTING AND SEALING SHIPPING-CASES. HERBERT R. BLISS, Monroe, Mich. Filed Jan. 26, 1920. Serial No. 354,174. 3 Claims. (Cl. 93—42.)



1. The method of constructing and sealing shipping cases of fiber or equivalent material, which comprises the constructing of the side walls and providing them with attaching flaps to parallel the side walls on the outside, the securing of a flanged cover over the end and the attaching flaps, and the passing of metal fastening members through the overlapped flanges and flaps and clenching them against a blade anvil inserted between the flaps and the side wall of the case.

1,379,798. VEHICLE-SPRING-RETAINING MEANS. EARL F. BURGESS, Racine, Wis. Filed Apr. 12, 1920. Serial No. 373,143. 3 Claims. (Cl. 267—52.)



2. An underslung spring comprising a plurality of independent plates, each having a socket and a boss, each boss being extended downwardly and disposed in the socket of the next lower plate, an additional plate parallel to said first mentioned plates and having an opening therethrough, a plug extending through said opening and having each end enlarged so as to secure the same firmly in said plate, the lower end of said plug being extended into the socket of the uppermost of said first mentioned plates and the upper end being extended to form a boss adapted to engage a recess in the under side of an axle.

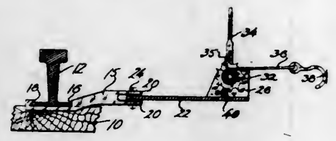
1,379,799. AUTOMATIC CUT-OFF FOR AIR JOLT-MACHINES. EDWIN S. CARMAN and EARL F. OYSTER, Cleveland, Ohio, assignors to The Cleveland Osborn Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 17, 1919. Serial No. 283,148. 15 Claims. (Cl. 121—11.)

1. The combination with pressure-fluid actuated jolt-mechanism, of a valve controlling the supply of pressure-fluid thereto, means tending to close said valve, means for manually opening said valve, and an escapement adapted to regulate the closing of said valve.

1,379,800. MILKING-MACHINE. ROMEO A. CASAROTTI, Nicasio, Calif. Filed Apr. 8, 1920. Serial No. 372,114. 5 Claims. (Cl. 31—101.)

1. A pulsator for milking machines comprising a valve body adapted to be connected to a vacuum pipe line, a passageway leading from said body in continuous communication with said pipe line, another passageway leading from said body, the body being provided with spaced and oppositely alined ports leading to the last named passageway from the vacuum pipe line and the atmosphere respectively, and a common valve adapted to alternately seat in such ports to close the same.

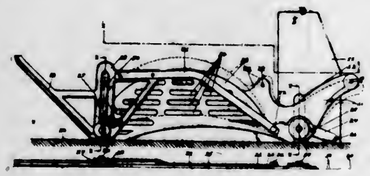
2. A pulsator for milking machines comprising a valve body adapted to be connected to a vacuum pipe line, a passageway leading from said body in continuous communication with said pipe line, another passageway leading from said body, the body being provided with spaced and oppositely alined ports leading to the last named passageway from the vacuum pipe line and the atmosphere respectively, and a common valve adapted to seat in either at a time of such ports and to be positively normally seated in the port leading from the vacuum pipe line.



3. A pulsator for milking machines comprising a valve body adapted to be connected to a vacuum pipe line, a passageway leading from said body in continuous communication with said pipe line, another passageway leading from said body, the body being provided with spaced and oppositely alined ports leading to the last named passageway from the vacuum pipe line and the atmosphere respectively, a common valve adapted to alternately seat in such ports to close the same, a spring normally holding the valve seated in one of the ports, and a common means for moving said valve from said port to close the other port and for holding the same in such last named position for a predetermined period of time against the pressure of the spring.

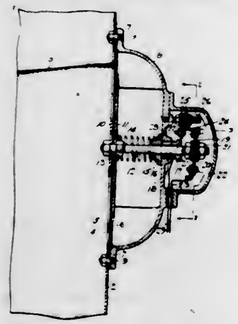
4. A pulsator for milking machines comprising a valve body adapted to be connected to a vacuum pipe line, a passageway leading from said body in continuous communication with said pipe line, another passageway leading from said body, the body being provided with spaced and oppositely alined ports leading to the last named passageway from the vacuum pipe line and the atmosphere respectively, a common valve adapted to alternately seat in such ports to close the same, a stem on the valve projecting from the body, a rod parallel to the stem, an arm on the rod connected to the stem, and means for moving said rod a distance equal to the spacing of the ports in the body.

5. A pulsator for milking machines comprising a valve body adapted to be connected to a vacuum pipe line, a passageway leading from said body in continuous communication with said pipe line, another passageway leading from said body, the body being provided with spaced and oppositely alined ports leading to the last named passageway from the vacuum pipe line and the atmosphere respectively, a common valve adapted to alternately seat in such ports to close the same, a stem on the valve projecting from the body, a rod parallel to the stem, an arm on the rod connected to the stem, a power driven shaft at



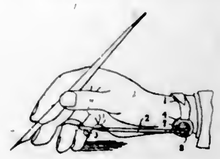
right angles to the rod, a cam on the shaft, and a lug on the rod with which the cam engages, the lug being held by the cam in such moved position for a predetermined portion of the rotation of the cam.

1,379,801. TIE-STRAIGHTENER. CHARLES L. COLE, Milford, Utah. Filed June 22, 1920. Serial No. 390,927. 5 Claims. (Cl. 254—43.)



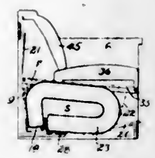
1. In a tie straightener, a solid plate having a recess in its upper face to receive the base of a rail, a reel supporting member at one end of the plate, and a reel on said member to carry a cable, said recess constituting the sole means for rtaining the plate on the rail.

1,379,802. SAW-GUARD. HAMILTON A. COOPER, Toledo, Ohio, assignor of one-half to Charles A. Briggs, Toledo, Ohio. Filed Oct. 1, 1917. Serial No. 194,179. 8 Claims. (Cl. 193—159.)



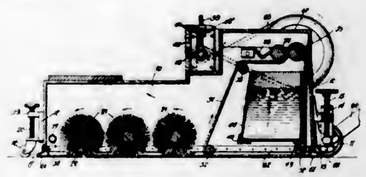
1. A device of the class described, comprising the combination of a saw table; a saw; a hood adapted to partially embrace said saw; a pair of independent guard members adjacent the forward end of said hood one on each side thereof; links connected to said guard members and pivotally connected to said hood near the rear end thereof; and means for limiting the movement of said guard members relative to said hood.

1,379,803. INDICATOR FOR STORAGE-HOPPERS OR OTHER RECEPTACLES. EDSON C. COVERT, New Kensington, Pa., assignor to Heyl & Patterson, Inc., Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Feb. 27, 1918. Serial No. 219,530. 1 Claim. (Cl. 200—52.)



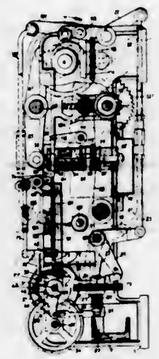
In an indicator of the character described, the combination with a hopper or other receptacle having an opening, a diaphragm covering said opening, a movable rod connected to said diaphragm, a dished member secured to said hopper at said opening, said rod passing through an opening in said dished member, a freely movable collar surrounding said rod, a spring interposed between said diaphragm and said collar, an adjusting screw surrounding said rod and passing through said dished member to engage said collar, an electrical contact carried by said rod, and a stationary electrical contact in the path of said first-named contact.

1,379,804. APPARATUS FOR INSURING THE CORRECT POSITION OF THE FINGERS AND HAND IN WRITING. ADELIN GISLAIN AUGUSTE SORNIN DE LEYSAT, Etterbeek-Brussels, and CHARLES DENIS DISCRY, Ixelles-Brussels, Belgium. Filed Nov. 29, 1920. Serial No. 427,201. 3 Claims. (Cl. 120—107.)



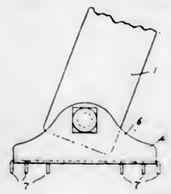
1. Apparatus for insuring the correct position of the fingers and hand in writing, comprising, a wristlet, a circular plate secured upon said wristlet, a thin steel strip having two ends, an adjustable pivotal connection between said plate and one end of said steel strip, and means for engaging and holding the third and fourth fingers of the hand in the other end of said steel strip.

1,379,805. SOFA-BED. JOSIAH A. DEWEY, San Francisco, Calif., assignor, by mesne assignments, to Murphy Door Bed Company, San Francisco, Calif., a Copartnership Firm consisting of William L. Murphy and William K. White. Filed May 5, 1917. Serial No. 166,607. 2 Claims. (Cl. 5—51.)



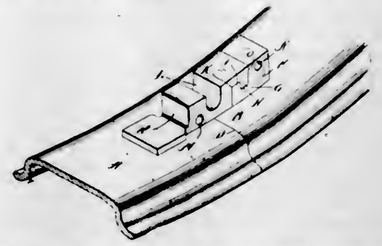
2. In a sofa bed, a housing, a middle section pivoted directly to said housing, a foot section pivotally mounted on said middle section, a head section pivoted directly to said housing, an upholstered mattress, and a wire fabric connected to said head and foot sections for supporting said mattress in horizontal position in the bed form of said sofa bed, and connected to said middle section to form a sling for supporting the folded mattress in the sofa form of said sofa bed.

1,379,808. BRUSHING AND SCRUBBING MACHINE. KAJETAN S. DUBICKI and PAUL J. MILLER, Battle Creek, Mich. Filed Nov. 28, 1917. Serial No. 204,417. 5 Claims. (Cl. 15—14.)



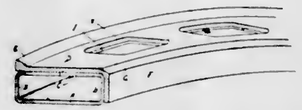
1. In a floor scrubbing machine, the combination of a casing open at its bottom, a sealing strip carried upon the lower edge of the casing for contact with the floor to seal the edge of the casing thereagainst, adjustable rollers mounted on the casing for supporting the same and maintaining the casing at the desired height to compress the sealing strip, means for delivering water into one end of the casing to wet the floor, a brush arranged in the casing adapted to work against the wet floor, and a wiper arranged within the casing for absorbing moisture on the surface of the floor subsequent to scrubbing.

1,379,807. MACHINE FOR PERFORATING JACQUARD-CARDS FOR EMBROIDERY-MACHINES. OTTO FAHRNI, Thoune, Switzerland, assignor to Leopold Wyler and Anna Helena Rieser-Beutter, Berne, Switzerland. Filed Nov. 8, 1920. Serial No. 422,655. 7 Claims. (Cl. 164—114.)



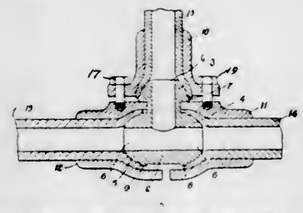
1. In a machine of the character described for perforating jacquard cards for embroidering machines, the combination with a punching device comprising a plurality of feeler members, a rotatable main determinative member arranged to control some of said feelers selectively and an auxiliary determinative member arranged to selectively control other of said feelers, of means positively connecting the said main and auxiliary determinative members together and arranged to impart the rotary movement of the former to the latter, said auxiliary determinative member being so arranged that the feelers controlled thereby are inoperative on the punching device when the main determinative member does not pass its zero position, and means for returning the said auxiliary determinative member into its zero position independently of the movement of said main determinative member, substantially as set forth.

1,379,808. SAFETY-SHOE FOR LADDERS. HERBERT W. FIES, Cleveland Heights, Ohio, assignor of one-half to Max L. Jeffrey, Cleveland, Ohio. Filed July 2, 1920. Serial No. 393,510. 1 Claim. (Cl. 228—61.)



A shoe for ladders and the like, comprising a sheet metal member of uniform thickness provided with a series of integral gripping elements formed at each of its end portions and bent downwardly therefrom, a series of gripping elements located centrally in each half of said shoe and directed similarly to said end gripping members, intermediate series of gripping elements located between said first mentioned elements and stamped downwardly from said plate in an opposite direction and upwardly extending flanges on opposite sides of said member formed from the edge portions of the metal member, said flanges being adapted to removably receive the base of the ladder therebetween.

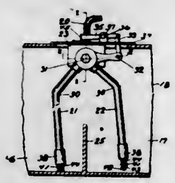
1,379,809. DEMOUNTABLE RIM AND MEANS FOR FASTENING SAME. EMORY M. FOSTER, Cleveland, Ohio, assignor to The Hydraulic Pressed Steel Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 15, 1918. Serial No. 244,952. 5 Claims. (Cl. 301—30.)



2. The combination with a fixed rim, of a transplit tire carrying rim adapted to be arranged thereon, said tire carrying rim having interlocking members connected to the ends of said rim, a bolt passing through the fixed rim, one of said members connected to the tire carrying rim having a transverse opening adapted to receive said bolt.

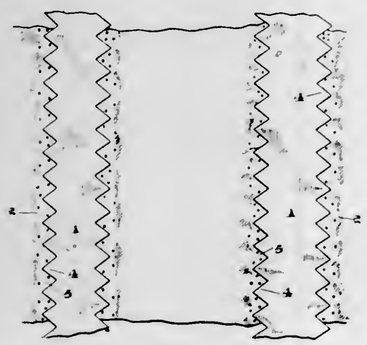
1,379,810. SHEET-METAL FELLY. HENRY J. FOSTER, Cleveland, Ohio, assignor to The Hydraulic Pressed Steel Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 13, 1918. Serial No. 234,106. 2 Claims. (Cl. 301—96.)

1. A felly comprising a bottom, side walls, and inwardly projecting top portions cut away at intervals, and a band having openings at intervals, and arranged upon and attached to said top portions, the openings in the band registering with the openings in the felly top.



1,379,811. PIPE-JOINT AND THE LIKE. THOMAS LILLIE FYFFE, Dundee, Scotland. Filed Sept. 28, 1920. Serial No. 413,297. 1 Claim. (Cl. 285—84.)

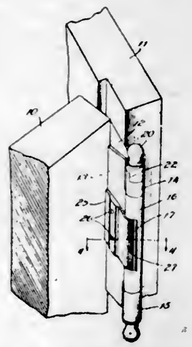
A pipe coupling device, comprising a tubular three-way member having semispherical ends, an annular band encircling each of said ends, a tubular collar for each of said ends, each of said collars having a flared end adapted to encircle one of said semispherical ends and spaced there-



from a distance sufficient to accommodate the wall of a pipe between said semispherical end and said collar, each of said collars having a cylindrical portion adapted to encircle its pipe, and means for securing said collars together.

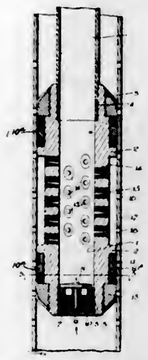
1,379,812. FUEL-RESERVE-SUPPLY SYSTEM. CHARLES F. GREEN, Defiance, and HARRY W. LINDSEY, Jr., Toledo, Ohio, assignors to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Nov. 18, 1918. Serial No. 262,994. 34 Claims. (Cl. 158—46.5.)

1. A device of the class described, comprising a tank having oppositely arranged liquid holding compartments, a pivoted recessed member having connections movable within the tank and adapted to alternately communicate with each of said compartments when in different positions of adjustment, and means for adjusting said member relatively to said tank.



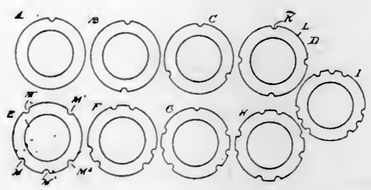
1,379,813. ROADWAY. ROBERT GREENE, London, Ontario, Canada. Filed Oct. 29, 1920. Serial No. 420,506. 4 Claims. (Cl. 238—5.)

1. In a road surface, a longitudinal strip of hard road material and an adjacent strip of relatively softer or less permanent material, the hard material having a continuous series of triangular projections formed integral therewith along its edge and forming triangular recesses into which the softer material of the adjacent strip extends.



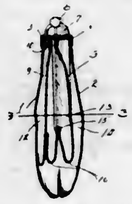
1,379,814. HINGE-BUTT. AUGUST J. GUSTAFSON, Maywood, Ill. Filed Mar. 18, 1921. Serial No. 453,306. 4 Claims. (Cl. 16—107.)

3. A butt embodying two members having alined knuckles, a freely removable pin passing through the knuckles for pivotally connecting the members, the said pin having a flattened portion, interengaging shoulders on the pin and one of the knuckles for maintaining the pin against rotation, an elastic element, and means securing the elastic element to one of the said members, said elastic element projecting between adjacent knuckles to engage and move over the surface of said pin for creating a friction to maintain the members in their relative adjusted positions and adapted to pass to the said



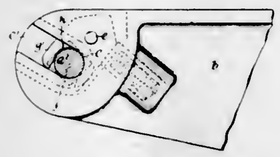
flattened portion of the pin to automatically swing one of the members about the pivot with respect to the other member.

1,379,815. OIL-WELL-SCREEN AND LINER CLEANER. JAMES ROBERT HALL, Winnfield, La. Filed July 30, 1920. Serial No. 400,101. 8 Claims. (Cl. 166—20.)



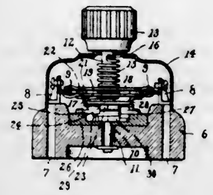
1. A device of the character specified, comprising a tubular body having a check valve at its lower end for preventing the outflow of water from the same, and having a series of radial, choked-bore nozzles in its side wall for directing the jets of water through a screen liner, said body having packing rings above and below the series of nozzles, and annular cutters detachably connected with the ends of the body for dressing the inner surface of the liner.

1,379,816. SHIM. FRED HASKEL, Detroit, Mich. Filed Dec. 24, 1917. Serial No. 208,663. 4 Claims. (Cl. 283—1.)



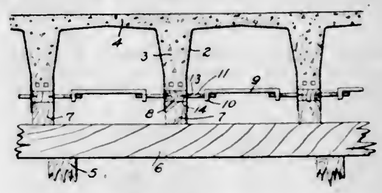
1. A set of metal shims comprising a plurality of shims of different thicknesses and identification marks formed by completely stamping out a portion of the body of the metal.

1,379,817. PURSE. HERMAN J. HEGWER, Oakland, Calif. Filed June 14, 1920. Serial No. 388,795. 5 Claims. (Cl. 150—37.)



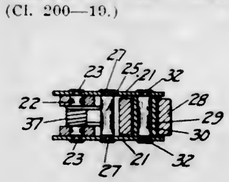
5. A purse comprising an outside container, an inner container, said containers having separate openings, bow closures for said openings whereby access may be had separately to either container, and said inner container having slots in the bottom to allow the free passage of smaller coins therefrom into said outer container while retaining the larger coins in the inner container.

1,379,818. BEARING. FLORENT HINNEKENS, Paterson, N. J. Filed Jan. 28, 1921. Serial No. 440,556. 3 Claims. (Cl. 64—10.)



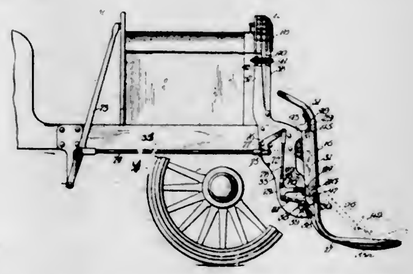
1. The combination of a bearing member having a bearing formed with an entrance thereto relatively lateral of the bearing axis, a crotched keeper movable on a pivot offset from said axis from a position where its crotch straddles said axis and opens in angular relation to the bearing entrance, thus to retain in the bearing the part to be journaled, into a position where its crotch faces toward said entrance, whereby to release said part, and spring means yieldingly resisting movement of the keeper from one of said positions to the other.

1,379,819. ELECTRIC SNAP-SWITCH. DAVID HJORTH, Bridgeport, Conn., assignor to The General Machine & Manufacturing Co., Bridgeport, Conn., a Corporation of Connecticut. Filed Feb. 24, 1919. Serial No. 278,600. 6 Claims. (Cl. 200—63.)



1. A rotary snap switch having a base, a rotary operating stem mounted therein, terminal posts, a switch bar rotatably mounted upon the stem to engage and disengage the terminals, a spring yieldably connecting the stem and switch bar, a series of spring pressed pawls carried by the base to temporarily engage and hold the switch bar against rotation, a cam secured to the stem and adapted to force the pawls outwardly to successively disengage them in a manner to allow the switch bar to throw against the next pawl in advance of the movement of said cam.

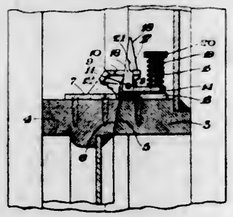
1,379,820. CONCRETE-FORM. CECIL B. HOPKINS, San Francisco, Calif. Filed Nov. 20, 1919. Serial No. 339,341. 1 Claim. (Cl. 25—131.5.)



In combination with spaced wooden abutment supports, a plurality of overlapping metallic arch forms having substantially vertical sides extending between two adjacent supports and having their sides lying against the sides of said supports, said sides being provided adjacent their ends with series of vertically spaced apertures, the apertures on one end of one form being arranged to register with the apertures on the overlapping end of the adjacent form and holding means passed through selected registering apertures and into the wooden abutment supports and bearing against the surface of the inner form, for fixing and holding the forms in position on the abutment stops.

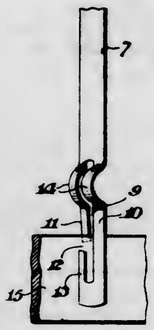
1,379,821. IGNITION-TIMER. EDWARD B. JACOBSON, Pittsfield, Mass., assignor to J and B Manufacturing Company, Pittsfield, Mass., a Corporation of Massachusetts. Filed Nov. 8, 1918. Serial No. 261,607. 3 Claims. (Cl. 200—19.)

1. In a device of the class described, a support, a contact-member mounted thereon and movable relatively thereto, and a hardened metallic bearing member rigidly mounted on said support and interposed between said support and the contact-member and adapted to maintain the axis of said contact-member in constant parallel relation to said support.



1,379,822. AUTOMOBILE-FENDER. CARL C. JENSEN and GEORGE H. IRWIN, Chicago, Ill., assignors to Standard Fender Co., Chicago, Ill., a Corporation of Delaware. Filed Apr. 6, 1918. Serial No. 227,106. 58 Claims. (Cl. 293—45.)

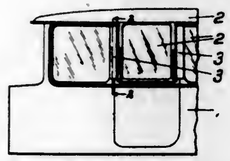
1. In a fender, the combination of a scoop section and a section arranged in juxtaposition to the scoop section, both of said sections being constructed to be raised and



lowered independently of each other, one of said sections having means for raising the same and holding it in said last named position and being arranged to be automatically lowered when the holding means is released.

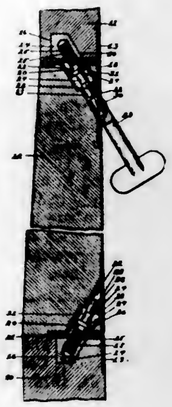
1,379,823. SASH-FASTENER. PETER H. JOHNSON and PAUL A. KOSECKI, Kenosha, Wis. Filed July 12, 1920. Serial No. 395,742. 3 Claims. (Cl. 292—128.)

1. In a sash fastener, the combination of a latch plate secured to an outer surface of one of the sashes, a bell crank lever vertically pivotally mounted on the other sash and exteriorly thereof, one arm of said lever having a locking latch engageable with said plate, and a spring acting on the other arm of said lever to hold the latch in locked position and draw the sashes together.



1,379,824. HEDDLE. JACOB KAUFMANN, Philadelphia, Pa., assignor to Steel Heddle Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 18, 1921. Serial No. 453,519. 6 Claims. (Cl. 139—14.)

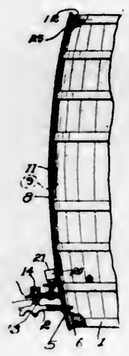
1. A heddle made from a thin, flat strip of metal having mortises near the ends thereof for mounting the same on the heddle supporting bars, said mortises being formed by slotting the strip from which the heddle is formed, leaving strips on each side of each mortise, and one of the strips of each mortise being transversely slitted to permit the heddle being mounted on the supporting bars without removing said bars from the frame.



1,379,825. CONVERTIBLE VEHICLE-BODY. THOMAS J. KEHOE, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 12, 1917. Serial No. 148,127. 6 Claims. (Cl. 296—45.)

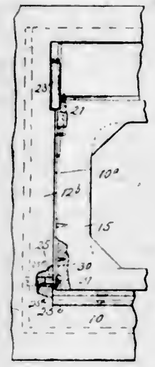
1. In a motor vehicle, the combination of a body, a permanent top, a removable pillar and means for detachably connecting said pillar at top and bottom to said top and said body respectively comprising a slotted plate secured to said body, a plate secured to the lower end of said pillar and provided with a tongue extending at a slight angle to the plane of said plate, and an offset portion connecting said tongue with said plate, said tongue being adapted to enter said slot and engage the inner face of said slotted plate, a bracket secured to said top and provided with a slot, a plate secured to the upper

end of said pillar, a clamping bolt loosely mounted in the upper end of said plate, a pin extending transversely from the inner end of said bolt and adapted to pass through said slot and a nut threaded on the outer end of said bolt and adapted to draw said pillar to position and to hold it there under tension.



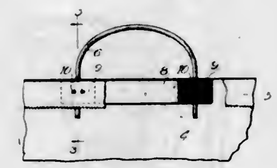
1,379,826. SECURING DEVICE FOR REMOVABLE PILLARS. THOMAS J. KEHOE, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Aug. 8, 1917. Serial No. 185,119. 7 Claims. (Cl. 296—45.)

1. In a vehicle body provided with a body portion and a top portion, the combination therewith of a demountable pillar, and means for detachably securing one end of said pillar to one of said portions, comprising a plate carried by said portion and provided with a threaded socket, an angle plate carried by said pillar and provided with an opening through one leg thereof, and a bolt rotatably and slidably mounted in said opening and in an inclined passage in said pillar and provided with a threaded end adapted to be screwed into said socket and a collar adapted to limit the movement of said bolt in one direction by engagement with said leg, an opening being provided in the other leg of said angle plate through which to insert a tool to rotate said bolt.



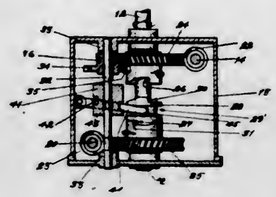
1,379,827. BARREL-SEAL. HENRY W. KOCH, San Francisco, Calif. Filed Mar. 31, 1920. Serial No. 370,084. 4 Claims. (Cl. 70—125.)

1. A lock for barrel faucets comprising a pair of metal straps, each having a hook to pass over the ends of the barrel staves, an extension on one of said straps to embrace the faucet valve stem, an extension on the other



strap to prevent the valve stem from being rotated, and means to lock the two straps.

1,379,828. DROPHEAD-SEWING-MACHINE CABINET. THEODOR KUNDTZ, Lakewood, Ohio, assignor to The Theodor Kundtz Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 19, 1918. Serial No. 258,863. 1 Claim. (Cl. 45—27.)

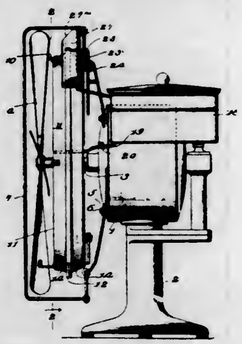


In a drop head sewing machine cabinet, the combination of a table top having a hole through it, a frame secured upon said table around said hole with one side member of the frame overhanging the edge of said hole, a head platform having a flap hinged to its rear edge which flap carries a laterally projecting flange for engagement with the overhanging part of said frame,—said platform and flap being of such size and shape that when alined they substantially fit the hole in said frame, metal straps secured to the side edges of said head platform near the front edge thereof,—each of which straps has a hole, and two alined pintle pins connected with the side members of the frame and projecting inward therefrom into the holes in said straps, one of said pintle pins having an externally screw-threaded outer end and a cylindrical inner end of smaller diameter which projects inward from said frame member, the associated side member of the frame having a hole extending entirely through it and the screw threaded part of the pintle pin having a screw threaded engagement therein when the small diametered cylindrical part thereof projects, as stated, inward from said frame member.

1,379,829. SHOPPING-BAG. WALTER F. LAWRENCE, Middletown, Ohio, assignor to Raymond Bag Company, Middletown, Ohio, a Corporation of Ohio. Filed July 1, 1920. Serial No. 393,383. 3 Claims. (Cl. 229—54.)

2. In combination with a paper bag folded at its upper end to provide an inturned flap, a cardboard strip lying under said flap, said cardboard strip provided at each end thereof with a section of woven fibrous material lying on that side of the cardboard strip next adjacent said flap, a flexible handle having portions lying outside of and against the bag, and staples embracing said portions of the handle and passing through the paper of the bag and through said cardboard strip and the woven fibrous material aforesaid.

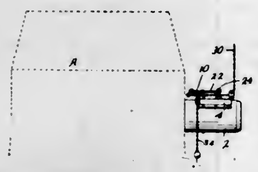
1,379,830. OPERATING MEANS FOR WASHING APPARATUS. ERNEST E. LICKISS, Oakland, Calif., assignor of one-third to Robert King and one-third to John B. Spangler, Oakland, Calif. Original application filed Jan. 5, 1920, Serial No. 349,489. Divided and this application filed Sept. 7, 1920. Serial No. 408,530. 5 Claims. (Cl. 74—50.)



1. A driving device for washing apparatus including, a shaft, a pair of gears loosely mounted on said shaft in spaced relation, means for rotating said gears in opposite directions, means associated with said shaft between said gears to alternately clutch said gears in engagement with said shaft to cause said shaft to be rotated alternately in opposite directions, a cam associated with said clutch, means for operating the same, a star wheel associated with said cam, and a pin associated with one of said gears for operating said star wheel to cause a rotation of said cam to operate said clutch.

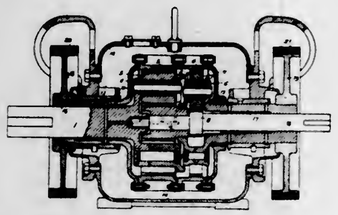
3. A driving device for washing apparatus including a driven shaft, a pair of worm wheels loosely mounted thereon, a pair of driving worms, one for each worm wheel, said worms being in mesh with opposite sides of said worm wheels, means for driving the worms continuously in one direction, a clutch splined to the driven shaft between the worm wheels for engaging the same one at a time, and means for automatically moving the clutch into alternate engagement with the respective worm wheels.

1,379,831. FLUID-CONDITIONING APPARATUS. WILLIAM A. LINDAUER, El Paso, Tex. Filed June 28, 1918. Serial No. 242,358. 3 Claims. (Cl. 261—90.)



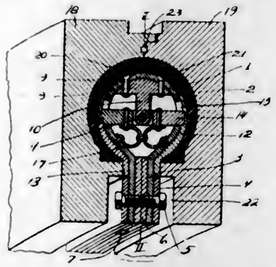
2. A fan and means for rotating the same, a perforated annulus mounted to rotate and in position to be impinged

by the air current of the fan, means for discharging a liquid on the interior of said annulus, a second perforated



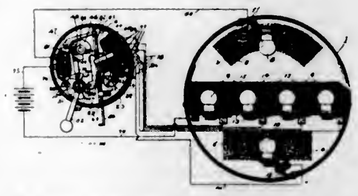
annulus exterior of the first and rotatively mounted and provided with means controlling the discharge through the perforations.

1,379,832. DAMPER-REGULATOR. LINN W. MILLIS, Kansas City, Mo. Filed Mar. 10, 1921. Serial No. 451,262. 5 Claims. (Cl. 126—286.)



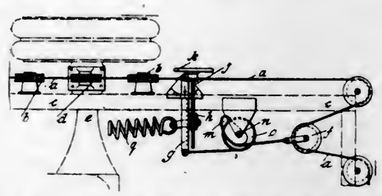
1. In a device of the character described, a draft-pipe having an opening for the admission of cold air, a smoke damper operably mounted in said draft-pipe, a check-valve to control the admission of cold air to the draft-pipe through the opening, and a connection between the smoke damper and said check valve having lost motion, whereby the former may be closed, or practically closed, before the latter is opened.

1,379,833. DRIVING AND CONTROL MECHANISM, PARTICULARLY FOR PLANING-MACHINES. FREDERICK NEWTON, Derby, England. Filed Nov. 16, 1920. Serial No. 424,543. 3 Claims. (Cl. 74—34.)



1. A reversing reduction gearing consisting of two epicyclic gears each comprising a sun pinion, a set of planet pinions, and an internally toothed ring, said internally toothed rings being mechanically united, means connecting the planet pinion carrier of one gear with the sun wheel of the other, and means for braking the internally toothed rings or said connected planet pinion carrier and sun wheel.

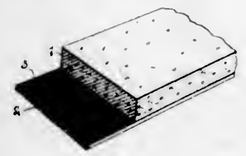
1,379,834. PNEUMATIC-TIRE CORE. FREDERICK PAULSEN, Kansas City, Mo. Filed Nov. 15, 1920. Serial No. 424,105. 14 Claims. (Cl. 18—45.)



1. A circular tire core comprising a body of rounded form in cross section and segmental plates of tapering form, fitting against the outer surface of said body and slidable radially thereof.

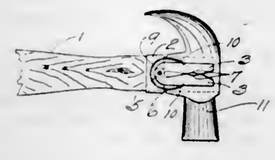
1,379,835. DIRECTION-SIGNAL FOR MOTOR-VEHICLES. JOHN PFEIFER, Springfield, Ohio, assignor of one-third to Charles L. Friermood, Springfield, Ohio. Filed Aug. 9, 1918. Serial No. 249,165. 19 Claims. (Cl. 177—327.)

4. In a device of the character described, a plurality of lights, electric circuits for the same, a power operated switch mechanism for making and breaking said circuits, and a hand operated device for controlling said switch mechanism, the construction and arrangement of said mechanism being such that when said hand operated device is thrown in one direction the switch mechanism will control the circuits to illuminate the lights successively in one direction and then simultaneously extinguish said lights and when said hand operated device is thrown in the opposite direction said switch mechanism will control said circuits to illuminate said lights successively in the opposite direction and then simultaneously extinguish the same, and means incorporated in said switch mechanism whereby when the same has been restored to neutral position the circuits will be broken.



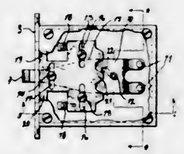
1,379,836. MEANS OF SUSPENSION OF VEHICLES. GEORGE JOHN RACKHAM, Putney, London, England. Filed July 27, 1920. Serial No. 399,368. 3 Claims. (Cl. 280—124.)

1. A vehicle combined with pulleys on the axles, pulleys on the frame of the vehicle, a suspension rope passing over



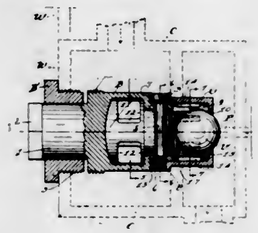
the pulleys on the axles and under the pulleys on the frame, a spring attached to the frame, a cam pivoted to the frame, and connections between the suspension rope and the cam and between the spring and the cam.

1,379,837. CELLULOID-COATED CEMENT BODY. FREDERICK C. RUPPEL, Grand Rapids, Mich., assignor to Hayes-Ruppel Manufacturing Company, Grand Rapids, Mich., a Corporation of Michigan. Filed Oct. 18, 1920. Serial No. 417,821. 3 Claims. (Cl. 72—26.)



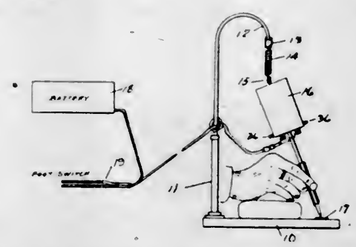
1. A composite body consisting of a sheet of celluloid, a layer of fibrous fabric attached to the celluloid, and a layer of concrete attached to the fibrous fabric.

1,379,838. NAIL-HOLDER FOR HAMMERS. ARVID SALOMAA, Duluth, Minn. Filed July 26, 1920. Serial No. 399,148. 1 Claim. (Cl. 145—30.)



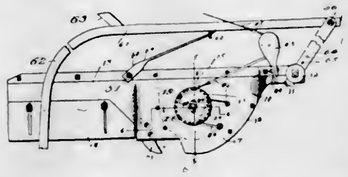
A nail holding attachment for hammers, comprising two jaws pivotally connected at their inner ends and having complementary nail engaging notches in their outer ends; a U-shaped spring mounted over said jaws and adapted to hold them closed; laterally extended grips adapted to releasably engage the hammer handle.

1,379,839. DOOR-LOCK. ALOJZY SKÓRA, Passaic, N. J. Filed Oct. 2, 1920. Serial No. 414,312. 2 Claims. (Cl. 70—31.)



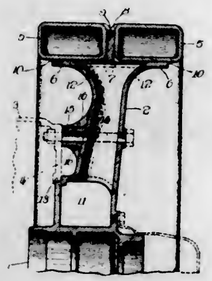
1. A device of the class described comprising a casing adapted to be secured to a door, a member adapted to be secured to a wall adjacent said door, shackles projecting from said member, a bolt movable parallel to the walls of said frame, recesses in said casing, said shackles being adapted to enter said recesses, tongues on said bolt adapted to engage said shackles within said casing, an additional recess in said casing, a recess in said member, a resilient member secured within said casing and having a head on the end thereof protruding through said additional recess and adapted to engage said recess in said first-named member.

1,379,840. VALVE FOR STEAM AND WATER SYSTEMS. OLIVER W. SMITH, Los Angeles, Calif. Filed June 1, 1920. Serial No. 386,383. 5 Claims. (Cl. 251—121.)



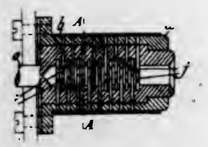
1. A valve having a body provided with a chamber and a plurality of peripheral apertures for receiving a fluid, a valve portion detachably held thereon at one end and having a chamber communicating with that in said body, and a valve in said valve portion for regulating the discharge of said fluid.

1,379,841. PORTABLE ELECTRIC ENGRAVING INSTRUMENT. WALTER E. STENNING, Providence, R. I. Filed July 31, 1919. Serial No. 314,505. 1 Claim. (Cl. 78—13.1.)



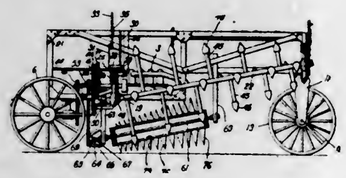
In a portable electric engraving apparatus the combination of a base, a supporting standard on said base, a marking instrument comprising a casing and a reciprocatory pencil therein, said casing being yieldably supported from said standard, an electric magnet carried at one end thereof for imparting reciprocatory movement to said pencil, an electric circuit, and a switch interposed in said circuit for controlling the flow of current to said magnet.

1,379,842. COMBINED PLANTER AND FENDER FOR CULTIVATORS. RICHARD F. STIEPER, West Side, Iowa. Filed Mar. 3, 1919. Serial No. 280,407. 9 Claims. (Cl. 221—137.)



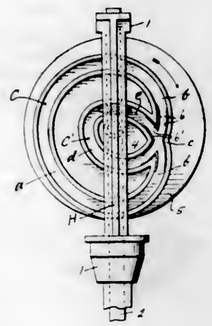
1. In a seed dispensing mechanism, the combination with a hopper made up of side plates and a U-shaped wall between them, said wall having a seed outlet in its bottom; of a disk pivotally mounted within said hopper and having cells opening axially and radially, a block fixed in the hopper alongside the outlet and closing the lateral opening of a cell when the same stands opposite to the block with its radial opening registering with said outlet, and means for moving the disk as described.

1,379,843. HOLLOW-ROLLED-RIM WHEEL. WILLIAM ERASTUS WILLIAMS, Chicago, Ill. Filed Dec. 8, 1919. Serial No. 343,352. 7 Claims. (Cl. 301—65.)



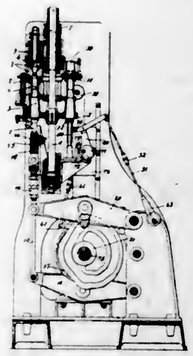
1. In a metal wheel, the combination with a spider, of two tubular, rigidly connected rim rings of circumferentially continuous metal, rectangular in cross section, lying side by side, encircling the spokes, and rigidly connected thereto.

1,379,844. LOCK. ANTOINE ANDREANI, Geneva, Switzerland. Filed June 28, 1920. Serial No. 392,272. 1 Claim. (Cl. 70—46.)



In a lock the combination of a shell, a barrel rotatable in said shell and having a key-way, two parallel rows of sliders mounted in said barrel at opposite sides of said key-way, said sliders having oppositely directed hooked members extending into said key-way, springs thrusting said sliders in opposite directions into engagement with said shell, and a push-key having two parallel side plates adapted to engage said hooked members, and an undulating web between said side-plates adapted to push said members in opposite directions and retract the sliders from engagement with the shell.

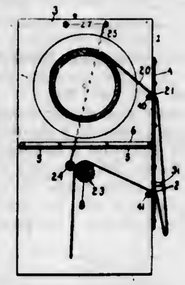
1,379,845. EXCAVATING AND GRADING MACHINE. ERVIN R. BARNES, Spokane, Wash. Filed Oct. 9, 1918. Serial No. 257,468. 5 Claims. (Cl. 37—11.)



1. In an excavating and grading machine, the combination, of a supporting structure, an excavating structure supported at one side of said supporting structure and including an axle, a plurality of arms radiating from said axle, and pick heads mounted upon the outer ends of said arms.

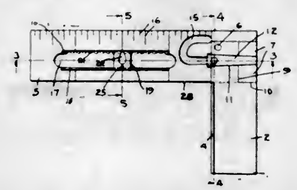
1,379,846. POWER-TRANSMITTING MEANS. MADISON H. BENSON, Austin, Tex. Filed Aug. 23, 1920. Serial No. 405,480. 2 Claims. (Cl. 74—1.)

2. A device of the character described comprising a member supported for reciprocatory movement, a rotary member, said rotary member being provided with a main cam track, a supplementary cam track arranged within the field defined by the main cam track, said tracks being in communication one with the other, a part carried by the reciprocating member and traveling within the cam tracks, and a guide shoe carried by the reciprocating member and traveling in the cam tracks, the side walls of the cam tracks at their junction being provided with inwardly disposed ribs, the guide shoe traveling between said ribs.



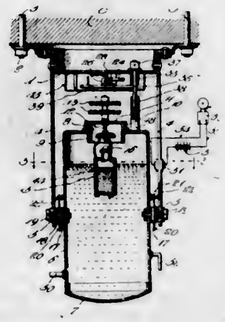
1,379,847. MACHINE FOR MANUFACTURING SUGAR LOAVES MOLDED BY COMPRESSION. ANDRÉ BOIVIN, Paris, France. Filed Nov. 17, 1919. Serial No 338,754. 4 Claims. (Cl. 25—68.)

1. In a machine for manufacturing by compression sugar loaves or compressing any other material capable of being molded, the combination of a mold of cylindrical truncated cone shape, at least one hollow cylindrical truncated cone shaped compressing piston adapted to slide in the interior of the said mold and two solid compressing pistons adapted to slide respectively in this piston and in the mold.



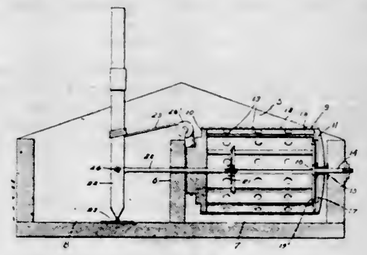
1,379,848. TOWEL-HOLDER. JOSEPH N. BORROUGHS, Oakland, Calif. Filed July 9, 1918. Serial No. 244,114. 7 Claims. (Cl. 45—32.)

1. A towel rack including a frame, a reel journaled in said frame, take-up means for the used part of the towel, and gearing between said reel and take-up means whereby said take-up means is operated faster than said reel is



unwound, said take-up means being constructed and arranged to permit the towel to slip therein.

1,379,849. TRY-SQUARE. JESSE THOMAS CAMPBELL, Elbridge, Tenn. Filed May 4, 1920. Serial No. 378,918. 1 Claim. (Cl. 33—116.)



A device of the class described comprising a blade; a handle pivoted to the blade; a latch slidable in the handle; and a keeper on the blade wherewith the latch engages to hold the handle at an angle to the blade, the latch having a projection, the blade having a cam slot wherein the projection is received, the projection coöperating with the cam slot to move the latch transversely of the blade when the handle is folded with respect to the blade.

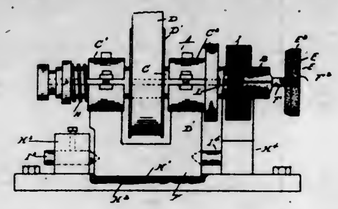
1,379,850. FIRE-EXTINGUISHER. PHILIP J. CANOVA, Jr., and CHARLES E. EGAN, Charleston, W. Va. Filed Dec. 17, 1919. Serial No. 345,465. 8 Claims. (Cl. 169—27.)

3. A device of the class described comprising a base having means for attachment to a support, an arm depending from said base, a tank pivoted to said arm and being urged to inverted position, said tank containing fire extinguishing means inert when in upright position and active when in inverted position, a thermostatically controlled latch mechanism mounted upon said base and including a turnably mounted shaft provided with a flattened portion, and a socket carried by said tank and receiving the flattened portion of said shaft therein, one wall of said socket being provided with a cutaway portion to permit the flattened portion of said shaft to become laterally disengaged therefrom when said shaft is actuated by said mechanism to dispose its flat portion in alinement with said cutaway portion of said socket.

1,379,851. WASHING-MACHINE. HOUSTON M. CARROLL, Sr., San Antonio, Tex. Filed Jan. 26, 1921. Serial No. 440,079. 3 Claims. (Cl. 68—18.)

1. In a washing machine, a body portion, a partitioning member within the body portion dividing the same into a tank and a lever housing, a rotatable drum supported within the tank, said drum having a plurality of openings formed in the wall thereof, a lever pivotally supported within the lever housing, a plunger operating in the drum and having connection with the lever, means having connection with the lever and operating over the drum for rotating the drum, and said plunger having openings formed therein.

1,379,852. TUBE-CLEANER. CHARLES EDWARD CHESTNUT and WILLIAM ALBERT HENDERSON, Calgary, Alberta, Canada. Filed Sept. 27, 1920. Serial No. 413,224. 1 Claim. (Cl. 83—64.)



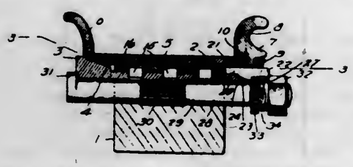
A tube cleaner, consisting of a pair of spring members with cutter portions at their outer ends, said cutter portions having overlapping parts forming substantially sections of a worm; additional spring members bearing against said cutter portions at the outer edges thereof, and a handle or holder to which the inner ends of all the spring members are secured, said additional spring members having scraper edges.

1,379,853. METHOD OF FORMING CUTTING-TOOLS. STUART A. COGSDILL, Detroit, Mich. Filed Feb. 20, 1919. Serial No. 278,271. 4 Claims. (Cl. 51—278.)

1. A process of forming combined drills and counter sinks having adjacent cylindrical and beveled portions,

consisting in rotating such a tool, grinding the cylindrical and beveled surfaces of the tool simultaneously, and effecting a radial relief of both of said surfaces while being ground.

1,379,854. LIQUID-TIGHT JOINT FOR PREVENTING LEAKAGE BETWEEN THE TERMINAL RODS AND COVERS OF ELECTRIC ACCUMULATORS. ALFRED DININ, Nanterre, France. Filed Sept. 4, 1918. Serial No. 252,669. 1 Claim. (Cl. 204—29.)



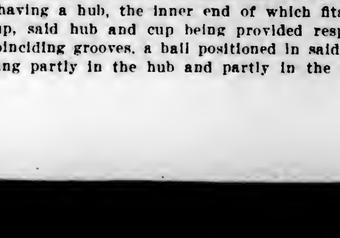
A liquid tight joint for preventing leakage between the terminal rods and covers of electric accumulators consisting of a celluloid sleeve having an internal diameter which is less than the diameter of the terminal rod and is adapted to be expanded by heat and to be passed over the terminal rod in a heated condition so that in cooling it shall shrink tightly on the rod, and a celluloid collar adhesively attached to the said sleeve and to the cover to complete the closure of the joint.

1,379,855. CREAM DEPILATORY. JOSEPH DONNER, Chicago, Ill. Continuation of application Serial No. 378,644, filed May 3, 1920. This application filed Mar. 3, 1921. Serial No. 449,530. 17 Claims. (Cl. 167—9.)

5. A composition of matter for the purpose specified, comprising a depilating agent carried in a base of colloids, in a mixture of creamy consistency.

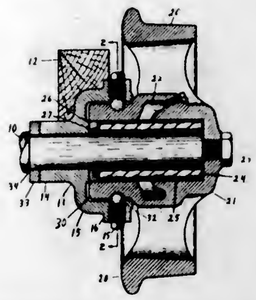
11. A depilatory comprising an alkaline sulfid solution, and a substance capable of forming a gel therewith.

1,379,856. WHEEL-RIM-FASTENING DEVICE. FRED F. ENTER, Cuyahoga Falls, Ohio, assignor of one-half to William Martin, Cleveland, Ohio. Filed May 3, 1920. Serial No. 378,524. 2 Claims. (Cl. 301—17.)



1. In a wheel rim fastening device, the combination with a wheel felly, a felly band mounted thereon, a rim in surrounding relation to the felly band, the inner side of the felly band having a beveled abutment flange, the adjacent faces of the felly band and the rim having spaced wedge plates, a wedge engaging between said wedge plates for forcing the rim toward the beveled flange thereby securing the rim in position, means for adjusting and holding the wedge in place, and means for causing an outward radial action of one end of the wedge to prevent lateral movement of the rim toward the outer side of the wheel.

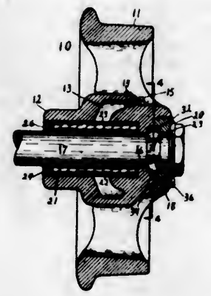
1,379,857. PROCESS FOR TREATING WICKS. JOHN FEENEY, Lodi, N. J. Filed Dec. 18, 1920. Serial No. 431,799. 1 Claim. (Cl. 67—69.)



The herein described method of treating lamp wicks which consists of first preparing a solution of lime water to a strength of one degree on a hydrometric scale, then immersing the wicks in the solution, then boiling the wicks and solution for three hours or until the solution has reached the strength of one and one-half degrees on the hydrometric scale, and finally drying the wicks.

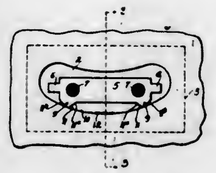
1,379,858. TUBE-BENDING APPARATUS. JOHN F. GAIL, Kenosha, Wis., assignor to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed Dec. 13, 1916, Serial No. 136,599. Renewed Nov. 20, 1920. Serial No. 425,561. 10 Claims. (Cl. 153—46.)

1. In tube-bending apparatus, the combination of a stationary former, a swiping block fitting the former and having a face fitting one side of the unbent tube, means for holding one end of the tube relative to the former, an outer support engageable with the other side of said tube, means operable by power for engaging the support with the tube, and means for moving said support and said swiping block to bend the tube around the former.



1,379,859. WHEEL CONSTRUCTION. AIME GENTON, Louisville, Ky., assignor of one-third to Robert L. Schmitt, Louisville, Ky. Filed Sept. 29, 1919. Serial No. 327,139. 1 Claim. (Cl. 301—111.)

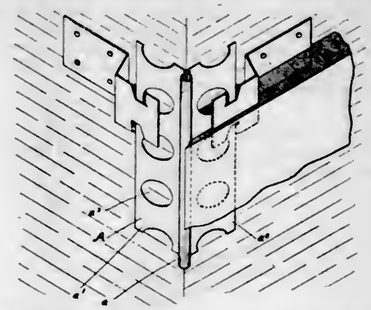
The combination with a frame, of a bearing secured thereto comprising a sleeve having a cylindrical bore and a cup shaped extension thereon, an axle fitting in the sleeve and projecting beyond the same and having an abutting shoulder adjacent the inner end of the sleeve, a wheel having a hub, the inner end of which fits within said cup, said hub and cup being provided respectively with coinciding grooves, a ball positioned in said grooves and lying partly in the hub and partly in the cup and



retaining the wheel against withdrawal, said hub being closed at its outer end, a roller bearing held within the hub and surrounding said axle, and a closure for the inner end of the hub to retain the bearing in place, said closure bearing against said sleeve whereby to hold the closure against accidental displacement.

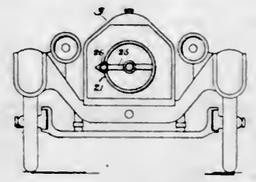
1,379,860. LOOSE WHEEL-MOUNT. AIME GENTON, Louisville, Ky., assignor of one-third to Robert L. Schmitt, Louisville, Ky. Filed Sept. 29, 1919. Serial No. 327,140. 1 Claim. (Cl. 301—111.)

In a loose wheel mount, an axle having a circumferential groove a spaced distance from an end thereof, a wheel having a hub, said hub having a central bore adapted to receive said axle, the hub being counterbored forming a shoulder, a cap adapted to fit in said counterbore and seat on said shoulder, said cap having a bore to receive the end of the axle, the abutting edges of the cap and the shoulder respectively being provided with grooves which register with the groove in the axle and form a raceway, and a ball positioned in said raceway, said counterbore being of sufficient diameter to permit insertion of said ball laterally.



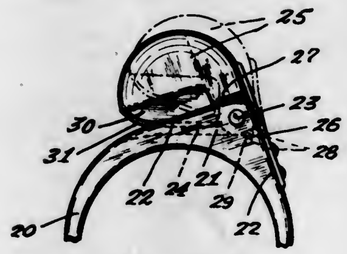
1,379,861. ADVERTISING DEVICE. PAUL E. GOLDMANN, Pittsburgh, Pa. Filed May 28, 1920. Serial No. 385,038. 5 Claims. (Cl. 40—138.)

1. In a device of the character described, a flexible member capable of being bent into rounded form for reception by a concaved rack, a movable member, and means actuated by movement of said flexible member for shifting the movable member, said means and the movable member being positioned within the flexible member.



1,379,862. METAL BEAD FOR PLASTICS. WILLIAM M. GOLDSMITH, Cincinnati, Ohio. Filed Mar. 6, 1919. Serial No. 281,058. 3 Claims. (Cl. 72—121.)

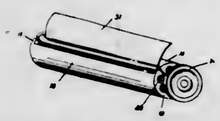
1. As a new article of manufacture a spacer clip for beads comprising parallel plates and a spacer member connecting the plates and holding them in different planes,



one of said plates having lugs projecting therefrom and adapted to engage a bead.

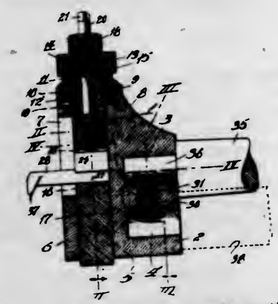
1,379,863. DIRECTION-INDICATOR FOR MOTOR-CARS. HARRY H. GRAY, Kansas City, Mo. Filed Nov. 18, 1916, Serial No. 132,212. Renewed Apr. 7, 1921. Serial No. 459,337. 2 Claims. (Cl. 116—47.)

1. In a direction indicator for motor cars, a circular holder having a cross-bar, a circular guide frame concentrically within the holder and also provided with a cross-bar, a shaft journaled in the said cross-bars, a finger on said shaft, yielding means to prevent accidental movement of the finger by engagement with the circular guide, a lamp secured to said shaft, a lamp carried by the finger for movement thereby in a circular direction, and means for imparting rotation to said shaft; said lamps being of contrasting colors.



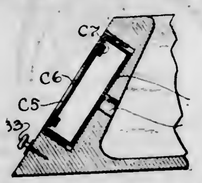
1,379,864. TWINE-CUTTER. ALTON N. GREGORY, Seattle, Wash. Filed Aug. 26, 1920. Serial No. 406,193. 1 Claim. (Cl. 30—14.)

A twine cutter comprising a ring; an integral triangular peripheral extension formed on said ring, said peripheral extension having a longitudinal groove formed therein; a knife holder; a lug on said holder adapted to pivotally connect said holder to said peripheral extension; shoulders on said lug adapted to contact with said exten-



sion to limit the swinging movement of said holder in a downward direction; a stop on said lug adapted to contact with the bottom of said longitudinal groove to limit the swinging movement of said holder in an upward direction; a knife medially disposed in said holder having its cutting edge normally disposed in said longitudinal groove; and resilient means adapted to retain said knife holder in a normally retracted position.

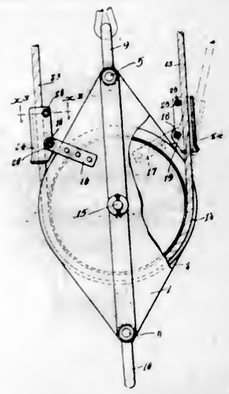
1,379,865. CIGARETTE-ROLLING DEVICE. ALBERT C. H. HOLDBROOK, Providence, R. I. Filed May 5, 1920. Serial No. 379,167. 3 Claims. (Cl. 131—5.)



2. A cigarette-rolling device comprising a divided frame having its halves hinged together, a plurality of elongated rolls arranged in a circle having their peripheries in close proximity to each other and having bearings in said frame halves, a gear on each roll, a main central hand-operated gear for engaging the gears on all of said rolls to rotate them in unison, said frame halves being adapted to be swung apart to receive the tobacco between the sets of rolls and then close, and means for locking the frame-halves in closed position.

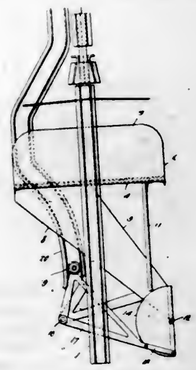
1,379,866. ADJUSTABLE OFFSET TOOL-HOLDER. CECIL L. HOLLINGSWORTH, St. Louis, Mo. Filed Apr. 5 1919. Serial No. 287,825. 4 Claims. (Cl. 82—37.)

1. A tool holder comprising a body portion, a tool adjustably carried by said body portion, means provided on said body portion whereby a revoluble element can be secured to said body portion, and other means whereby said body portion can be secured to a stationarily held element and clamping means carried by said body portion coöperable with either one of said elements.



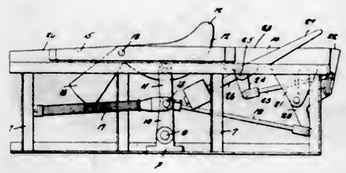
1,379,867. DISPLAY-CABINET. BURTON L. JOHNSON, Knoxville, Tenn. Filed Mar. 11, 1919. Serial No. 281,973. 4 Claims. (Cl. 211—9.)

1. In a structure of the nature described, a drawer having a front wall, a container fitted for frictional engagement in the front face of said front wall and the container having a window in its front wall.



2. In a structure of the nature described, a drawer having a fixed front wall in the outer face of which is a chamber, a container fitted into said chamber and comprising a body and a lid one of which has a window.

1,379,868. CABLE-GUARD FOR TACKLE-BLOCKS. JACK M. KELSEY, Brea, Calif. Filed May 24, 1920. Serial No. 383,703. 10 Claims. (Cl. 254—197.)

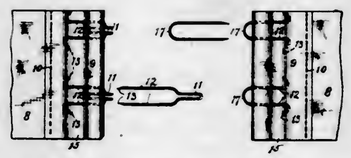


1. A cable guard combining a tackle-block having a frame and a cable sheave, a pivot rod carried by the frame and extended across the face of the sheave, a cable shoe loosely pivoted on said rod and adapted to embrace the sides and the outer surface of a cable rove around the sheave, and means carried by the shoe adapted to engage the inner surface of the cable to maintain the shoe in position.

1,379,869. MINE-SKIP. DANIEL F. LEPLEY, Connellsville, Pa. Filed July 12, 1920. Serial No. 395,589. 5 Claims. (Cl. 214—95.)

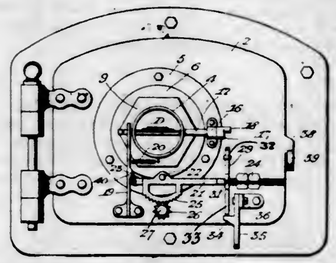
1. A device of the class described including a platform having a hinged floor section, a load holding skip portion below the platform, said floor section constituting a cover for the inlet end of the skip portion, and a combined closure and delivering chute at the discharge end of said skip portion.

1,379,870. GRAVITY-CAR CONTROL FOR MINE-HOISTS. DANIEL F. LEPLEY, Connellsville, Pa. Filed Jan. 22, 1921. Serial No. 439,204. 5 Claims. (Cl. 104—252.)



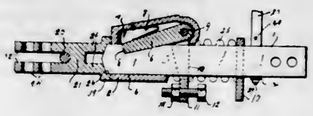
1. The combination with separate oppositely movable hoist cages, of a caging section adjacent the path of each cage and including a track having one end portion level and the remaining portion which is nearest the path of the cage being inclined downwardly toward the delivery end thereof, stop dogs on said casing section for holding the front wheels of a car elevated above the horizontal and overhanging the inclined rails of the track, said dogs being movable to drop the front wheels of the car onto the inclined track and thereby impart an abrupt initial impulse to the forward movement of the car from the caging section and onto the cage platform.

1,379,871. PUZZLE OF THE MOVIES. WILLIAM D. MCGUIRE, Jr., New York, N. Y. Filed Sept. 15, 1919. Serial No. 323,732. 2 Claims. (Cl. 46—25.)



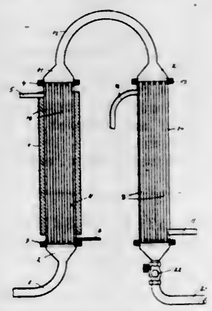
1. A puzzle or game comprising a set of cards, each having a picture or illustration thereon representing a scene or object pertaining to a theme, story or play, the scenes or objects on the cards bearing such a relation that when the cards are arranged in proper sequence they will portray the course of events in the story, play or theme.

1,379,872. HOOK OR EYE. BENJAMIN H. MARCUS, Brooklyn, N. Y. Filed Apr. 23, 1919. Serial No. 292,061. 5 Claims. (Cl. 24—228.)



1. In a device of the kind described the combination with a hemmed article having a depression, of a hook or eye member having shank portions inserted into the hem through the walls of the depression, and means for fastening the ends of the shanks in the hem.

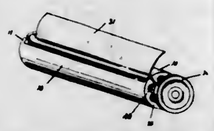
1,379,873. FUEL-SAVING ATTACHMENT FOR FURNACES. JOHN J. A. MILLER, Denver, Colo. Filed July 19, 1919. Serial No. 311,946. 6 Claims. (Cl. 110—55.)



1. In combination with a furnace door, of means defining an air passage therethrough, means for controlling the flow of air therethrough, means operative when the door is being opened to actuate the controlling means so as to permit free passage of air, means tending to hold the controlling means in open position, means tending to move the controlling means to closing position and time-controlled means set for operation when the door is opened for automatically releasing the controller-holding means.

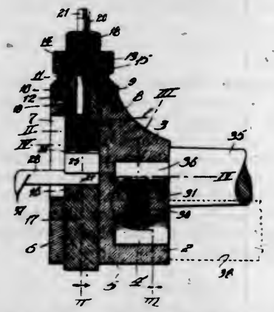
1,379,874. TRACTOR-HITCH. JOHN K. MILLER, Marshall, Minn. Filed Apr. 13, 1921. Serial No. 460,977. 6 Claims. (Cl. 213—67.)

1. A hitch of the class described comprising a draw-bar, a socket member in which an end portion of said bar engages, a member slidable upon the draw-bar inwardly of the socket member, a head, yieldable means connecting the head and the slidable member, a movable arm carried by the socket member and coacting with the applied draw-bar to hold the same in applied position, and means associated with said arm and operating upon contact with the slidable member for releasing the arm from the bar.



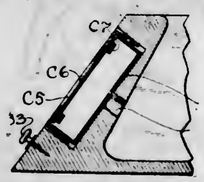
1,379,875. PROCESS FOR STERILIZATION OR PASTEURIZATION OF LIQUIDS. ANDRÉ MÜLERTZ, Copenhagen, Denmark. Filed Aug. 23, 1919. Serial No. 319,477. 2 Claims. (Cl. 99—15.)

2. The process of sterilizing liquids which consists in subjecting the liquid to a uniformly increasing tempera-



sion to limit the swinging movement of said holder in a downward direction; a stop on said lug adapted to contact with the bottom of said longitudinal groove to limit the swinging movement of said holder in an upward direction; a knife medially disposed in said holder having its cutting edge normally disposed in said longitudinal groove; and resilient means adapted to retain said knife holder in a normally retracted position.

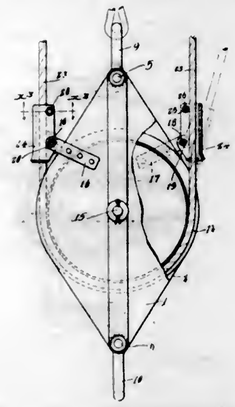
1,379,865. CIGARETTE-ROLLING DEVICE. ALBERT C. H. HOLDBROOK, Providence, R. I. Filed May 5, 1920. Serial No. 379,167. 3 Claims. (Cl. 131—5.)



2. A cigarette-rolling device comprising a divided frame having its halves hinged together, a plurality of elongated rolls arranged in a circle having their peripheries in close proximity to each other and having bearings in said frame halves, a gear on each roll, a main central hand-operated gear for engaging the gears on all of said rolls to rotate them in unison, said frame halves being adapted to be swung apart to receive the tobacco between the sets of rolls and then close, and means for locking the frame-halves in closed position.

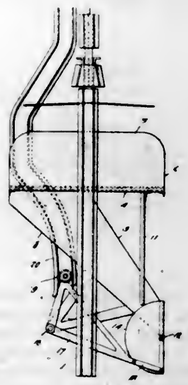
1,379,866. ADJUSTABLE OFFSET TOOL-HOLDER. CECIL L. HOLLINGSWORTH, St. Louis, Mo. Filed Apr. 5 1919. Serial No. 287,825. 4 Claims. (Cl. 82—37.)

1. A tool holder comprising a body portion, a tool adjustably carried by said body portion, means provided on said body portion whereby a revoluble element can be secured to said body portion, and other means whereby said body portion can be secured to a stationarily held element and clamping means carried by said body portion coöperable with either one of said elements.



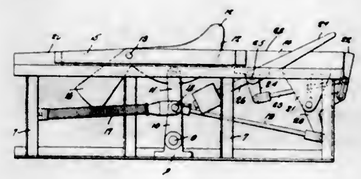
1,379,867. DISPLAY-CABINET. BURTON L. JOHNSON, Knoxville, Tenn. Filed Mar. 11, 1919. Serial No. 281,973. 4 Claims. (Cl. 211—9.)

1. In a structure of the nature described, a drawer having a front wall, a container fitted for frictional engagement in the front face of said front wall and the container having a window in its front wall.



2. In a structure of the nature described, a drawer having a fixed front wall in the outer face of which is a chamber, a container fitted into said chamber and comprising a body and a lid one of which has a window.

1,379,868. CABLE-GUARD FOR TACKLE-BLOCKS. JACK M. KELSEY, Brea, Calif. Filed May 24, 1920. Serial No. 383,703. 10 Claims. (Cl. 254—197.)

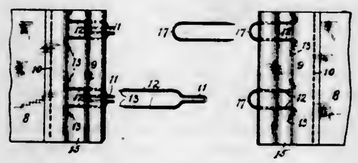


1. A cable guard combining a tackle-block having a frame and a cable sheave, a pivot rod carried by the frame and extended across the face of the sheave, a cable shoe loosely pivoted on said rod and adapted to embrace the sides and the outer surface of a cable rove around the sheave, and means carried by the shoe adapted to engage the inner surface of the cable to maintain the shoe in position.

1,379,869. MINE-SKIP. DANIEL F. LEPLEY, Connellsville, Pa. Filed July 12, 1920. Serial No. 395,589. 5 Claims. (Cl. 214—95.)

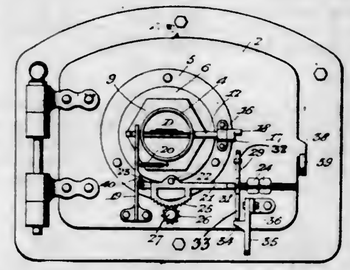
1. A device of the class described including a platform having a hinged floor section, a load holding skip portion below the platform, said floor section constituting a cover for the inlet end of the skip portion, and a combined closure and delivering chute at the discharge end of said skip portion.

1,379,870. GRAVITY-CAR CONTROL FOR MINE-HOISTS. DANIEL F. LEPLEY, Connellsville, Pa. Filed Jan. 22, 1921. Serial No. 439,204. 5 Claims. (Cl. 104—252.)



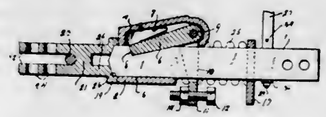
1. The combination with separate oppositely movable hoist cages, of a caging section adjacent the path of each cage and including a track having one end portion level and the remaining portion which is nearest the path of the cage being inclined downwardly toward the delivery end thereof, stop dogs on said casing section for holding the front wheels of a car elevated above the horizontal and overhanging the inclined rails of the track, said dogs being movable to drop the front wheels of the car onto the inclined track and thereby impart an abrupt initial impulse to the forward movement of the car from the caging section and onto the cage platform.

1,379,871. PUZZLE OF THE MOVIES. WILLIAM D. MCGUIRE, Jr., New York, N. Y. Filed Sept. 15, 1919. Serial No. 323,732. 2 Claims. (Cl. 46—25.)



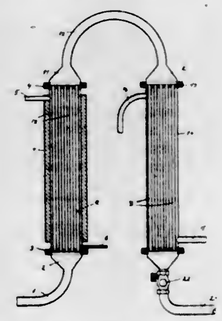
1. A puzzle or game comprising a set of cards, each having a picture or illustration thereon representing a scene or object pertaining to a theme, story or play, the scenes or objects on the cards bearing such a relation that when the cards are arranged in proper sequence they will portray the course of events in the story, play or theme.

1,379,872. HOOK OR EYE. BENJAMIN H. MARCUS, Brooklyn, N. Y. Filed Apr. 23, 1919. Serial No. 292,061. 5 Claims. (Cl. 24—228.)



1. In a device of the kind described the combination with a hemmed article having a depression, of a hook or eye member having shank portions inserted into the hem through the walls of the depression, and means for fastening the ends of the shanks in the hem.

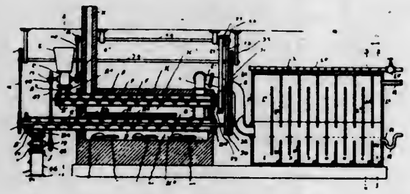
1,379,873. FUEL-SAVING ATTACHMENT FOR FURNACES. JOHN J. A. MILLER, Denver, Colo. Filed July 19, 1919. Serial No. 311,946. 6 Claims. (Cl. 110—55.)



1. In combination with a furnace door, of means defining an air passage therethrough, means for controlling the flow of air therethrough, means operative when the door is being opened to actuate the controlling means so as to permit free passage of air, means tending to hold the controlling means in open position, means tending to move the controlling means to closing position and time-controlled means set for operation when the door is opened for automatically releasing the controller-holding means.

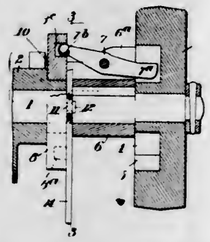
1,379,874. TRACTOR-HITCH. JOHN K. MILLER, Marshall, Minn. Filed Apr. 13, 1921. Serial No. 460,977. 6 Claims. (Cl. 213—67.)

1. A hitch of the class described comprising a draw-bar, a socket member in which an end portion of said bar engages, a member slidable upon the draw-bar inwardly of the socket member, a head, yieldable means connecting the head and the slidable member, a movable arm carried by the socket member and coacting with the applied draw-bar to hold the same in applied position, and means associated with said arm and operating upon contact with the slidable member for releasing the arm from the bar.



1,379,875. PROCESS FOR STERILIZATION OR PASTEURIZATION OF LIQUIDS. ANDRÉ MÜLERTZ, Copenhagen, Denmark. Filed Aug. 23, 1919. Serial No. 319,477. 2 Claims. (Cl. 99—15.)

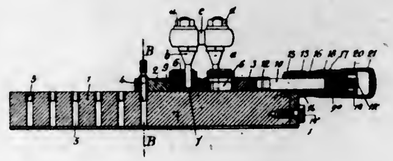
2. The process of sterilizing liquids which consists in subjecting the liquid to a uniformly increasing tempera-



ture while slowly passing vertically continuously in one direction at a pressure exceeding the pressure of saturated vapors of the treated liquid at the initial temperature of the heating medium, and then subjecting it to a uniformly decreasing temperature until cooled down to the temperature of the cooling medium while passing continuously in one direction under the same pressure.

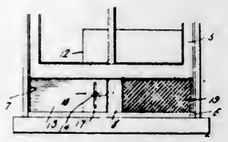
1,379,876. APPARATUS FOR DISTILLATION. CARL A. NOTTINGHAM and CARL TUHEY, Muncie, Ind., assignors, by mesne assignments, to American Nottingham Process Company, a Corporation of Kentucky. Filed May 16, 1919. Serial No. 297,502. 4 Claims. (Cl. 203—6.)

1. In an apparatus of the class described, in combination, a plurality of superposed retorts, inlet and discharge means at alternate ends of said retorts, means in the first inlet and in the last discharge means to pass material while preventing the passage of gaseous currents, the intermediate discharge and inlet means providing communication between retorts, means to subject said retorts throughout the entire extent of their heated portions to temperatures gradually increasing from a point adjacent the first inlet to a point adjacent the final discharge means, conveying means adapted to convey and agitate material from the inlet to the discharge means of each retort and an outlet for the distilled product.



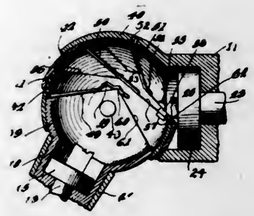
1,379,877. CLUTCH. EDWIN ROLKER, Baltimore, Md. Filed Nov. 3, 1915, Serial No. 59,340. Renewed Oct. 30, 1920. Serial No. 420,811. 6 Claims. (Cl. 192—28.)

1. In a clutch, driving and driven clutch members, a cam member adjustable independently of said member about their common axis and having an annular guideway provided with a cam, a latch on said driven member engaging said guideway and normally resting upon the cam portion thereof and adapted to be moved by said guideway into engagement with the driving member when the cam member is moved from normal position.



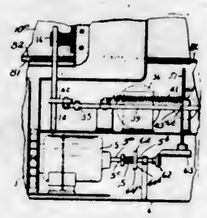
1,379,878. APPARATUS FOR SETTING GAGES. LOUIS ROUANET, Ivry-Port, France, assignor to Compagnie d'Applications Mecaniques, Ivry-Port, Seine, France. Original application filed Dec. 28, 1917, Serial No. 209,331. Divided and this application filed Feb. 21, 1919. Serial No. 278,439. 2 Claims. (Cl. 33—165.)

1. An apparatus for adjusting the dimensions of space gages comprising in combination a table or base, two sliding pieces movable upon said table each of them having a hole, a plug provided with a hole eccentric to its axis and mounted in each of said holes in the sliding pieces, the said holes of the two plugs being adapted to receive the



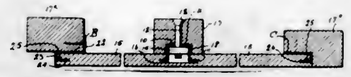
ends of the contact rods of the space gage, means for holding one of said sliding pieces in a fixed position on the table, and a micrometer screw mounted on the table and adapted to displace the other sliding piece along said table, substantially as described and for the purpose set forth.

1,379,879. WINDOW-REFRIGERATOR. VICTOR DE SCHEPPER, New York, N. Y. Filed Feb. 24, 1919. Serial No. 278,846. 1 Claim. (Cl. 45—104.)



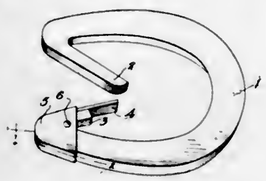
A provision safe for attachment to a window, comprising a box the interior of which is accessible from one side, and the opposite side wall of the box having an air-inlet opening the height of which is less than that of the box, and a vertically adjustable retaining slide carried by the last-mentioned side wall on the outside thereof and adjustable to project laterally from one end of the box, the height of the slide being also less than that of the box and corresponding to the height of the air-inlet opening.

1,379,880. DENTAL HANDPIECE. CHARLES C. SEABORN, Portland, Oreg. Filed Jul, 15, 1920. Serial No. 396,386. 10 Claims. (Cl. 32—11.)



3. A hand piece for dental engines comprising a handle section and a tool section, means hingedly connecting the sections together so as to permit the same to swing in various angles in relation to each other including a plurality of leaves, means automatically locking the leaves to hold the sections in their various adjusted positions, rigid stop members arranged to limit the movement of the leaves in relation to each other, a drive shaft carried by the handle section, a driven shaft carried by the tool section, and means operatively connecting these sections together.

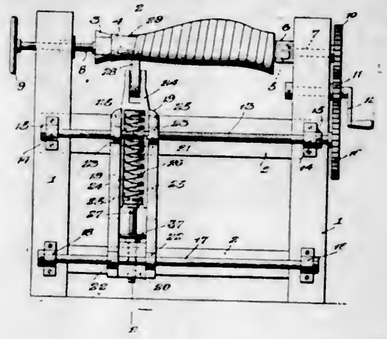
1,379,881. ARC STRIKING AND EXTINGUISHING APPARATUS. ELMER A. SPERRY, Brooklyn, N. Y. Filed July 22, 1916. Serial No. 110,753. 16 Claims. (Cl. 176—51.)



1. The combination with arc light electrodes, of a light shield and a movable arc striking member therefor and means responsive to changes in the energizing current for operating the shield and member.

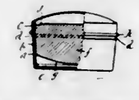
1,379,882. PANEL-CLAMP. WILLIAM A. SWARTZ, York, Pa. Filed May 28, 1919. Serial No. 300,288. 3 Claims. (Cl. 20—15.)

1. The combination with an upright and panels disposed thereagainst, the panels being provided in one face with a T-shaped slot and the upright with a recess, of means for holding the panel to the upright comprising a clamp bent to form a channel adapted to be disposed in the recess of the upright and having laterally disposed flanges, extending into the T-shaped slot of the panel, the bottom of said channel being perforated, and the post being correspondingly perforated, a nut disposed in and fitting the channel whereby the nut is held from turning, and a screw passing through the perforation of the upright and channel and engaging said nut.



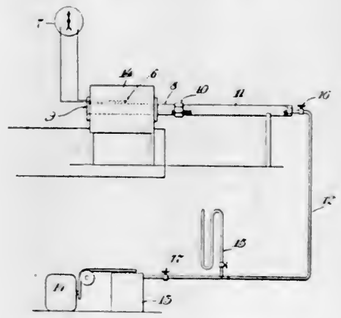
1,379,883. QUOIT. THOMAS H. TABOR, Ellijay, Ga. Filed Aug. 23, 1920. Serial No. 405,388. 5 Claims. (Cl. 46—65.)

3. In a device of the class described the combination of a horseshoe shaped body, arms pivotally mounted adjacent the terminals of said body, and means provided for holding said arms in a position so as to close the entrance to said body.



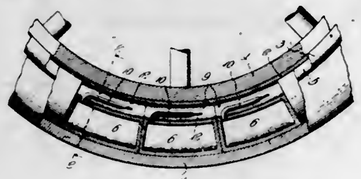
1,379,884. METHOD AND APPARATUS FOR MAKING ARTIFICIAL LIMBS OF FIBER. CHARLES W. THOMAS, St. Louis, Mo. Filed Sept. 8, 1920. Serial No. 408,884. 9 Claims. (Cl. 18—19.)

1. The method of making hollow artificial limbs of sheet fiber, consisting in shaping the sheet fiber to the required preliminary pattern, soaking the fiber until it becomes plastic, placing the plastic sheet fiber around a form, deforming the plastic fiber to the contour of the form by rolling pressure progressively applied to the material, and retaining the deformed fiber on the form until set by



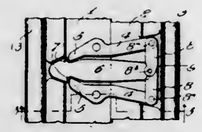
a band wound without deforming tension on the fiber in advance of the rolling pressure to be conformed thereby to the contour of the deformed material.

1,379,885. SOAP-BOX FOR SHAVING PURPOSES. WILLIAM JOSEPH TONER and JAMES JOHN TONER, South Kensington, England. Filed Aug. 10, 1920. Serial No. 402,655. 1 Claim. (Cl. 45—136.)



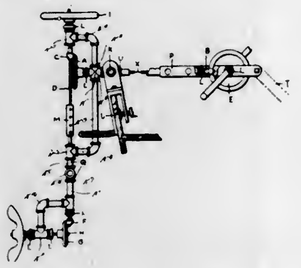
A soap box for shaving purposes having a tapered ring with a bead at the top and a beveled edge at the bottom, and two projections at the top, a tapered cup and a cover with two bayonet slots to engage with the projections at the top of the tapered ring, the said ring to support a special shaped soap tablet, substantially as described and shown on the accompanying drawings.

1,379,886. PROCESS OF REDUCING MAGNESIUM COMPOUNDS. LEONARD WALDO, Plainfield, N. J. Filed July 31, 1920. Serial No. 400,554. 3 Claims. (Cl. 75—183.)



1. A process of reducing a magnesium compound to metallic magnesium, which comprises finely dividing said compound; finely dividing metallic aluminum; intimately mixing the finely divided materials; closely compacting the mixture under pressure, and subjecting the consolidated materials to the action of a high degree of heat *in vacuo*, with the formation and distillation over of the metal magnesium.

1,379,887. PNEUMATIC TIRE. HARRY S. WILLIAMS, San Antonio, Tex., assignor of one-half to Otto Keller, San Antonio, Tex. Filed Oct. 10, 1919. Serial No. 329,846. 4 Claims. (Cl. 152—22.)

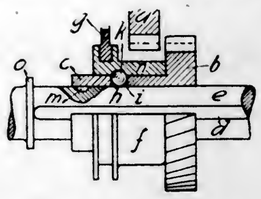


1. A device of the class described comprising a hollow arcuate tire section of a cross sectional shape to conform to the interior of a tire casing and provided on its rim side with a longitudinally extending channel dividing said rim side into a pair of rim engaging portions, the latter being disposed close together before said section is inflated and being separated by the pressure of the fluid in said section when the same is inflated.

1,379,888. SECTIONAL RIM. HARRY S. WILLIAMS, San Antonio, Tex., assignor of one-half to Otto Keller, San Antonio, Tex. Filed Jan. 19, 1920. Serial No. 352,472. 9 Claims. (Cl. 301—35.)

1. A rim comprising two circular abutting sections, coacting locking members carried by said sections, the locking members carried by one section being movable in and out of engagement with those carried by the other section, and means for actuating said movable members and holding them in interlocked position, said means being connected to and carried entirely by said movable members.

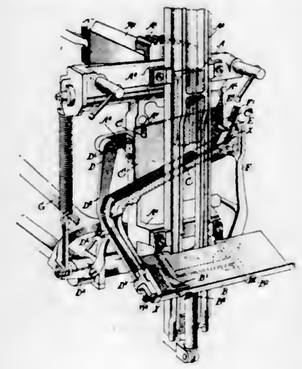
1,379,889. PORTABLE PROPELLING DEVICE. WILLIAM COVINGTON WILLIAMS, New Orleans, La. Filed May 25, 1918. Serial No. 236,662. 3 Claims. (Cl. 115—24.)



1. A portable propelling device of the class described, including an attaching bracket, a substantially U-shaped frame having its intermediate portion pivotally attached to said bracket, a propeller supporting bracket including relatively horizontal and vertical tubular portions, said vertical portion being attached to one end of the U-shaped frame, a fly-wheel carrying shaft journaled in the outer ends of the arms of the U-shaped frame and extending through the vertical portion of the propeller supporting bracket, and a propeller carrying shaft journaled in the horizontal tubular portion of the propeller supporting bracket and operatively connected with the fly-wheel carrying shaft.

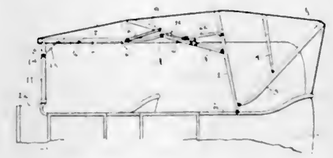
1,379,890. FOUNTAIN-PEN. PAUL E. WIRT, Bloomsburg, Pa. Filed June 30, 1920. Serial No. 393,134. 7 Claims. (Cl. 120—46.)

7. In a fountain pen, the casing having a member provided with a guide, an ink sack, a press-bar, an operating device for the press-bar, and a folded spring having a relatively loose guiding engagement with said guide and also having one member thereof rigidly connected with the press-bar while its other member bears against the casing part.



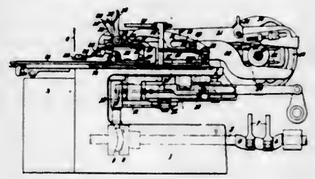
1,379,891. APPARATUS FOR OPERATING THE SLIDING WHEELS OF CHANGE-SPEED GEARS. ALBERT AICHELE, Baden, Switzerland. Filed Apr. 26, 1920. Serial No. 376,569. 5 Claims. (Cl. 74—58.)

5. In an apparatus for operating the sliding wheel of a change-speed gear with oblique teeth, the combination with said sliding wheel, a shaft along which said sliding wheel is adapted to slide, and a non-rotatable sleeve for shifting said sliding wheel along said shaft, of an extended hub on said sliding wheel located concentrically around said shaft between the latter and said non-rotatable sleeve, one or more annular grooves in the inner surface of said non-rotatable sleeve, a corresponding number of recesses in the periphery of said shaft, a corresponding number of holes extending right through the thickness of said hub, and a corresponding number of locking members (such as balls) having a radial thickness exceeding the radial thickness of said hub, located in said holes of said hub, whereby when said sliding wheel is out of mesh, said wheel is locked to said non-rotatable sleeve by said locking members projecting from the recesses of said hub into the annular grooves of said sleeve, whereas when said sliding wheel is in mesh with the selected gear wheel, said sliding wheel is locked to said shaft by said locking members projecting from the recesses of said hub into the recesses of said shaft, and also whereby when said sliding wheel is in mesh with the selected gear wheel, the axial thrust of the intermeshing wheels is taken by said locking members and transmitted to said shaft, and said sleeve is relieved thereby of said axial thrust.



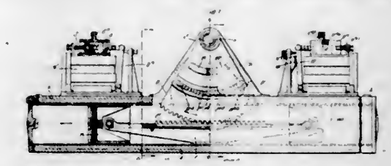
1,379,892. SLUG-CASTING MACHINE. WALTER ALDERDICE, New York, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Aug. 21, 1919. Serial No. 318,887. 22 Claims. (Cl. 199—61.)

4. In a slug casting machine, the combination of means for delivering the slugs from the mold, a galley wherein the slugs are stacked and having its entrance arranged remote from their point of delivery, an intermediate inclined chute or trough along which the slugs pass from the delivery means to the galley, the said chute extending first laterally across the machine in a direction at right angles to the plane of delivery of the slugs and then forwardly in a direction parallel to said plane to discharge



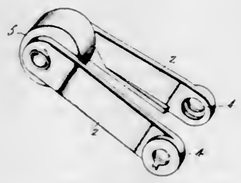
the slugs into the galley, and means for advancing the slugs in the galley in a direction opposite to that in which they are transported across the machine.

1,379,893. VEHICLE-TOP. CHARLES R. ALLEN, Ashtabula, Ohio, assignor to The Ashtabula Bow Socket Company, Ashtabula, Ohio, a Corporation of Ohio. Filed Jan. 15, 1915. Serial No. 2,363. 3 Claims. (Cl. 296—116.)



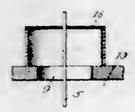
1. In a vehicle top, the combination of a main bow suitably attached to the vehicle body; an articulated auxiliary bow pivotally attached to said main bow; a supplemental bow pivotally attached to the inner portion of said auxiliary bow and adapted to interengage therewith in the raised position of the top; and a link connecting said supplemental bow with said main bow, said link having a lost-motion connection with one of said bows.

1,379,894. WORK-CLAMPING MECHANISM FOR SEWING-MACHINES. EDWARD B. ALLEN, Bridgeport, Conn., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Oct. 20, 1915. Serial No. 56,849. Renewed Sept. 17, 1918. Serial No. 254,512. 17 Claims. (Cl. 112—76.)



15. In a buttonhole sewing machine, a stationary frame, a traveling work-clamp sustained thereby, a buttonhole cutter, a cutter-operating shaft, a clamp-closing lever fulcrumed on said frame, and a cam operated connection distinct from said cutter-operating shaft between said buttonhole cutter and clamp-closing lever.

1,379,895. AUTOMATIC STABILIZING OR CONTROLLING MEANS FOR AIRCRAFT. GEORGES AVELINE, Soho, London, England, assignor to Raymond Roze-Perkins, Kensington, London, England; Henry Paget-Cooke and Edith Annie Hamilton Douglas-Hamilton executors of said Raymond Roze-Perkins, deceased. Filed Jan. 17, 1920. Serial No. 352,187. 11 Claims. (Cl. 244—29.)

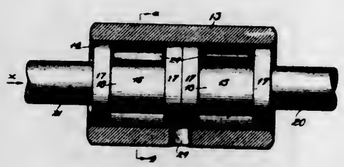


1. Controlling or stabilizing apparatus for aircraft comprising a mercury column in a container to form a gravity switch operated by relative movement between the mercury and container, means whereby said switch actuates electrical means for moving the aircraft controls to right the machine and for returning the controls to the normal position and means whereby the mercury column is placed under the influence of wind suction control produced as a result of the flight of the aircraft to counteract the effect of centrifugal force or inertia on the mercury column which is thereby controlled to insure that the required relative displacement between it and the container takes place.

1,379,896. CAST LINK PROVIDED WITH ANTIFRICTION-ROLLERS AND PROCESS OF MAKING SAME. LEO BETHKE, Milwaukee, Wis., assignor to Chain Belt Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 10, 1919. Serial No. 281,805. 2 Claims. (Cl. 74—32.)

2. A unitary link for power chains with side bars and a hollow crossbar on which latter is a free turning, unitary, undivided roller.

1,379,897. PRECIPITATOR FOR HOT GASES. LINN BRADLEY, East Orange, N. J., assignor to Research Corporation, New York, N. Y., a Corporation of New York. Filed Oct. 16, 1917. Serial No. 196,910. 16 Claims. (Cl. 183—7.)

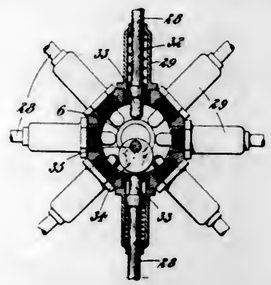


2. The combination with a closed electrical precipitator chamber for hot gases and a discharge electrode system within the chamber, of an electrical conductor passing through an opening in a wall of the chamber to the electrode system and a cover for said opening of transparent electrical insulating and heat insulating material.

1,379,898. SHADE-ROLLER. EMANUEL CARLSON, Yonkers, and MORDECAI WILLIAM RICHARD, New York, N. Y.; said Richard assignor to said Carlson. Filed Oct. 31, 1919. Serial No. 334,769. 4 Claims. (Cl. 156—36.)

4. In a shade roller having a roller body, a hollow cylindrical cap formed from a single piece of material open at one end and closed at the other end, means for securing said cap against movement on said roller body, a pair of pawls and supporting means for said pawls passing through said cap and through each of said pawls, whereby said cap serves as a support for said pawl supporting means and as the ferrule for the shade roller.

1,379,899. COUPLING. CHARLES W. CATHCART, Alexandria, Va. Filed May 10, 1919. Serial No. 296,073. 5 Claims. (Cl. 287—52.)



1. A coupling of the character described including a sleeve having a bore therein; a bushing having a shaft bore concentric with the bore of said sleeve and integral annular cylindrical flanges adapted to fit within the bore of said sleeve, the portion of said bushing between said flanges having an outer surface eccentric to the bore of said sleeve and out of frictional engagement with said sleeve; and a roller positioned between said eccentric surface and flange of the bushing and the surface forming the bore of said sleeve, said roller being adapted to wedge itself between said eccentric surface and the bore surface of said sleeve, said bushing being split outwardly from said shaft bore; substantially as described.

1,379,900. STORAGE-BATTERY PLATE AND PROCESS OF MAKING SAME. RUFUS N. CHAMBERLAIN, Chicago, Ill., assignor to Gould Storage Battery Company, a Corporation of New York. Continuation of application Serial No. 214,663, filed Jan. 31, 1918. This application filed Sept. 12, 1918. Serial No. 253,806. 3 Claims. (Cl. 204—29.)

1. A storage battery plate comprising a grid with active material pasted thereon, said active material having uniformly distributed therein particles of wood containing relatively little organic acid, the particles of wood being mostly of a size that just pass through screens of from 25 to 40 mesh to the inch and the quantity of wood particles present in the active material being about 1 part wood to 4 parts by volume of active material when dry.

1,379,901. MOTOR-TRACTOR. JOSEPH CONEY, Bath, England, assignor of one-half to The Lewis Trust Limited, London, England. Filed Oct. 19, 1920. Serial No. 418,095. 3 Claims. (Cl. 301—48.)

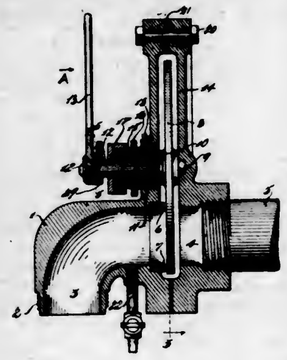
3. A traction device comprising, a tubular axle having an opening therein, a wheel revoluble thereon, traction elements movably mounted in said wheel, a spindle revoluble in said axle, an eccentric carried by said spindle

and adapted to be projected through the opening in said axle, and means for rotating said spindle to retract said eccentric to inoperative position within said axle.

1,379,902. HOUSE-GARMENT. MARGARET B. CRANK, Los Angeles, Calif. Filed Mar. 31, 1920. Serial No. 370,090. 5 Claims. (Cl. 2—145.)

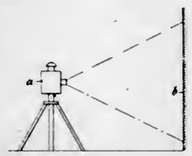
1. An outer garment comprising a single piece of material formed of a shoulder portion and front and back lobes folded and fastened at the edges to form a body with a neck portion, and a bib and waist band secured to the body at the neck and freely extending therefrom so that the waist band portion may be drawn about the waist of said body to provide a smooth vest and a girdle.

1,379,903. ROD SOCKET OR COUPLING. JAMES A. DAY, Oilfields, Calif. Filed May 1, 1920. Serial No. 378,225. 2 Claims. (Cl. 294—90.)



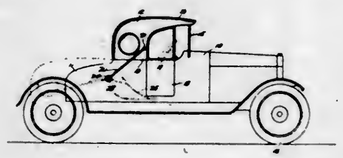
1. In a rod socket, a rod, a semi-circular member attached to said rod, a slide adapted to move on said semi-circular member, said slide and said semi-circular member forming a cylindrical socket, said slide having an L-shaped portion in sliding engagement with said rod, a spring mounted on said rod for the purpose of maintaining said L-shaped portion in contact with the end of said semi-circular member, and means for preventing the free end of said slide from disengagement with said semi-circular member.

1,379,904. PRESSURE-REDUCING VALVE. JOHN H. DERBY, New York, N. Y. Filed Dec. 20, 1916. Serial No. 138,097. 11 Claims. (Cl. 251—86.)



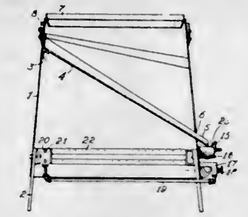
1. In a pressure reducing valve for use with high pressure supply lines, the combination with a pressure reducing valve fixture having an inlet and an outlet and a narrow edge valve seat between said inlet and said outlet, of a valve member movable across said seat and across the direct line of flow between said inlet and said outlet and coöperating with said seat both to close said

outlet and to provide graduated discharge openings, said valve member being entirely inclosed within said fixture,



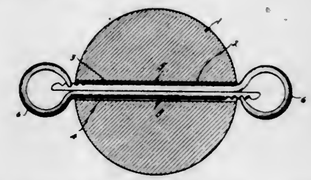
being constantly held against said seat by the fluid pressure and having its two sides freely exposed to inlet pressure except at said seat.

1,379,905. METHOD OF ANALYZING, TRANSMITTING, AND RECONSTRUCTING PICTURES OR THE LIKE. THOMAS MACREADY DOWN, Kew Gardens, England. Filed Nov. 24, 1920. Serial No. 426,237. 9 Claims. (Cl. 35—13.)



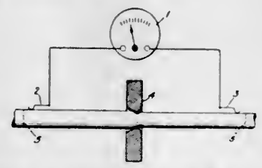
1. A method of analyzing, transmitting and reconstructing pictures, designs and the like, consisting in optically projecting said picture on an exaggerated scale on to a surface subdivided into spaces by intersecting lines, estimating the characteristics of the portions of said picture contained in each said space, transmitting code descriptions of said characteristics associated with code definitions of said spaces, inserting said transmitted characteristics in corresponding spaces of a large surface correspondingly subdivided by intersecting lines and reducing the picture reproduced on said second surface.

1,379,906. CONVERTIBLE AUTOMOBILE-TOP. BEN BROWN ELLERBECK, Washington, D. C. Filed Dec. 9, 1919. Serial No. 343,564. 3 Claims. (Cl. 296—107.)



2. The combination with a vehicle body having a seat and a top supporting edge, of a rigid top detachably supported on said body edge, and swinging supporting arms at opposite sides of the body connected thereto, and to the said top and upon which the latter is swingable rearwardly and downwardly from the seat and independently tiltable to form a cover for the lower rear portion of the body, as described.

1,379,907. REPAIRING-STAND. GEORGE W. FAGAN, Cedar Falls, Iowa. Filed Apr. 13, 1920. Serial No. 373,615. 2 Claims. (Cl. 113—59.)

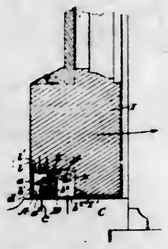


1. In a device of the character described, a hollow casing open at top and bottom, an inclined trough removably mounted across the interior of said casing, said casing having a port through which said trough delivers its contents, an open receptacle removably supported on said casing to receive from said trough, a hopper removably supported in the open top of said casing to deliver into said trough, elongated heating means supported within the lower part of said casing under said trough, and other heating-means supported without said casing under said open receptacle.

1,379,908. COTTER-PIN. HAROLD ROBERT FRANCIS, Los Angeles, Calif., assignor of one-half to Peter W. Francis, Muscatine, Iowa. Filed Dec. 12, 1919. Serial No. 344,323. 4 Claims. (Cl. 74—8.)

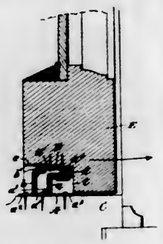
1. As a new article of manufacture, a cotter pin comprising a pair of members, said members comprising straight portions having notches therein adjacent one end, integarl curved tongues on the other ends of said members and said members being identical.

1,379,909. METHOD OF DETERMINING TEMPERATURES IN METAL-WORKING. OLIVER C. GILBERT, New York, N. Y. Filed June 21, 1919. Serial No. 305,756. 6 Claims. (Cl. 73—32.)



1. The method of determining the temperature of a metal or alloy as it passes through a die, which involves a measurement dependent upon a movement of the metal or alloy and proportional to the electromotive force developed by the thermo-couple formed by the drawn and undrawn metal or alloy while it is passing through the die.

1,379,910. WEATHER-STRIP. JOSEPH P. GLASER, Detroit, Mich., assignor to Chamberlin Metal Weather Strip Company, Detroit, Mich. Filed Sept. 27, 1917. Serial No. 193,521. 2 Claims. (Cl. 20—69.)

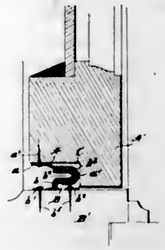


1. A sill strip for casement windows and the like comprising a metal member having two spaced upwardly ex-

tending flanges and an intermediate connecting portion, and an associated member adjustably interfitting with the other member formed of an independent strip of metal folded upon itself to provide a double walled upstanding flange and a horizontally extending base flange at one side

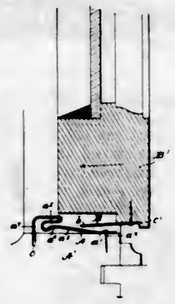
thereof, the opposite walls of the double walled flange being separated from each other to provide a space therebetween, one of the upwardly extending flanges of the other member being disposed within and adapted to be positioned at different points within said space in the adjustment of the members relatively to each other.

1,379,911. WEATHER-STRIP. JOSEPH P. GLASER, Detroit, Mich., assignor to Chamberlin Metal Weather Strip Company, Detroit, Mich. Filed Sept. 27, 1917. Serial No. 193,522. 3 Claims. (Cl. 20—69.)



1. The combination with a casement window including a swinging sash, and a window frame having a sill, of a weather strip comprising a metal strip element secured upon the lower face of the sash rail, said strip element having a substantially hook shaped part forming a pocket at one side marginal portion thereof and a flat downwardly inclined sealing portion at its other side marginal portion; and a metal strip element secured upon the upper face of the sill of the window frame, said last mentioned strip element having a pair of upstanding flanges separated from each other to form a channel therebetween, one of the flanges having its upper portion bent outwardly at an angle, the outwardly bent portion fitting within the pocket of the sash strip, and the other of said flanges being flat and extending vertically, said last mentioned flange having a flat upper portion extending at an upward inclination corresponding to the angle of inclination of and fitting flat against the outer face of the downwardly inclined sealing portion of the sash strip over a substantial area transversely of the strips when the sash is in closed position.

2. The combination with a casement window including a swinging sash, and a window frame having a sill, the lower rail of the window sash being provided with a rabbet at its lower outer marginal portion, of a weather strip comprising a metal strip element secured upon the lower face of the sash rail, said strip element having a substantially hook shaped part forming a pocket at one side marginal portion thereof and a flat downwardly inclined sealing portion at its other side marginal portion extending from the inner wall of the rabbet in the sash; and a metal strip element secured upon the upper face of the sill of the window frame, said last mentioned strip element having a pair of upstanding flanges separated from each other and providing a channel therebetween, one of said flanges having its upper portion bent outwardly at an angle, the outwardly bent portion fitting within the pocket of the sash strip, and the other of said flanges having a flat upper portion extending at an upward inclination over and flat against the outer face of the downwardly inclined sealing portion of the sash strip with its upper marginal portion extending beneath the upper wall of the rabbet in the sash and fitting against the said upper wall at the inner edge thereof when the sash is in closed position, said straight upper inclined portion of one strip and the straight downwardly inclined portion of the other strip being of substantial width and fitting against each other over a substantial area transversely of the strips.

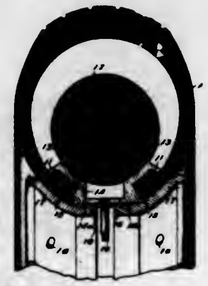


3. The combination with a casement window including a swinging sash, and a window frame having a sill, of a weather strip comprising a metal strip element secured upon the lower face of the sash rail, said strip element having a substantially hook-shaped part forming a pocket at one side marginal portion thereof and a flat downwardly inclined sealing portion at its other side marginal portion; and a metal strip element secured upon the upper face of the sill of the window frame, the last mentioned strip element being constructed from a single strip of flexible sheet metal doubled upon itself intermediate its side edges at different points to provide a pair of upstanding double walled flanges spaced apart, with an intermediate horizontal connecting base portion, and horizontal base flanges at the sides of the upstanding flanges, one of said upstanding flanges having its upper portion bent outwardly at substantially right angles, said outwardly bent portion being adapted to fit within the pocket of the sash strip, and the other of said upstanding flanges having an upper flat portion extending at an upward inclination corresponding to the angle of inclination of and adapted to fit flat against the outer face of the downwardly inclined sealing portion of the sash strip when the sash is in closed position.

1,379,912. WEATHER-STRIP. JOSEPH P. GLASER. Detroit, Mich., assignor to Chamberlin Metal Weather Strip Company, Detroit, Mich. Filed Sept. 27, 1917. Serial No. 193,523. 3 Claims. (Cl. 20—69.)

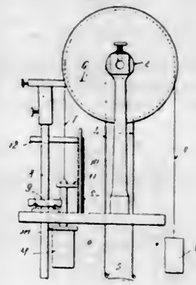
1. The combination with a casement window or the like including a swinging sash, and a window frame having a sill, of a weather strip comprising two coöperating strip elements secured upon the bottom rail of the sash and the sill of the window frame respectively, one of said strip elements having a tubular part open at one side, and the other strip element being provided with an upstanding part having at its upper end a tubular portion extending laterally to one side thereof and open at one side, the last mentioned tubular portion being of a size and shape corresponding to the interior of the tubular part of the other strip element to fit within the same with its outer face throughout in close contact with the inner face of the other tubular part throughout the same when the window sash is in closed position, the open side of the inner tubular portion of one of the strips facing outwardly and providing a channel at one side of the interfitting tubular parts of the strips beneath the outer marginal edge of the inner tubular part.

1,379,913. WEATHER-STRIP. JOSEPH P. GLASER, Detroit, Mich., assignor to Chamberlin Metal Weather Strip Company, Detroit, Mich. Filed Sept. 27, 1917. Serial No. 193,524. 2 Claims. (Cl. 20—69.)



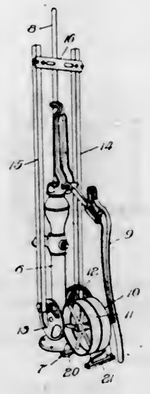
1. The combination with a casement window or the like, the sill of the casing being provided with a groove extending inwardly from the face thereof, of a weather strip comprising a strip member constructed from resilient sheet metal, the strip being secured along one side marginal portion to the sill of the casing, the strip from said marginal portion extending upwardly away from the face of the sill, said strip at its free edge portion being provided with a pocket, and with a portion connected with and extending forwardly from the upper wall of the pocket and downwardly around the pocket and slidably fitting into the groove in the sill, and a second strip member secured to the bottom rail of the sash and provided with a sealing portion adapted to depress the upwardly extending portion of the other strip member and to fit within the pocket of said strip member when the sash is moved to closed position.

1,379,914. METHOD OF TREATING POTASH-BEARING SILICATES. WALTER GLAESER, Brooklyn, N. Y., assignor, by mesne assignments, to Potash Extraction Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 9, 1916. Serial No. 77,319. 12 Claims. (Cl. 23—22.)



3. In a method of treating feldspar, the steps which consist in mixing powdered amorphous feldspar with a water soluble salt and a reducing contact substance, and then heating the mixture at a temperature above 900° C.

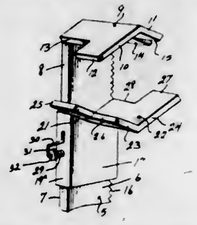
1,379,915. PNEUMATIC TIRE. JOSEPH GUAGLIARDO, Hammond, La. Filed May 21, 1920. Serial No. 383,203. 5 Claims. (Cl. 152—10.)



1. A pneumatic tire consisting of an outer inflatable casing forming an air chamber therein, an inner resilient core normally spaced from the outer side and tread portions of the wall of the casing and located within the air chamber and means to clamp the inner portions of the side walls of the casing, said means forming a rigid support for the core as described.

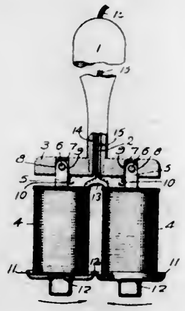
1,379,916. APPARATUS FOR RECORDING VARIOUS PHENOMENA BY THE MOVEMENT OF THE RECORDING-STRIP. FRANÇOIS GUEUGNON, Paris, France. Filed Feb. 23, 1918. Serial No. 218,880. 1 Claim. (Cl. 234—36.)

An apparatus for recording two movements of any desired character comprising in combination, a pulley, means for rotating said pulley according to any desired law, a drum operatively connected to said pulley, a paper strip passing over said drum and hanging loosely therefrom, weights carried by the paper strip and adapted to stretch the same, means for causing the adherence of the paper strip to the surface of the drum, a recording point adapted to contact with a freely hanging part of the paper strip, and means for moving said recording point according to any desired law, substantially as described and for the purpose set forth.



1,379,917. PUMP-JACK. RALPH W. E. HAYES, Galva, Ill., assignor of one-half to Hayes Pump and Planter Company, Galva, Ill., a Corporation of Illinois. Filed Sept. 7, 1916. Serial No. 118,861. 3 Claims. (Cl. 74—14.)

3. In combination with a pump stand upstanding from a stationary surface, a jack framework provided with a pedestal having a base located immediately adjacent the pump stand, and provided with attaching points at widely varying distances from the pump stand or the like to afford rigid securement for the pedestal independently of additional connection with the pump stand or the like, a clamping bracket carried by the framework at a point above and standing inwardly from the base of the pedestal and adapted for clamping attachment to the pump stand or the like to supplement the support afforded by the base of the pedestal, a transverse bearing carried by the framework on the near side of the pump stand or the like, a shaft working in said bearing, a crank disk on each end of said shaft, one of said crank disks being provided with a gear wheel, means for attaching a pitman to each crank



shaft, a stub axle secured to the framework at a position adjacent to the aforesaid gear wheel and extending sidewise toward the other crank disk, a driving pulley mounted on said axle, means for entraining said driving pulley with said gear, and a loose pulley freely mounted on said axle adjacent to the driving pulley, substantially as described.

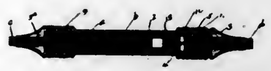
1,379,918. ADJUSTABLE SOCKET-WRENCH. FRANK J. HERMAN, Los Angeles, Calif. Filed Oct. 11, 1920. Serial No. 416,059. 2 Claims. (Cl. 81—132.)

1. An adjustable socket wrench comprising a shank, a stationary socket jaw carried by the shank, a slidable socket jaw on said shank, a portion of each jaw being arranged to intersect the opposite jaw upon movement of the slidable jaw toward the stationary jaw.

1,379,919. MAGNETIC-WAVE THERAPEUTIC APPARATUS. THOMAS H. HERNDON, Washington, D. C. Filed Aug. 2, 1920. Serial No. 400,609. 5 Claims. (Cl. 174—177.)

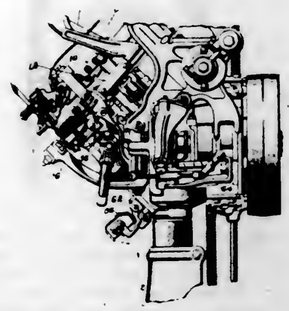
1. In a magnetic wave thereapeutic apparatus independently vibratorily mounted magnets, and a support therefor on which they are mounted for movement toward and from each other and resilient means tending to normally keep said magnets separated.

1,379,920. EMBROIDERY-KNIFE. LOUIS HERZOG, Beacon, N. Y. Filed Sept. 9, 1918. Serial No. 253,211. 4 Claims. (Cl. 30—14.)



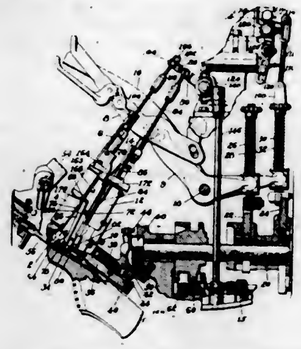
1. A device of the class described consisting of a knife having a blade holder provided with a seat for a detachable blade, a heel at the forward end of said holder and disposed at right angles to a blade held in said seat, a blade having a pointed end and an arched back and means for detachably securing said blade in said seat whereby the forward end of the blade will rest against said heel.

1,379,921. AEROFOIL FOR AEROPLANES. ALEXANDER ALBERT HOLLE, Westminster, London, England. Filed Aug. 11, 1919. Serial No. 316,919. 6 Claims. (Cl. 244—12.)



1. In an aerofoil for aeroplanes, the combination of a rigid main part which comprises a main spar, a series of rigid ribs or formers carried by said spar the forward ends of which do not extend as far as the nose or leading edge, and covering surfaces carried by said ribs or formers and extending between said main spar and the rear or trailing edges; and a flexible forward part comprising a series of elastic members carried by the main spar, a rigid nose carried by said elastic members, a series of flexible elements extending between and carried by the main spar and the nose, a series of flexible elements carried by the nose and extending between said nose and said main spar, and covering surfaces carried by said flexible elements.

1,379,922. ERASING AND POLISHING DEVICE. OTTO K. ISENSEE, Chino, Calif. Filed May 20, 1919. Serial No. 298,385. Renewed Apr. 19, 1921. Serial No. 462,797. 7 Claims. (Cl. 120—37.)



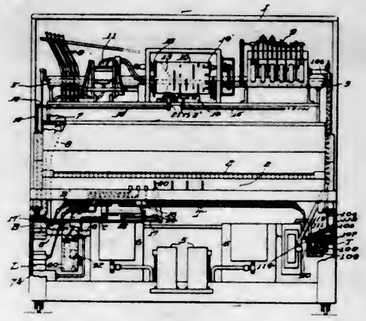
2. A device of the character disclosed, comprising a tubular holder member, a surface-treating element housed within the holder member and adapted to project from one end thereof for application to a surface to be treated, and means coöperating with the holder member to produce projection of such surface-treating element from one end of said holder member; said surface-treating material being provided with a threaded ferrule, and said tubular holder member being internally threaded to co-act therewith; means being provided for turning said ferrule relative to said holder member to advance said surface-treating material; a mouth-piece being applied over said holder member and through which said material is adapted to be projected, said mouth-piece being rotatably connected with said holder member and being so formed as to permit projection of said surface-treating material, but to prevent turning of the same within the mouth-piece.

1,379,923. MACHINE FOR SHAPING UPPERS TO LASTS. BERNHARDT JORGENSEN, Beverly, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 18, 1917. Serial No. 169,557. 45 Claims. (Cl. 12—4.)

1. In a pulling-over machine, the combination with means for pulling an upper at the toe end and at opposite sides of a last at one operation including a gripper for engaging the upper at the toe end of the last and means for operating said gripper to pull the upper, of means for engaging the margin of the shoe sole to position it at the toe end of the last during the upper pulling operation, and means operatively connected to said margin engaging means for moving it in a direction lengthwise of the sole after the upper has been tensioned.

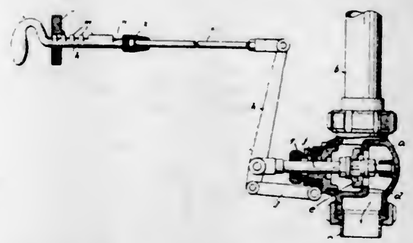
1,379,924. MACHINE FOR SHAPING UPPERS TO LASTS. BERNHARDT JORGENSEN, Beverly, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 19, 1917. Serial No. 169,756. 85 Claims. (Cl. 12—4.)

1. In a pulling-over machine, an upper engaging gripper, a hold-down mounted on the gripper for engaging the margin of the sole of the shoe, and means for moving the gripper to pull the upper and for simultaneously moving the hold-down in the direction of the sole to position the margin of the sole with reference to the last.



1,379,925. BACK-SCRUBBING DEVICE. UTAKICHI KAWASAKI, San Francisco, Calif. Filed Jan. 28, 1920. Serial No. 354,613. 2 Claims. (Cl. 15—26.)

1. A scrubbing device comprising a scrubbing element, flexible operating elements, and strips connecting the operating elements and extending over and upon opposite sides of said scrubbing element.

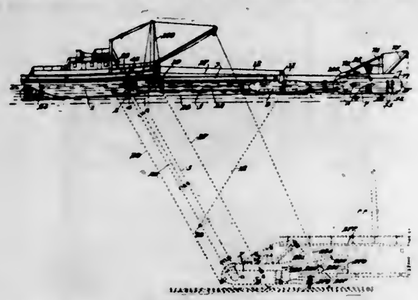


1,379,926. PLAYER-PIANO. OTIS M. KENNEDY, Philadelphia, Pa., assignor to The Cunningham Piano Company, a Corporation of Pennsylvania. Filed Oct. 8, 1917. Serial No. 195,296. 13 Claims. (Cl. 84—33.)

1. A player piano comprising, in combination, pneumatics, including connecting devices, operating to vary the position of the hammer rest rail and thereby actuating the treble, bass and loud pedal instrumentalities, respectively, player pneumatics, pneumatically-actuated valvular means operatively interposed in the main suction conduit leading to the player pneumatics and operative to maintain a uniform operative tension therein regardless of a higher tension created in the main source of pneumatic tension, and manually actuated valvular means having ports and passages adapted to be successively brought into communication with each of said sets of pneumatics, and operable to selectively control the operation of said pneumatically-actuated regulating valve as also, independently, control the tension in each of said first mentioned pneumatics for operatively adjusting the effective position of each of said expression instrumentalities, at the will of the operator.

3. In a player piano, the combination with player pneumatics for operating the string hammers of the piano in accordance with perforations in a music roll, a main source of pneumatic tension including a suction conduit leading therefrom and operatively connected to each of said pneumatics, a divided valve chamber interposed in said conduit and having a connecting passage way between its chambers, pneumatically-actuated valvular means controlling said passage way and operative to control the pneumatic tension delivered through the same from said source of tension to said player pneumatics, and a manually actuated valvular device for establishing communication with the atmosphere and thereby throwing into and out of operation said pneumatically-actuated valvular controlling means.

1,379,927. VALVE OPERATING AND LOCKING MECHANISM. STRICKLAND L. KNEASS, Philadelphia, Pa., assignor to William Sellers & Company, Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 15, 1919. Serial No. 338,316. 8 Claims. (Cl. 137—139.)



1. In valve operating and locking mechanism, the combination with a valve, a valve actuating mechanism including a slidable and rotatable member adapted in its sliding movement to actuate the valve, said member having a series of notches, and a member having two teeth in different planes, one tooth being arranged to engage the notches when the nember is turned in one direction while the other tooth is arranged to engage the notches when said member is turned in the other direction to lock said member from sliding longitudinally.

1,379,928. SUBMARINE SALVAGING AND EXPLORING APPARATUS. SIMON LAKE, Milford, Conn. Filed Feb. 7, 1920. Serial No. 356,947. 27 Claims. (Cl. 61—69.)

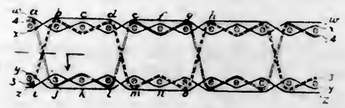
1. In apparatus of the kind described, a surface vessel, a submersible vessel, means connecting these vessels,

floats pivotally projected from said surface vessel and cables connected with said connecting means and co-

operating with said floats whereby said cables are cushioned.

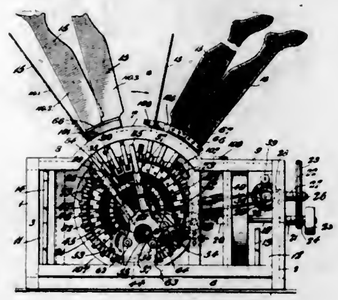
1,379,929. AIR-TUBE FOR PNEUMATIC TIRES AND MOLD THEREFOR. THOMAS BAKER MCLEROTH, London, England. Filed Nov. 24, 1920. Serial No. 426,115. 7 Claims. (Cl. 18—38.)

1. A mold for the production of an air tube for a pneumatic tire as set forth, comprising two outer sections divided on a substantially central plane and adapted to be clamped together, a plurality of cores within said sections, means carried by said sections and (or) by said cores for producing in the tube the apertures through which the compartments communicate with the feed passage and the slits or apertures through which the cores are to be withdrawn, and, if required, means for producing the feed passage integrally with the air tube.



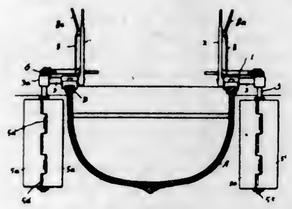
1,379,930. TATTING-HOOK. MINNIE C. MOUSER, San Diego, Calif. Filed Dec. 6, 1917. Serial No. 205,817. 1 Claim. (Cl. 66—10.)

A tatting device including a finger engaging thimble, a straight stem projecting from the closed end of the thimble in longitudinal alinement with the longitudinal axis of said thimble, said stem being sharply pointed at its outer end and being provided with a barb having a rearwardly directed point and which merges into the pointed end of the stem.



1,379,931. PILE FABRIC. FREDERICK OTT, Norristown, Pa., assignor, by mesne assignments, to A. T. Baker & Company, Inc., Manayunk, Pa., a Corporation of Pennsylvania. Filed Apr. 11, 1919. Serial No. 289,290. 4 Claims. (Cl. 139—9.)

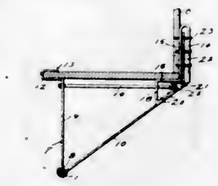
4. A cut pile fabric comprising weft threads, pairs of binder warp threads, and two sets of cut warp threads out of longitudinal alinement, between each pair of binder warp threads, each pile warp thread passes from the front about successive weft threads and back to the front, the threads of one set of pile warp threads being staggered with relation to the threads of the other set, portions of each binder adjacent to the pile warp threads floating over the back of the weft threads which are inter-



woven with the pile warp threads, while the adjacent portions of the companion binder warp threads are interwoven with the weft threads and the pile warp, the arrangement being such that the binder warp threads will not pass around the weft threads with an adjacent pile warp thread.

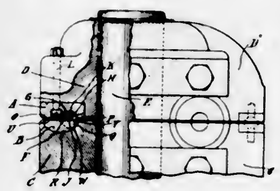
1,379,932. DRYING-MACHINE. BERTRAND A. PARKES, Philadelphia, Pa. Filed Nov. 19, 1919. Serial No. 339,143. 9 Claims. (Cl. 34—12.)

7. A drying machine which comprises in combination:—a casing having a slotted cover,—a drying chamber within said casing opening beneath said slotted cover,—means for circulating a heating medium through said chamber,—a form-carrying disk rotatable within said drying chamber,—a plurality of article-carrying forms connected with said disk and adapted to be both turned and tilted with relation thereto,—means for intermittently rotating the disk and forms,—and means for both turning and tilting the forms relatively to the disk and casing, whereby the forms may be moved both into and out of the drying chamber through the slots in the cover.



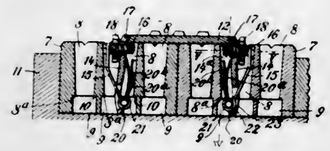
1,379,933. BOAT-PROPELLING DEVICE. CHARLES F. PARKS, Fairmount, Ind. Filed Sept. 19, 1919. Serial No. 324,805. 2 Claims. (Cl. 115—21.)

1. A rowing device, comprising a primary lever, a shaft to which the lever is secured, a journal bearing for the shaft, an arm journaled in the said shaft at an angle to the axis of said shaft, a secondary lever carried by



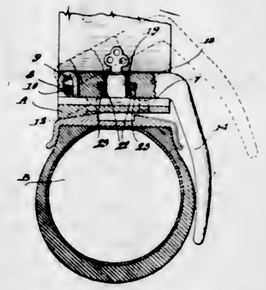
the primary lever, connections between the arm and the said secondary lever that cause the said arm to be shifted rotatively a predetermined distance when the secondary lever is operated, blades collapsibly carried by the said arm adapted to assume a spread position of resistance to the water when the primary lever is moved in one direction, and to assume a collapsed position when the said lever is moved in the opposite direction.

1,379,934. BRACKET. CHARLES HERMAN PASCHKE, Buffalo, N. Y. Filed Jan. 11, 1921. Serial No. 436,478. 4 Claims. (Cl. 248—18.)



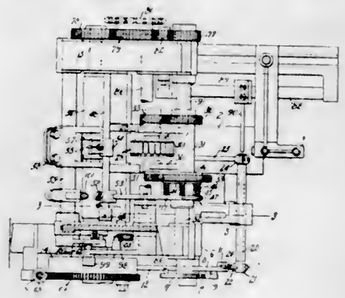
1. A bracket comprising a length of metal bent intermediate its ends to form upright and inclined arms, the terminal portion of the upright arm being formed with a shelf supporting member, the upper portion of the inclined arm being formed with a U-shaped attaching member having spaced arms, one of the arms of said U-shaped attaching member being formed with a loop engaged with said inclined arm and constituting a shelf supporting member.

1,379,935. CENTERING DEVICE. ARTHUR E. PETERS, Littleton, Colo., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Apr. 15, 1920. Serial No. 374,178. 5 Claims. (Cl. 76—5.)



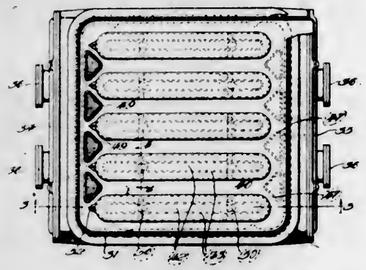
1. A centering device for centering cylindrical articles comprising two relatively movable members, one having a clamping recess and the other having a clamping surface, and including means for automatically moving said member having the clamping surface to center and clamp articles of different sizes between the members at a constant distance from a given base.

1,379,936. PRINTING APPLIANCE. JOHN P. QUIGGAN, Brooklyn, N. Y. Filed Feb. 14, 1918. Serial No. 217,069. 6 Claims. (Cl. 101—383.)



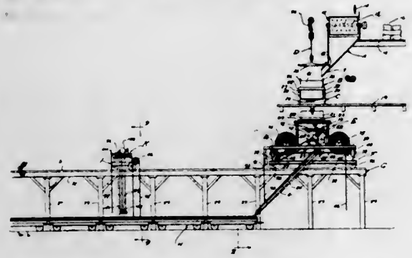
1. In a printing appliance, the combination of a base block having a series of annular openings therein formed with shoulders adjacent to their lower ends, and a printing plate adapted to be positioned thereon, of means for positively fastening the printing plate to said block, said means comprising a clamping device formed for location within an opening in said base block and provided with a plate-engaging jaw at its upper extremity, the lower extremity of said device having a surface adapted to engage with said shoulder, and means carried by said device and operable to function said jaw whereby the plate will be immovably held on said base.

1,379,937. LOCK FOR SPARE RIM AND TIRE CARRIERS. EARL J. RENFROW, Modesto, Calif. Filed Nov. 25, 1919. Serial No. 340,504. 4 Claims. (Cl. 224—29.)



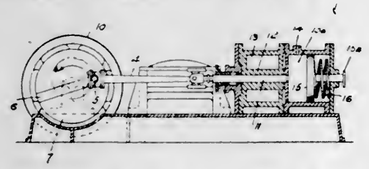
4. The combination with a spare tire and rim carrier, of a lock therefor including an upstanding slotted ear, a transversely extending locking lever, a pivot pin carried by the locking lever and slidably and rotatably positioned in the slot in said ear, the lever including a body arranged to overlie the carrier, and a right angularly extending relatively broad operating handle arranged to engage the tire and rim when the lever is moved into operative position, and means arranged on the carrier for releasably engaging the lever to hold the same against accidental displacement.

1,379,938. SHEET-FEEDING MACHINE. GEORGE A. ROBINSON, Quincy, Mass., assignor to Pneumatic Scale Corporation, Limited, Quincy, Mass., a Corporation of Maine. Filed May 4, 1920. Serial No. 378,849. 32 Claims. (Cl. 271—38.)



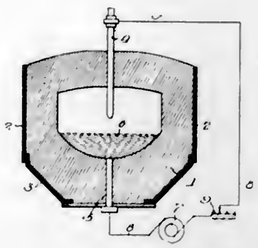
4. In a sheet feeding machine in combination, a combing roll and a shaft therefor, means for constantly rotating said combing roll, a rotating ratchet driven from the combing roll shaft through a yieldable friction drive, means for lowering the combing roll to act on the top of a pile of sheets and tripping means controlled by the advancing edge of a combed out sheet to stop the rotation of the said friction driven ratchet and thereby through the frictional resistance of the friction drive, to raise said combing roll out of engagement with the top of the pile of sheets.

1,379,939. AMMONIA-STILL AND THE LIKE. ARTHUR ROBERTS, Evanston, Ill., assignor to American Coke & Chemical Company, Chicago, Ill., a Corporation of Maine. Filed July 6, 1920. Serial No. 394,306. 7 Claims. (Cl. 203—1.)



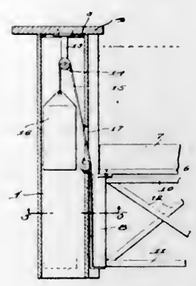
4. In a device of the class described, a tray for a vaporizing unit having a series of elongated parallel openings, an upstanding collar surrounding each of said openings, a bell in conjunction with each opening and having a downwardly depending flange encircling the corresponding collar, one end of each bell being rounded, there being a series of overflow openings in the tray, and a triangular upstanding flange in conjunction with each of said openings, each flange having its apex located between the ends of the adjacent bells, substantially as and for the purpose set forth.

1,379,940. PROCESS AND MEANS FOR MAKING PLASTER-BOARD AND THE LIKE. JOHN SCHUMACHER, Los Angeles, Calif. Filed May 10, 1920. Serial No. 380,097. 18 Claims. (Cl. 154—2.)



1. The herein disclosed process of handling plaster board and the like, which consists in continuously forming flexible plaster board, reciprocating the forming mechanism above a receiver, and flowing said plaster board upon said receiver during travel of said mechanism so that the board is stacked in layers on said receiver.

1,379,941. DEVICE FOR DRIVING SHAFTS. WALTER SMEDLEY, Crewe, England. Filed Jan. 24, 1920. Serial No. 353,856. 3 Claims. (Cl. 74—14.)



2. In combination with a power shaft, a crank pin on the power shaft, a slotted rotatable element, eccentric to the power shaft and engaged by the crank pin, and a plunger interconnected with said pin adapted to compress a fluid during one arc of movement of the slotted element, which compression energy is reimparted at a greater mean leverage to the power shaft during another arc of movement.

1,379,942. ELECTRIC FURNACE AND METHOD OF OPERATING SAME. FREDERICK T. SNYDER, Oak Park, Ill., assignor to Industrial Electric Furnace Company, Chicago, Ill., a Corporation of Indiana. Filed Oct. 23, 1913. Serial No. 796,746. 22 Claims. (Cl. 204—64.)

1. The method of regulating the temperature of an electric furnace having refractory heat insulating walls and provided with a resistor having a negative temperature coefficient, which consists in subjecting the circuit of the electric supply to means which decreases the energy developed in the furnace with an increase in the current flow through said resistor.

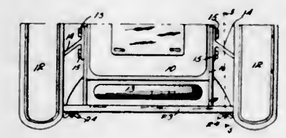
1,379,943. CHAIR FOR INFIRM PEOPLE. SIDNEY STEVENS, Millinocket, Me. Filed Sept. 21, 1920. Serial No. 411,782. 6 Claims. (Cl. 155—88.)

1. A chair having a seat which is movable in a straight vertical path, posts forming a part of the frame of the chair, weights having flexible connections with said seat, said flexible connections running over supports on said posts, whereby the downward pull of the weights tends to pull the seat upward and thereby to aid the sitter in rising.

1,379,944. TOY. ELLIOTT M. STORY, Braintree, Mass. Filed Aug. 2, 1920. Serial No. 400,587. 1 Claim. (Cl. 124—2.)

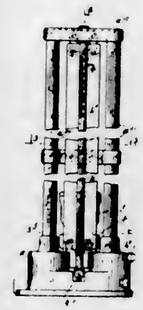
A toy comprising a hand piece including a head having a horizontally extended arrow-guide and a handle fixed to the head and substantially perpendicular to the said guide, and an elastic looped strip fixed at its ends to the head adjacent to one end portion of said guide, and an arrow including a shaft formed to have a lateral movement of considerable amplitude in the guide, and adapted to be projected from the latter by the contraction of said strip, the lower portion of the guide forming a rest adapted to support and guide the arrow horizontally and the lateral

movability of the arrow in the guide permitting various inclinations of the arrow relatively to said rest, the said head being a block having relatively wide vertical side



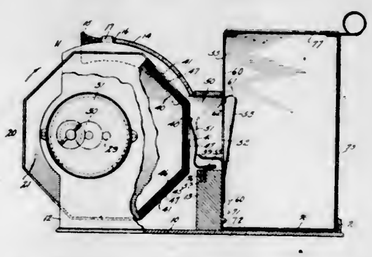
faces, and relatively narrow vertical end faces, and the said guide being the wall of a horizontal circular hole bored in the block from one end face to the other, between the side faces.

1,379,945. BALL-BEARING. WALDEMAR H. TEETSOW New York, N. Y. Filed Dec. 18, 1919. Serial No 345,781. 2 Claims. (Cl. 64—36.)



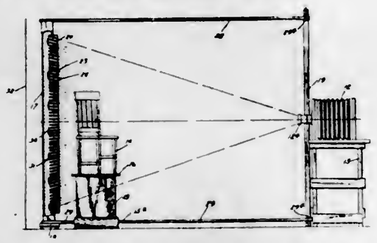
2. A ball bearing comprising a solid raceway having a central bearing rib, adapted to separate and seat a double row of anti-friction balls, a sectional raceway comprising a pair of mating sections having outer annular rims, constituting means for seating and confining said anti-friction balls against the center rib when the sections are brought together, said sections being axially separable to admit of the introduction or removal of the balls, and a temporary locking ring co-acting with said separable sections to retain same against relative separation during the assembly of the bearing in a hub or housing.

1,379,946. COMBINATION FENDER-BRACE AND BUMPER. WALTER H. THOMAS, Spencer, Iowa. Filed Oct. 9, 1920. Serial No. 415,726. 5 Claims. (Cl. 280—153.)



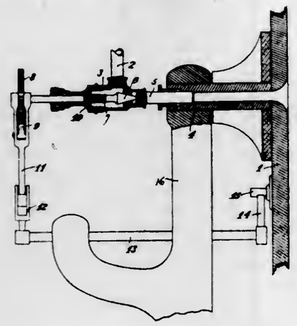
5. In combination with a vehicle body having a pair of fenders and brace members for supporting the fenders on said vehicle body, a combination fender brace and bumper support, having one end fixed to each side of said vehicle body and the other end to said fenders, said combination fender brace and bumper support being formed with a pair of parallel sides of different lengths and having one of their ends connected with a cross portion, said last portion being provided with an opening, a bumper member having an opening at each end adapted to extend between said fenders and have said openings register with said first opening, whereby a detachable fastening device may be used for securing said bumper member to said combination fender brace and bumper support.

1,379,947. TACHOMETER. CURTIS HUSSEY VEEDER, Hartford, Conn., assignor to The Veeder Manufacturing Company, Hartford, Conn., a Corporation of Connecticut. Filed May 28, 1919. Serial No. 300,408. 10 Claims. (Cl. 264—19.)



1. In an instrument of the character described, the combination of an integral base, chambered from its under side, a block chambered from its under side to receive an impeller, and provided with a discharge opening, a reservoir chamber being formed in the base above the block, an impeller, and a chambered cap-plate to close the impeller chamber from below, a channel being formed in the block to effect communication from the chamber above the block to the upper side of the impeller chamber at its center, and channels being also provided to establish communication between the chamber of the cap-plate and the chamber above the block and the under side of the impeller chamber at its center.

1,379,948. FLYTRAP. WILLIAM SIMPSON WALLACE, Fort Worth, Tex., assignor of one-half to Casper O. Dallet, Taylor, Tex. Filed Apr. 27, 1920. Serial No. 377,021. 9 Claims. (Cl. 43—111.)

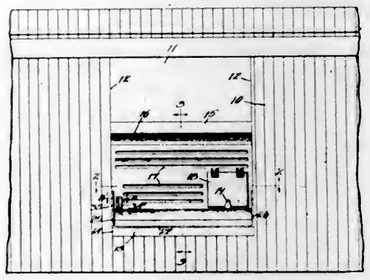


1. In a trap of the class described, a casing having an opening provided in its bottom with a groove, a polygonal drum having bait-carrying means removable on each face thereof adapted to convey insects to the said opening, an upstanding gravity scraper in the form of a plate held in the said opening and having a base provided with a depending member loosely engaging the said bottom groove to allow the scraper to rock, the upper free end of the scraper engaging the said bait-carrying means to remove the insects therefrom, and a cage removably associated with the said casing and having an entrance at the said opening to allow the insects to pass from the opening into the cage.

1,379,949. PROCESS AND APPARATUS FOR PRODUCING PHOTOGRAPHIC NEGATIVES. PAUL H. WEDMARK, Minneapolis, Minn. Filed Mar. 15, 1920. Serial No. 365,775. 9 Claims. (Cl. 95—5.)

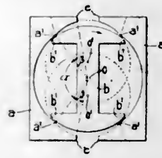
1. The process of making photographic negatives which consists in moving a light-font back of the object being photographed during the period of exposure.

1,379,950. CHURN OR CHURN-KNEADER. ANDERS CARL AUGUST ZEUTHEN, Silkeborg, Denmark. Filed May 17, 1916. Serial No. 98,003. 1 Claim. (Cl. 137—139.)



In a rotating churn, water supply means, regulating means therein adapted to regulate the water supply, and controlling means for operating said regulating means, said controlling means consisting of means adapted to operate said controlling means to a predetermined degree to in turn operate said regulating means to admit a predetermined supply of water to said churn, and a pin on said churn adapted to operate said last named means by the rotation of said churn, said last named means adapted to move beyond the outer end of said pin when said regulating means is moved to its full open position.

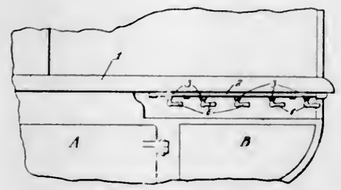
1,379,951. HINGE. ALPHONSE ALARY, St. Casimir, Quebec, Canada. Filed Feb. 24, 1919. Serial No. 278,716. 1 Claim. (Cl. 16—163.)



A hinge of the character described comprising an upper and lower plate each of a substantially rectangular formation, a projection formed upon the outer edge of the lower plate at the upper end thereof, a stub shaft formed integral on the outer edge of said projection, a slot extending transversely therein, a roller journaled in said slot having its outer periphery extending above the edge of said projection, a sleeve formed at the lower end of the upper plate on the outer edge thereof and adapted to receive said stub shaft, said sleeve having its upper end closed and its lower edge adapted to rotate over said roller, said lower edge being inclined upwardly toward the plate whereby the door will normally swing closed by its own weight and recesses formed on said lower edge of the sleeve diametrically opposite thereon for engagement with said roller and adapted to secure the door in an open or closed positio..

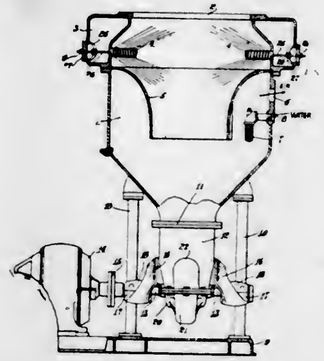
1,379,952. FREIGHT-CAR CONSTRUCTION. SVEN P. ALQUIST, Sedalia, Mo., and ALLAN S. BARROWS, Chicago, Ill., assignors of one-third to W. L. Kellogg, Detroit, Mich. Filed Dec. 14, 1916. Serial No. 136,846. 1 Claim. (Cl. 20—31.)

In a car having a door opening in a side wall thereof, defined by side posts, threshold and lintel, the combination with a door horizontally slidably mounted on the inner side of said wall, of fixed means, disposed outside of the door opening arranged to thereby leave the latter unobstructed, coöperable with the side and bottom edges of the door to form a grain seal therewith when the door is in closed position, said door being formed of sheet metal and having a central, corrugated inwardly dished portion and flat marginal portions, the latter adapted to slidably bear against the inner face of said side wall, said door having an auxiliary relief door disposed within the area of the dished portion and inwardly of the plane defined by said flat marginal portions to thereby avoid interference when the door is moved to one side of the door opening back of the side wall of the car.



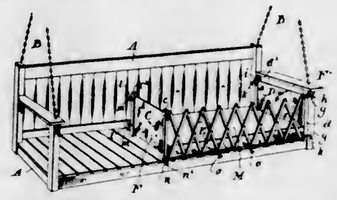
1,379,953. IGNITION-MAGNETO FOR INTERNAL-COMBUSTION ENGINES. HECTOR ANDREINO, Le Locle, Switzerland, assignor to The Society Fabriques des Moutres Zenith successeur de Fabriques des Moutres Zenith Georges Favre-Tacot & Cie., Le Locle, Switzerland. Filed Mar. 31, 1921. Serial No. 457,349. 1 Claim. (Cl. 171—209.)

An ignition magneto for internal combustion engines comprising a field magnet, a rotary armature, pole pieces on said field magnet and extensions on said pole pieces having eccentrically curved faces, each pair of which lie



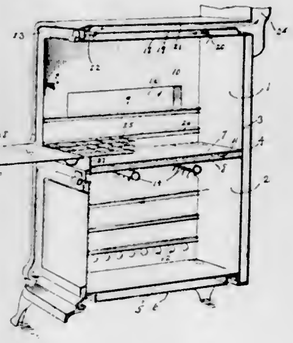
on the peripheral surface of a geometrical cylinder having its axis parallel to the axis of rotation of the armature, the axes of the two cylinders being equally distant from the axis of rotation and the diameters of the two cylinders being equal to on another and less than the diameter of the bore of the pole pieces of the field magnet, so as to form between the said curved extensions and the armature of the magneto, an air gap which increases gradually from each pole edge to the outer edge of its extension, for the purpose specified.

1,379,954. RANGE. EUGENE L. BAKER, Taunton, Mass. Filed Oct. 30, 1920. Serial No. 420,845. 3 Claims. (Cl. 126—39.)



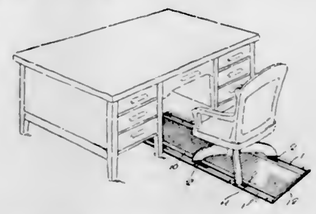
1. In a combination coal and gas range the combination with a gas manifold, gas burners, and gas cocks interposed between the manifold and burners and having their handles underneath, of a continuous supporting flange extending outwardly and downwardly from the range and extending continuously along the front of the coal burning and gas burning portions and partly housing the manifold.

1,379,955. JET-CONDENSER. PAUL A. BANCEL, Nutley, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 18, 1919. Serial No. 324,624. 6 Claims. (Cl. 261—34.)



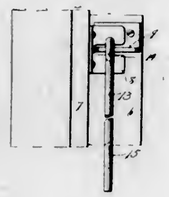
1. In a condenser installation, a condenser, means in vertical alinement therewith for supporting the same, a condensing chamber, a condensate removal pump below said chamber in vertical axial alinement therewith and supported entirely by the walls of the chamber, said pump having a body portion joining the lower end of said chamber, an intake in which the flow is vertically downward and a side discharge, a pump cover plate separably secured to and depending from the body portion of said pump and brackets supporting the impeller bearings, whereby the condenser installation is supported by the means supporting the condenser.

1,379,956. COMBINATION PORCH-SWING AND CRIB. RACHEL BARBOUR, Seymour, Ind. Filed Jan. 21, 1921. Serial No. 438,903. 2 Claims. (Cl. 5—41.)



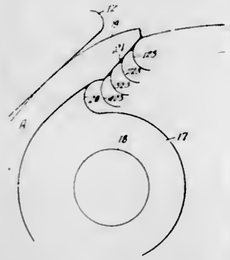
1. A crib member attachment for swings, comprising ends, each consisting of posts and a connecting flexible member, and a side member connecting the end members consisting of lazy-tongs.

1,379,957. GAS-STOVE. WILLIAM J. BEST, Cleveland, Ohio. Filed Aug. 18, 1917, Serial No. 186,845. Renewed Sept. 25, 1920. Serial No. 412,894. 3 Claims. (Cl. 126—39.)



3. A stove comprising a broiling chamber, an oven mounted above the broiling chamber and having a door opening, a single set of burners in the broiling chamber, passages extending from openings in the sides of the broiling chamber to openings in the sides of the oven, and a shelf in the oven level with the bottom of the door opening and so spaced above the bottom of the oven as to leave an air space between them.

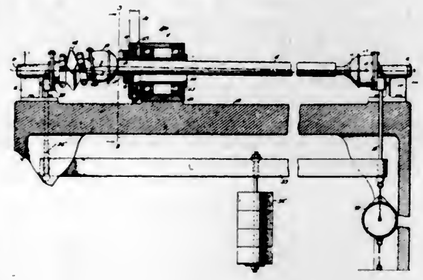
1,379,958. CHAIR-MAT. MAURICE BLUMENTHAL, Brooklyn, N. Y. Filed Aug. 5, 1919. Serial No. 315,462. 4 Claims. (Cl. 155—78.)



1. A chair mat comprising a bed plate, track members overlying the bed plate at opposite longitudinal edges thereof, a filler overlying the bed plate between said track members, and means slidably connecting the track members with the bed plate whereby said track members are adjustable upon the bed plate.

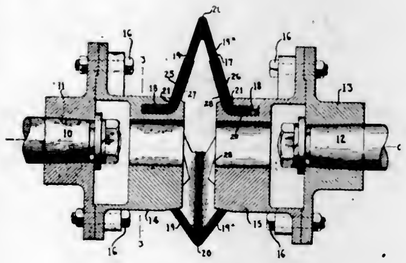
1,379,959. SASH-FASTENER. JOHN F. BRODOWSKI, Milwaukee, Wis. Filed Feb. 9, 1920. Serial No. 357,446. 4 Claims. (Cl. 292—262.)

1. A device of the class described comprising the combination with a pair of relatively main movable parts, of a keeper member secured to one of said parts and provided with a slot, an attachment member secured to the other part and provided with a slide portion movable through the slot of the keeper member, and a holding member having one portion pivotally and slidably mounted on said slide member and provided with a recess adapted to receive a portion of the keeper member to hold the main parts spaced, the end portion of the holding member being engageable against the keeper member when the slide member is inserted through the slot of the keeper member, to hold said main parts together.



1,379,960. EMERGENCY-KNUCKLE FOR CAR-COUPLINGS. JAMES P. CARNEY, Detroit, Mich., assignor of one-half to Catherine E. Long, Chicago, Ill. Filed Feb. 7, 1920. Serial No. 356,841. 3 Claims. (Cl. 213—65.)

1. An emergency knuckle for car couplers which conform to standardized requirements and have a wall providing a forward edge extending vertically on the opposite side of the coupler to that of the guard arm, said knuckle having an inwardly extending main arm conforming to standardized requirements, a perforated pivot lug adapted to be inserted between the upper and lower walls of the coupler head and be pivoted thereto by a knuckle pin, and a vertically extending, substantially outwardly and rearwardly facing surface on its outer portion arranged to bear against the said vertically extending edge of the side wall of the coupler head to thereby hold the knuckle against opening movement and in a predetermined position with respect to standardized parts of the coupler, the contour of said outwardly and rearwardly facing surface conforming to the locus of the vertically extending forward edges of the side walls of a plurality of couplers differing in this respect, whereby the emergency knuckle is interchangeably usable with couplers differing as aforesaid.

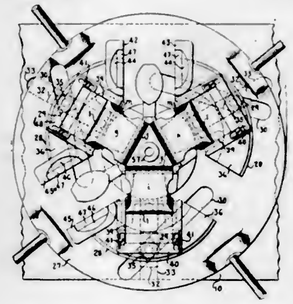


1,379,961. METHOD AND APPARATUS FOR TESTING UNIVERSAL JOINTS. ROLAND CHILTON, Freehold, N. J. Filed Nov. 15, 1919. Serial No. 338,309. 16 Claims. (Cl. 73—51.)

1. In the art of testing the efficiency of an organization consisting of two shafts connected by a universal joint, the method which consists in imposing a torque force on the organization in a direction tending to prevent relative rotary movement of the shafts about their axes and causing

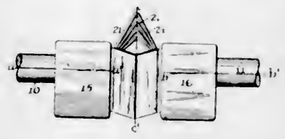
one end of the joint to describe a planetary movement thereby to cause the common plane of the axes of the shafts to rotate.

1,379,962. UNIVERSAL JOINT. ROLAND CHILTON, Keyport, N. J. Filed May 28, 1920. Serial No. 384,851. 25 Claims. (Cl. 64—96.)



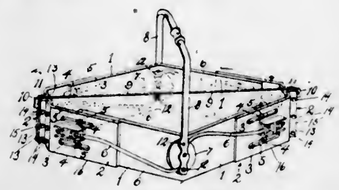
1. An elastic shaft coupling comprising two coupling members, each mounted for rotary movement about an axis extending substantially in the same general direction, and spring plate structures connecting the coupling members, said structures each having end portions extending substantially tangent to the circle of rotation of the attached members and including flat sides coacting to form approximately V-shaped spring extensions connecting the end portions of said structures, each of said flat sides being connected along one base edge with the contiguous coupling member and connected along the opposite edge with each other to form the crown edge at the angle of the V, said flat sides being reduced in width circumferentially of the circle of rotation between said connnected edges thereby to feature circular deflection while maintaining capacity to transmit rotary motion from one coupling member to the other.

1,379,963. METHOD AND APPARATUS FOR FORMING SPRING-COUPLINGS. ROLAND CHILTON, Keyport, N. J. Filed July 20, 1920. Serial No. 397,790. 50 Claims. (Cl. 22—58.)



1. In the art of forming laminated spring structures with a cast-on end part and with parts exteriorly of the cast on end free to move, the method which consists in assembling the laminations in preset relative formation, temporarily holding the laminations together under tension

at a plurality of spaced apart points to prevent relative movement of the same during the succeeding operation and

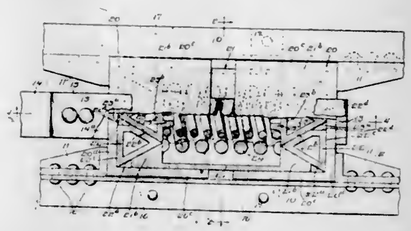


casting metal about one end of the held laminations thereby to secure the laminations at said end in fixed preset relation.

1,379,964. UNIVERSAL JOINT. ROLAND CHILTON, Matawan, N. J. Filed Apr. 11, 1919, Serial No. 289,358. Renewed Oct. 13, 1920. Serial No. 416,781. 7 Claims. (Cl. 64—96.)

1. In a device of the class described, the combination with a driving and a driven member normally disposed with their axes in substantial alinement, of a coupling disposed therebetween to transmit rotary movement from the driving to the driven member, said coupling including a pair of spring members positioned on opposite sides of said axes and each having their opposite ends rigidly secured to said members, each of said spring members including a plurality of laminate spring elements, each extending between its ends in a direction radially of said axis of rotation and each lamina adapted to assume its proportion of the torsional strain to which said spring member is subjected.

1,379,965. CEMENT-BLOCK MOLD. CHARLES W. CLELAND and JAMES G. CLELAND, Baldwin Park, Calif. Filed Sept. 16, 1920. Serial No. 410,576. 8 Claims. (Cl. 25—121.)



7. A mold comprising side and end walls, a sliding connection between the side and end walls, a plate separating the mold into compartments, a resilient bail pivotally connected to the side walls, pairs of rods pivotally connecting said bail with the end walls, said bail and rods adapted when actuated to move the side and end walls toward or away from the center of the mold.

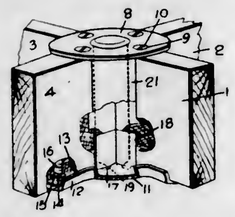
1,379,966. END CLIP. CLARENCE A. COOK, U. S. Army, assignor to Newton D. Baker, Secretary of War, trustee. Filed Mar. 17, 1920. Serial No. 366,620. 5 Claims. (Cl. 24—143.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

4. An end clip for woven material comprising a cup shaped member having a flattened closed end and an inwardly spun edge at its open end, the closed end adapted to buckle inwardly when the clip is flattened upon the material.

1,379,967. FRICTION DRAFT-GEAR. ROY J. COOK, Chicago, Ill., assignor to George C. Murray, Chicago, Ill. Filed Apr. 9, 1920. Serial No. 372,460. 8 Claims. (Cl. 213—64.)

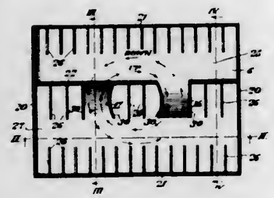
1. The combination with a draft gear yoke of casings mounted in the opposite ends of said yoke and facing toward each other, friction shoes mounted within and extending between said casings, said friction shoes having surfaces coacting with the lateral walls of said casings, and intermediate compressible mechanism mounted between said friction-shoes and coacting with the end walls of said casings.

1,379,968. LOCK FOR CROSS-CHAINS. WILLIAM HENRY COOK, Lee, Mass. Filed Aug. 31, 1920. Serial No. 407,115. 2 Claims. (Cl. 24—241.)



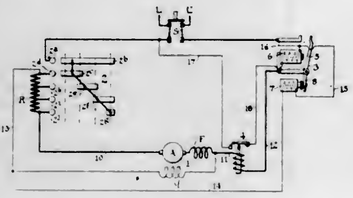
1. In a lock for cross chains, the combination of interengaging pivoted plates, the outer plate being U-shaped in cross section, each of the plates having overlapping transverse slots, the outer plate having a central slot, the inner plate having a perforated projection shaped to pass through said central slot, and fastening means for said plates, said means comprising a cotter pin insertible through the perforated projection named, substantially as and for the purposes described.

1,379,969. CENTER HUB FOR REVOLVING CHAIRS. ROBERT KENNEDY DAWSON, Guelph, Ontario, Canada. Filed Jan. 28, 1921. Serial No. 440,698. 2 Claims. (Cl. 155—138.)



1. A center hub for revolving chairs, comprising an upper plate and a lower opposing plate suitably connected together, chair legs extending at their inner ends between

the opposing plates and having recesses at the lower portion thereof and lug projections extending upwardly from



the lower plate and fitting the recesses and adapted to resist the tendency to outward pull of the chair leg when downward pressure is brought to bear upon the center hub.

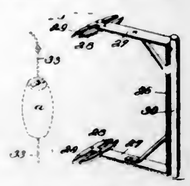
1,379,970. STORAGE-BUILDING. FERNAND E. D'HUMY, Englewood, N. J., assignor to Ramp Buildings Corporation, New York, N. Y., a Corporation of Delaware. Filed June 26, 1920. Serial No. 392,127. 6 Claims. (Cl. 20—1.13.)

5. A building comprising outer walls, two closely adjacent groups of floors overlying two different parts of the ground area within the walls, the floors of one group being located in planes intermediate the planes of the floors of the other group, and two series of ramps connecting the two groups of floors located wholly within the vertical planes of the edges of one group of floors, the ramps of one series being inclined oppositely to the ramps of the other series so that two oppositely inclined ramps extend from points within the outer edges of each floor of one group to points at the adjacent edges of the next higher and lower floors of the other group, each floor having a passage connecting the ends of the ramps communicating therewith.

1,379,971. CIRCUIT-CONTROLLER. CLARENCE T. EVANS and RICHARD B. HUNTER, Milwaukee, Wis., assignors to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Aug. 27, 1915. Serial No. 47,636. 9 Claims. (Cl. 175—294.)

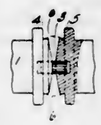
1. A circuit controller including a protective switch, a winding for setting and holding said switch subject to release upon failure of voltage, means controlling said winding to also effect release of said switch upon the occurrence of overloads and a second winding for said switch to oppose resetting thereof when released upon either failure of voltage or an overload.

1,379,972. IGNITION SYSTEM FOR TORPEDOES. BRADLEY A. FISKE, New York, N. Y. Filed Oct. 5, 1920. Serial No. 414,898. 5 Claims. (Cl. 114—20.)



1. In an ignition system for self-propelled torpedoes, the combination of a fuse, a generator operated by the motion of the torpedo through the water, an electro-magnetic mechanism influenced by variations in the magnetic field exterior to the torpedo, and means whereby an increase or decrease of the magnetic field will cause the electro-magnetic mechanism to close the circuit of the generator through the fuse and thereby explode it, substantially as set forth.

1,379,973. STRAIGHT-LINE KNIFE. JOHN B. GILLESPIE, Hoquiam, Wash. Filed Oct. 10, 1919. Serial No. 329,662. 1 Claim. (Cl. 145—1.)

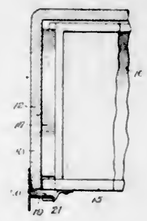


A straight line knife comprising a flat blade tapered at one end, saw teeth on one edge of the tapered end, all beveled in the same direction, each tooth having a flat face in the plane of one face of the blade, and pyramidical saw teeth on the opposite edge of the tapered end in alinement with each other and disposed in a direction opposite to the bevel of the first named teeth.

1,379,974. MAIL-EXCHANGE DEVICE. JOHN EWIN GLASS, Marion, Ky. Filed Feb. 4, 1919. Serial No. 274,947. 3 Claims. (Cl. 258—17.)

1. A mail transfer device comprising a train member provided with a body portion having integral angularly disposed carrier arms, a supporting member attached to said body portion throughout the length of the latter, retaining means pivotally engaging the ends of said supporting member, whereby the train member may swing on a vertical axis, sack-engaging members on said arms extending transversely thereof, and means coöperating with the train member for receiving mail matter from and delivering other mail matter to the same.

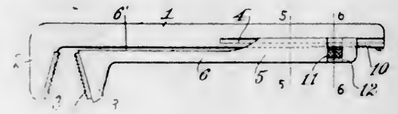
1,379,975. METHOD FOR RECLAIMING BROKEN ROLLS. THOMAS B. GOLDEN, Pottsville, Pa., assignor to David R. Knapp, Pottsville, Pa. Filed Feb. 13, 1920. Serial No. 358,525. 4 Claims. (Cl. 29—148.)



2. The method of reclaiming broken rolls, which consists in mechanically uniting the meeting ends of a broken roll, and then permanently welding said ends and the uniting means to form a complete unitary roll conforming to the original roll.

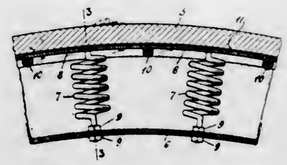
1,379,976. BRUSH. MORITZ GUTMANN, Seattle, Wash. Filed Oct. 23, 1920. Serial No. 419,156. 1 Claim. (Cl. 15—28.)

A polishing device comprising a body having a hand receiving pocket, a yielding spacing member secured in the pocket for keeping the upper and lower walls thereof spaced apart, and a glove-like portion attached to the upper wall of and within the pocket.



1,379,977. DRAWER-LOCKING DEVICE. BEN M. HAMLIN, Chicago, Ill., assignor to J. V. Meyering Trunk Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 25, 1920. Serial No. 419,308. 4 Claims. (Cl. 45—94.)

3. Means for locking a tier of drawers in a cabinet, one drawer of which is lock controlled, comprising two drawer retaining strips hingedly secured to the cabinet and arranged when in operative position to lock the drawers of the tier, other than the lock controlled drawer, and strip engaging members connected with and projecting from the lock controlled drawer, overlapping said drawer retaining strips and acting to hold said drawer retaining strips in operable position when the said lock controlled drawer is closed.



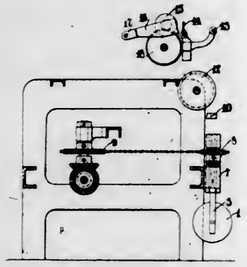
1,379,978. PIPE-WRENCH. FREDRICK M. HAMILTON, Dayton, Ohio. Filed June 26, 1919, Serial No. 306,810. Renewed Apr. 15, 1921. Serial No. 461,681. 1 Claim. (Cl. 81—92.)

A pipe wrench having a handle portion with an extended shank terminated in a fixed jaw, the said handle portion having a longitudinal groove on each side thereof, a movable jaw member having a handle portion having a shank portion, a portion of which extends over the sides of the handle portion of the fixed jaw member and is provided with guide ribs which extend into the grooves in the handle portion of the fixed jaw member, whereby the movable jaw and handle are guided relatively to the fixed jaw and handle, the shank portion of said movable jaw being

reduced in thickness from the handle portion thereof to the jaw to impart resiliency thereto and permit the movable jaw member to flex in the manipulation of the wrench, and means in the handle portion of the movable jaw engaging the handle portion of the fixed jaw and holding said parts in locked position.

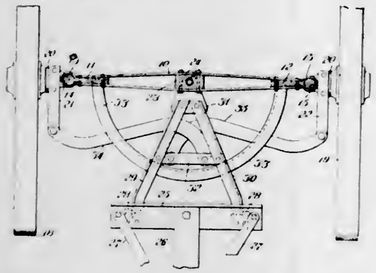
1,379,979. RESILIENT TIRE. LOUIS HANAN and JOSEPH HANAN, Brooklyn, N. Y. Filed Dec. 10, 1920. Serial No. 429,651. 1 Claim. (Cl. 152—8.)

The combination of a rim, a tire casing carried thereby, plates pivotally connected directly with each other in series and located within said casing, said plates being transversely and longitudinally arched in conformity with the cross-sectional and circumferential curves of said casing and fitting snugly against the inner face thereof, a plurality of springs located at spaced intervals within said casing and connected at their outer ends with said plates by being screwed into the same at central points and having their inner ends projecting through said rim at points in radial alinement with the points of connection with said plates, said springs being of substantially uniform circular form and having no contact with any part of said casing and exerting outward tensions in radial directions whereby said casing is resiliently expanded and nuts located upon said inner ends of said springs upon opposite sides of said rim whereby said springs are rigidly fixed in position.



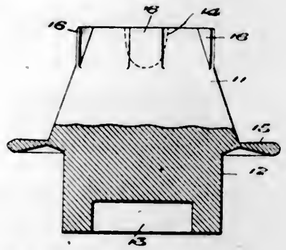
1,379,980. DRILL-STEM COUPLING. WILLIAM J. Harkness, Pittsburgh, Pa. Filed July 6, 1918. Serial No. 243,552. 3 Claims. (Cl. 287—104.)

1. In a device of the character described, an upper section, a lower section, said sections being connected by a tongue and slot joint, a sleeve slidable on one of said sec-



tions and adapted to fit snugly about said joint, said sleeve being split from one end so as to permit ready adjustment thereof, and means for securing the sleeve in position about the joint and for compressing said sleeve so as to force it into close contact with and about the joint.

1,379,981. PRODUCTION OF YARN, TWINE, CORD, AND THE LIKE BY SPINNING OR TWISTING FLAT STRIPS OF MATERIAL. JOHN SWANZY HARLEY, Waltham Abbey, England. Filed June 10, 1919. Serial No. 303,120. 1 Claim. (Cl. 28—21.)

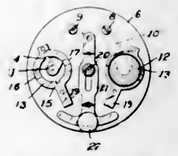


An apparatus for the production of yarn, twine, cord and the like comprising a bearing, a tubular member rotatably mounted in said bearing and provided with legs, a shaft carried by said legs and arranged perpendicularly to the axis of the tubular member, a bobbin carrying strip material mounted on said shaft, the interior of said tubular member having a restricted opening which merges into a bell mouth, through which the strip material is drawn from said bobbin, means for rotating said tubular member, means for drawing the strip material through said tubular member while said tubular member is rotating, and a die provided with an opening having a diameter approximately equal to the thickness of the cord to be formed, located between the tubular member and the last named means and designed to arrest the rotation of the strip and to compress the cord formed from the strip material.

1,379,982. DRAFT MEANS FOR VEHICLES. SHERMAN C. HARTSOCK, Moline, Ill., assignor to D. M. Sechler Implement & Carriage Company, Moline, Ill., a Corporation of Illinois. Filed Aug. 30, 1920. Serial No. 406,877. 1 Claim. (Cl. 280—103.)

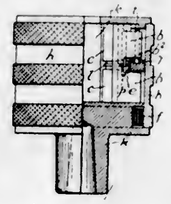
A draft means for a vehicle comprising a transversely-extending axle, short axle members pivotally mounted on vertical axes thereon, carrying wheels journaled on said pivotally-mounted axle members, a plate pivotally mounted on a vertical axis on said transversely-extending axle, two bars rigidly mounted on said plate and diverging forwardly therefrom, a cross-bar pivotally mounted on the forward ends of said diverging bars, a tongue carried by said cross bar, a second cross bar connecting said diverging bars at about their middle points, an arc-shaped bar mounted on said transversely-extending axle for slidingly supporting said diverging bars, arms rigidly mounted on said pivotally mounted axle members and extending forwardly therefrom, and links pivotally connected to said arms at their outer ends and pivotally connected to said second-named cross-bar at their inner ends, said links being crossed at their inner end portions whereby the link at either side is connected to the opposite end portion of said second cross bar.

1,379,983. BLANK FOR FUSE-BODIES AND THE LIKE AND METHOD OF FORMING THE SAME. CARL G. HEIBY, JOHN BURKAM, DAVID E. LINDQUIST, FRED L. RIGGIN, EBENEZER W. ALLEN, and RICHARD LAU, Sarnia, Ontario, Canada, assignors, by mesne assignments, to Mueller Metals Company, Port Huron, Mich., a Corporation of Michigan. Filed Jan. 17, 1918. Serial No. 212,227. 6 Claims. (Cl. 29—148.)



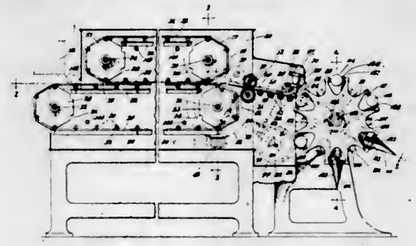
1. As a new article of manufacture, a blank for fuse bodies and the like, having a shank portion at one end, a truncated cone portion at the other end, and a noncontinuous chucking lug projecting laterally from said conical portion, which lug is adapted to be machined off after the finishing operations are completed.

1,379,984. WEAR-RESISTING SURFACE. WILLIAM E. HOKE, Washington, D. C. Filed June 4, 1919. Serial No. 301,760. 2 Claims. (Cl. 64—10.)



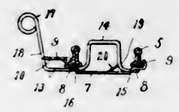
1. A pair of mechanically coöperating parts, such as a shaft and bearing, having smooth engaging parts, the parts in engagement having embedded in their surface portions particles of material harder than the body of the part.

1,379,985. AUTOMOBILE SIGNAL-SWITCH. ANSEL C. HULBERT, San Francisco, Calif., assignor to Edward C. Streich, M. C. Streich, J. E. Manning, E. E. Mullvain, and Van A. Shafer, trustees for The National Auto Signal Company. Filed Sept. 22, 1919. Serial No. 325,430. 1 Claim. (Cl. 200—167.)



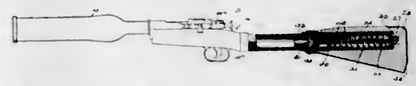
A switch for signals comprising a base having a pair of plates adapted to receive the bases of a pair of lamps, supplementary contacts to complete a circuit, on said lamps, a switch arm adapted to connect either or both of the lamp holding plates with an electric circuit and a cover plate for the switch base having a segmental slot to permit the switch to be moved to one side or the other or to be moved to connect both of the switch points and also having casings with transparent windows to cover both of the lamps.

1,379,986. CHUCK. IVAR HULTMAN, Saltsjöbaden, near Stockholm, Sweden. Filed Oct. 13, 1919. Serial No. 330,419. 2 Claims. (Cl. 279—72.)



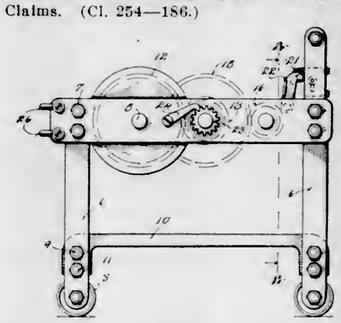
1. In a chuck, the combination of a circular body, a sleeve arranged to turn on the body and having cam faces on its inner side; jaws bearing on said cam faces, and mounted for movement toward and from the center of the body, and to turn therewith, each jaw having the face which is presented toward the center of the body provided with oppositely inclined diverging cam surfaces; work engaging rollers mounted in said faces of the jaws; and a spring arranged to turn the sleeve on the body in the required direction to cause its cam faces to move the jaws and rollers toward the center of the body.

1,379,987. PASTRY-SHAPING DEVICE. ISAAC ISRAEL, New York, N. Y., assignor of one-half to Success Cone Co., Inc., New York, N. Y., a Corporation of New York. Filed Jan. 22, 1919. Serial No. 272,423. 11 Claims. (Cl. 107—58.)



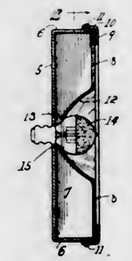
1. In a device of the character specified, in combination, a dough-heating member, means for heating the dough-heating member, means for depositing a strip of dough upon the dough-heating member, means for cutting the dough strip into predetermined lengths, a dough-shaping device, means for transferring the cut dough into the dough-shaping device and means for removing the shaped dough from the dough-shaping device.

1,379,988. TOY-RAILWAY-TRAIN STOP. HARRY C. IVES, Bridgeport, Conn., assignor to The Ives Manufacturing Corporation, Bridgeport, Conn., a Corporation of Connecticut. Filed Nov. 18, 1919, Serial No. 338,841. Renewed Apr. 20, 1921. Serial No. 462,994. 4 Claims. (Cl. 246—203.)



4. A toy railway train stop, comprising a base member adapted to be clamped around the rails of a train section, an operatable member adapted to be pivotally secured to said base member and including an extended portion that may be projected up in the path of travel of a train to stop the same, and means associated with said base member and operatable member whereby said operatable member may be locked in operative position to stop a train, or may be moved to inoperative position to allow a train to pass, said associated means including a spring extending from said base member and engaging said operatable member to cause a handle portion on said operable member to be drawn into a pocket in said base member.

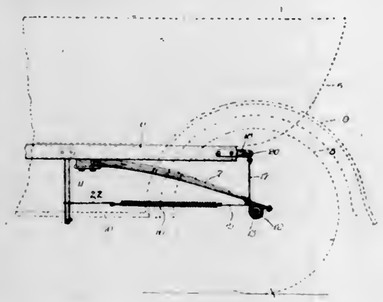
1,379,989. RECOIL MECHANISM. STUART P. JOHNSON, Washington, D. C. Filed Mar. 12, 1920. Serial No. 365,334. 2 Claims. (Cl. 42—74.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



1. An ordnance device, including a discharger, and a stock for said discharger comprising a tubular member, a shoulder stock, a second tubular member secured in the stock for the reception of the first tubular member with a sliding fit, a piston connected to the second tubular member and having a sliding fit in the first tubular member, gas checks between the tubular members, gas checks between the first tubular member and the piston, and means for normally retaining the tubular members in extended position.

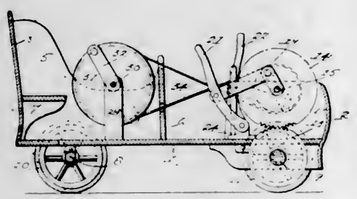
1,379,990. PORTABLE WINDLASS. ALBERT A. KELLER, Milwaukee, Wis. Filed Dec. 6, 1920. Serial No. 428,732. 3 Claims. (Cl. 254—186.)

1. In a windlass of the class described, a collapsible frame structure including a drum supporting frame and removable ground engaging legs, and a winding drum on the drum supporting frame.



1,379,991. SHAVING-MIRROR. THOMAS SEYMOUR KNAP, Brookline, Mass. Filed Mar. 2, 1920. Serial No. 362,817. 1 Claim. (Cl. 240—4.)

In a device of the character described, a frame including a rear wall, side walls and end walls extending at



right angles to the rear wall, a reflecting surface having a central depressed portion, and apertured to receive an illuminating lamp, said reflecting surface adapted to engage the free edges of the end and side walls of the frame, and a frame having a portion thereof contacted with the reflecting surface for securing the reflecting surface to the first mentioned frame, and means for securing the frames together.

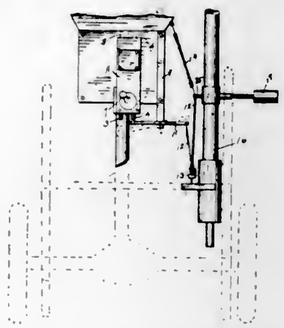
1,379,992. SPRING-CONTROLLER FOR VEHICLES. NORMAN R. KRAUSE, Racine, Wis., assignor of one-fourth to William F. Sawyer, Racine, Wis., and one-fourth to James A. Walsh, Indianapolis, Ind. Filed June 1, 1920. Serial No. 385,470. 5 Claims. (Cl. 267—10.)

3. The combination, in a vehicle, of an axle, a body, a spring therebetween, a snubber communicating with said body and looped about said axle, said snubber embodying guides and a tongue passing therebetween, and means connecting the tongue of said snubber to said vehicle to permit the movement of said snubber about said axle as said body raises and lowers by the action of said spring.

1,379,993. CHILD'S VEHICLE. JAN KUCINSKI, Chicago, Ill. Filed June 16, 1920. Serial No. 389,275. 1 Claim. (Cl. 208—38.)

In a toy, in combination, a wagon-like structure having a pair of wheels mounted on and revoluble with an axle thereon, a gear on said axle, a rotatable shaft mounted on said structure, a second gear fixed to said shaft and meshing with said first gear, a pulley wheel on said shaft, a second pulley wheel mounted on said structure and in driving connection with said first pulley wheel, a pair of crank arms on said shaft, and a pair of pivoted lever arms mounted on said structure, each lever arm being linked to one of said crank arms, whereby upon rotation of said first wheels said lever arms will be reciprocated and both of said pulley wheels will be caused to turn.

1,379,994. METHOD OF MAKING DRILLS OR THE LIKE. JOHN J. KUNZER, Chicago, Ill., assignor to Joseph T. Ryerson & Son, Chicago, Ill., a Corporation of Illinois. Filed May 4, 1918. Serial No. 232,477. 13 Claims. (Cl. 76—108.)

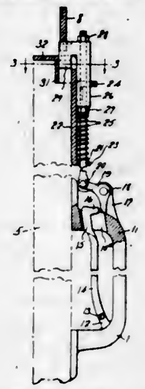


1. The improved method of making drills having longitudinal lubricating ducts, which consists in inserting a longitudinal duct forming strand in the body of the drill, and thereafter covering the strand with a metal filler.

1,379,995. METHOD OF MAKING DRILLS OR THE LIKE. JOHN J. KUNZER, Chicago, Ill., assignor to Joseph T. Ryerson & Son, Chicago, Ill., a Corporation of Illinois. Filed Aug. 7, 1918. Serial No. 248,724. 10 Claims. (Cl. 76—108.)

1. The improved method of making drills having longitudinal lubricating ducts, which consists in laying a duct forming strand in a longitudinal undercut groove of the drill bar, pressing a solid elongated deformable filler element in said groove and forming it against the undercut of said groove and on the strand, effecting relative longitudinal movement of the bar and strand during the forming operation, and finally withdrawing the duct forming strand.

1,379,996. ROAD-VEHICLE SIGNAL. OSCAR LEHMANN, Salt Lake City, Utah. Filed Mar. 29, 1920. Serial No. 369,484. 1 Claim. (Cl. 116—138.)

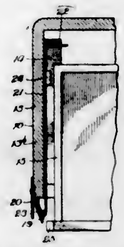


A signal for road vehicles comprising a longitudinally movable shaft of the reverse mechanism of an automobile, means to move said shaft longitudinally, a lever medially pivoted and with one end portion adjacent the end of said shaft; and an audible signal connected with the other end of said lever and adapted to sound when said shaft is moved longitudinally.

1,379,997. SAFETY-CATCH FOR CAR-DOORS. ALEXANDER H. MACMINN and WILFORD H. GRAHAM, Portland, Me. Filed June 26, 1920. Serial No. 391,909. 12 Claims. (Cl. 70—31.)

6. In combination, a closure, a track or rail having stop means, a latch slidably mounted upon the closure to engage with the stop means of the track or rail, independent

manually operated means on each side of the closure for disengaging the latch, one of said means working the latch



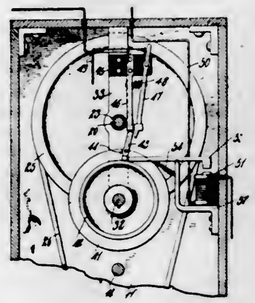
without moving the opposite means, the other of said means being key-actuated, and moving the first latch disengaging means to work the latch.

1,379,998. PREPARING FERRIC ARTICLES FOR METALLIC BATHS. JAMES H. MADDY, New York, N. Y. Filed Nov. 11, 1920. Serial No. 423,443. 1 Claim. (Cl. 204—1.)

The method of securing an effective continuous adhesion of lead coating to iron or steel articles in a molten bath, which consists in electro-plating a film of mercury upon the surface of the article before dipping the article in the molten bath.

1,379,999. DRAWER-LOCKING DEVICE. FERDINAND A. MARCINEK, Chicago, Ill., assignor to J. V. Meyering Trunk Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 25, 1920. Serial No. 419,809. 6 Claims. (Cl. 45—94.)

3. A drawer locking device for locking a tier of drawers, comprising two drawer retaining members, one adjacent each side of the tier of drawers and arranged to overlap parts of said drawers when in operative position, and movable from said operative position to a position out of the path of movement of the drawers, and actuating members connected to said drawer retaining members and having shouldered parts arranged in the path of the closing movement of one of said drawers, whereby said actuating members are moved back and therewith the drawer retaining members are swung in front of said parts of the drawers when said one drawer is moved to its fully closed position.

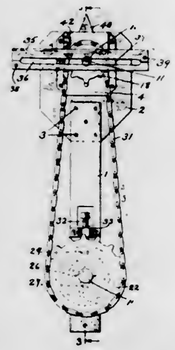


1,380,000. STUD FOR SPRING-PRESSURE FASTENERS OR BUTTONS. VICTOR MARENDOWSKI, Paris, France. Filed Sept. 12, 1917. Serial No. 190,933. 1 Claim. (Cl. 24—213.)

A stud for spring pressure buttons or fasteners having elongated heads composed of two lateral legs connected to the basis and curved in the middle in the form of an M with rounded parts for the purpose of increasing, by the

multiplicity of the points of flexibility, the working of the stud's spring, substantially as described, illustrated and set forth.

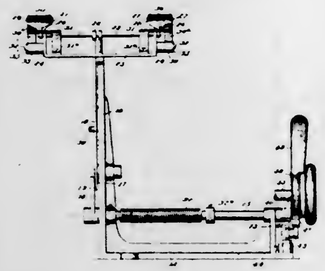
1,380,001. CAR-SIGN EXHIBITOR. HARRY A. MAYBERRY, McLeansboro, Ill. Filed Aug. 17, 1920. Serial No. 404,134. 4 Claims. (Cl. 40—57.)



1. A street car sign exhibitor including a casing, a pair of rollers journaled therein, an endless sign sheet passing around the rollers, an electric motor, means between the motor and rollers to advance the sheet in either direction, fixed and pivoted contacts in circuit with the motor and the electrical system of the car, a disk rotated by the motor and normally at rest, a trip pivoted to the disk and normally holding the pivoted contact away from the fixed contact, a magnetically operated element in the path of the trip and in circuit with the motor and normally retaining the trip in a position to hold the pivoted contact against movement, and means for operating the magnetically operated element at predetermined times to allow the trip to move to permit the pivoted contact to engage the fixed contact to establish an electric circuit to the motor to advance the sign sheet, the pivoted contact being moved away from the fixed contact by the trip upon completion of one revolution of the disk and the magnetically operated element being returned to its normal position to lock the trip against movement.

1,380,002. WINDOW-REGULATOR. JOSEPH S. MESNOOH, Brooklyn, N. Y. Filed June 2, 1920. Serial No. 385,878. 5 Claims. (Cl. 268—4.)

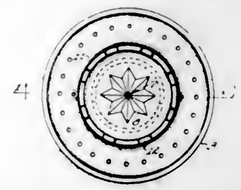
2. A window operating apparatus comprising a chain constituting a driving member, a pin carried by said chain, a plate to be secured to a window, said plate being in sections hinged together so as to form a slot between them to receive said pin whereby the window may be detached from operative connection with the chain without removing the said plate from the window.



4. In a window operating apparatus, the combination of a chain to be operatively connected to a window, a frame, a pair of sprockets disposed on said frame for supporting said chain, a casing on said frame, a gear therein concentric with one of said sprockets, and rotating therewith, a second gear in said casing and in mesh with the first-

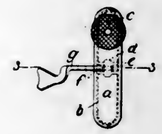
named gear, an operating handle for driving said second gear, a cam rotatable with said second gear, a slide actu-

ated by said cam, and an additional cam coöperating with said slide to lock said chain when the said operating handle is actuated.



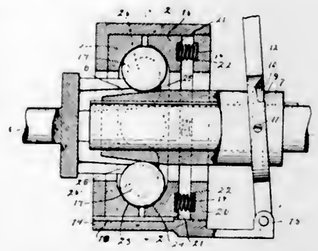
1,380,003. STOP-MOTION DEVICE. WILLIAM S. MILLS Trumbull, and HECTOR E. BISAILLON, Bridgeport, Conn. Filed May 3, 1920. Serial No. 378,406. 12 Claims. (Cl. 112—219.)

1. In a stop-motion device, the combination with a power shaft provided with a wheel to which a brake may be applied, of a tripping mechanism comprising a spring-actuated rock-shaft having a tappet, a bracket supporting said rock-shaft, a lever arranged to be operated by said tappet, a brake device operated by said lever and arranged to act on said wheel, a latch-lever mounted on said bracket and operatively connected with said rock-shaft, a spring-held tripping rock-shaft supported by said bracket and carrying a hooked holding latch normally engaging said latch-lever and holding the stop-motion device inactive, a tripping arm carried by said rock-shaft and provided with one or more narrow slits permitting free passage of a thread or threads, but adapted to be tripped by knots or lumps in the threads to release said latch from said latch-lever and set the stop-motion device into operation to apply said brake device to said wheel on said power shaft.



1,380,004. GAS-BURNER. ALFRED C. MOORK, Chicago, Ill. Filed Aug. 26, 1920. Serial No. 406,058. 4 Claims. (Cl. 158—116.)

4. A gas burner comprising a base having an inlet for gas and air and a serrated flange surrounding said inlet, the cover having a depending serrated flange outside of the serrated flange on the base, the serrations of the two flanges being in staggered relation, and a central depending serrated cone on said cover opposite said inlet, the

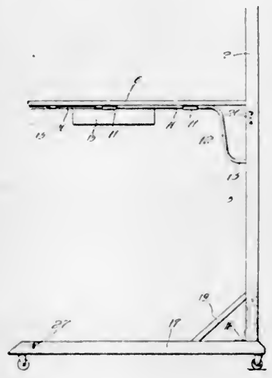


serrations on said cone being in staggered relation with the serrations on the flange of the base.

1,380,005. PLACQUET FOR EYEGLASSES. HARRY NEWBOLD, Herts, England. Filed June 21, 1920. Serial No. 390,642. 3 Claims. (Cl. 88—48.)

1. In an eyeglass mount, a placquet arm having a permanently T-shaped extremity, and a placquet having a spring plate on its rear face, the said plate being slotted and recessed to form a bearing for the T-shaped extremity of the placquet-arm, substantially as herein described.

1,380,006. VARIABLE-SPEED TRANSMISSION. EMANUEL NIELSEN, Racine, Wis., assignor to Hamilton-Beach Mfg. Co., Racine, Wis., a Corporation of Wisconsin. Filed Aug. 4, 1917. Serial No. 184,415. 11 Claims. (Cl. 74—34.)



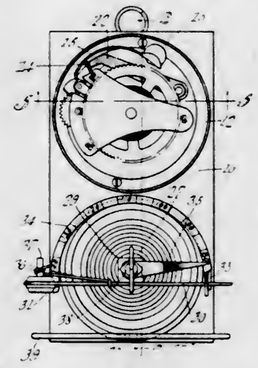
1. A variable speed transmission, comprising a driving member, a driven member, a plurality of spherical members adjacent said driving and driven members, and means including a ball race for causing the spherical members to engage different portions of the driving and driven members of relatively different diameters for changing the ratio of speed of rotation of the driven member with relation to the driving member and for maintaining the spherical members in working position, one of said parts being maintained against rotation.

1,380,007. SERVING-TABLE. FRANK A. OSTERBERG, Chicago, Ill. Filed Apr. 3, 1920. Serial No. 371,020. 2 Claims. (Cl. 45—111.)

1. A serving table comprising a standard in the form of a frame open in the center and having grooves extending

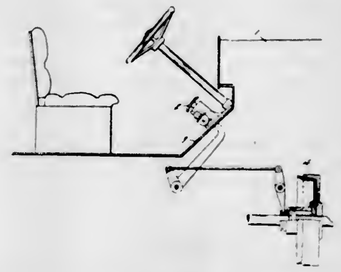
lengthwise of the upright members of the frame on the sides facing each other, a table of a size and shape such that it may lie flat within the opening in the standard, said leaf having at one end lateral projections entered into said grooves and permitting the leaf to swing into and out of said opening and to move bodily along said upright

members, brackets secured on the under side of said leaf and movable from positions in which they lie flat against the latter to positions in which they extend downwardly, and shoulders distributed along said uprights in position to engage said brackets when the latter extend downwardly from the leaf.



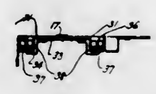
1,380,008. TIRE-CASING-REPAIR TOOL. HENRY J. OTTO, Evansville, Ind. Filed July 1, 1918. Serial No. 242,785. 3 Claims. (Cl. 30—9.)

1. A tool for stepping tire casings in repairing blow-outs, comprising a bit provided upon its end with a flat blade tapering in thickness outwardly from the bit and terminating at its outer edge portion in a knife edge, said flat blade having upon its reduced end an enlarged shoe of greater length than the width of the blade and merging at opposite ends into the knife edges of the blade.



1,380,009. HEAT-ALARM. CHARLES G. OVERMYER, Hartford City, Ind. Filed May 29, 1920. Serial No. 385,288. 4 Claims. (Cl. 116—102.)

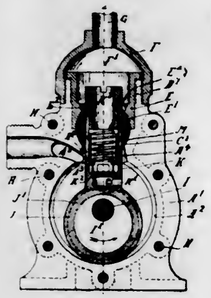
1. In a heat alarm, a base, a sounding device supported by the base, a thermostat supported on the base, a pivotal means supported under the base and having connection with the thermostat and sounding device, a controlling arm having pivotal connection with the base, a keeper carried by the base, said keeper having a slot to accommodate a portion of the controlling arm, a shoulder



formed in one wall of the slot, and a coiled spring for normally forcing the arm under the shoulder.

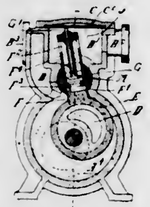
1,380,010. ANTITHEFT DEVICE FOR AUTOMOBILES. BRADY PARMENTER, Birmingham, Ala., assignor to A. L. Atwood, Birmingham, Ala. Filed July 21, 1919. Serial No. 312,302. 1 Claim. (Cl. 70—128.)

A device for locking a foot pedal of an automobile comprising an elongated base portion adapted to be disposed at one side of the pedal to be locked, and provided with raised hinge lugs rounded overhead, a sleeve for the pedal comprising hinge members adapted to embrace the clutch pedal, key controlled lock means to fasten said sleeve sections in position about the pedal, a lateral offset on one of the sleeve members overlying the rounded hinge lugs on said base and having a hinge lug adapted to be interposed between the base lugs, a pivot to connect said lugs together with the curved abutting faces of the lugs and shoulders concentric with the pivot, said device when applied to the pedal being adapted to prevent its depression to change its operating position.



1,380,011. GARBAGE-BOX. FRANK PELC and STEFANIA PELC, McDonald, Pa. Filed Apr. 30, 1919. Serial No. 293,677. 1 Claim. (Cl. 220—41.)

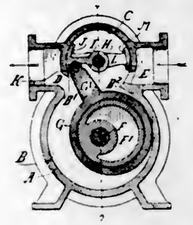
In a garbage box, the combination with a rectangular container, having imperforate side and bottom walls, a



cover removably engaged therewith, said cover having a slanting top and containing openings therethrough, lids slidably engaged at the lower side of said slanting top adapted to cover said openings, means for operating said lids, pairs of guides for said lids secured to the lower side of said cover, transversely thereof and bars attached to the lower side of said lids having upturned and re-entrantly turned portions, and recessed rollers mounted in brackets adapted to receive the ends of said bars, substantially as described and for the purpose set forth.

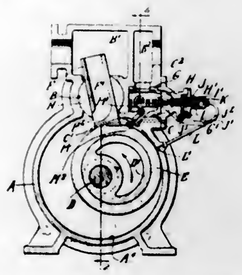
1,380,012. ROTARY PUMP. GUSTAV B. PETSCHE, Yonkers, N. Y. Filed Sept. 22, 1920. Serial No. 411,878. 10 Claims. (Cl. 103—44.)

1. A rotary pump having a cylinder and a globular bearing for a swivel block in combination with a globular swivel block formed with a cylindrical bearing for a slide and an eccentric ring piston having a cylindrical slide extension working in the bearing in the swivel block.



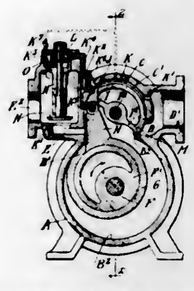
1,380,013. ROTARY PUMP. GUSTAV B. PETSCHE, Yonkers, N. Y. Filed Sept. 25, 1920. Serial No. 412,821. 3 Claims. (Cl. 230—30.)

1. In a rotary pump comprising a cylinder, an eccentric ring piston and a slide extending from the piston through a swivel block, a discharge passage formed through the slide, a non-return valve for closing said passage, moving with the slide and arranged to open automatically to permit the fluid to pass from the pump into the receiver and a valve closing stop supported on a fixed position of the casing and located to contact with and close the valve at the end of each rotative movement of the piston.



1,380,014. ROTARY PUMP. GUSTAV B. PETSCHE, Yonkers, N. Y. Filed Sept. 25, 1920. Serial No. 412,822. 2 Claims. (Cl. 230—30.)

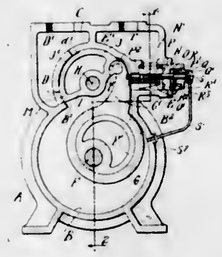
1. In a rotary pump having a cylinder with admission and exhaust ports and a bearing surface in the form of a section of a cylinder formed in a chamber connecting said ports, a rotary eccentric ring piston having a partition blade extending from it, a rock lever pivoted in the center of the bearing, a shoe movable in the cylindrical bearing and attached to the rock lever and an articulated connection between the shoe and the blade extending from the piston and serving as a partition between the ports of the pump, the novel feature which consists in forming



the inlet port in the cylindrical bearing surface and combining therewith an inlet valve actuated by the rock lever and having its movements timed as described so as to close the port through that portion of the cycle when the piston is not in contact with the bore of the cylinder.

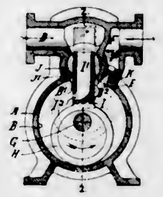
1,380,015. ROTARY PUMP. GUSTAV B. PETSCHE, Yonkers, N. Y. Filed Oct. 6, 1920. Serial No. 415,141. 5 Claims. (Cl. 230—30.)

1. In a rotary pump having a cylinder a rotating eccentric ring piston and a slide extending from said piston through a swivel block and an admission port, a delivery passage in the cylinder casing having a grid valve seat, a grid valve working on said seat to open and close the delivery passage a plunger secured to the valve stem, a cylinder for said plunger connected to the pump cylinder at or near the delivery port and means for closing the valve lying in the path of the pump piston and contacting with it at the end of its delivery cycle.



1,380,016. ROTARY COMPRESSOR. GUSTAV B. PETSCHE, Yonkers, N. Y. Filed Oct. 6, 1920. Serial No. 415,144. 5 Claims. (Cl. 230—30.)

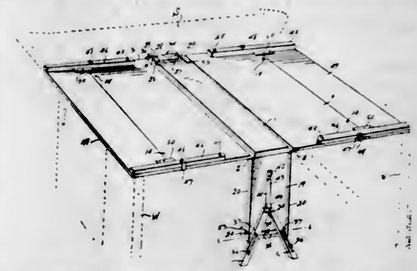
1. In a rotary compressor having a rotary eccentric ring piston provided with an extension forming a division



between the admission and discharge sides of the cylinder, admission and discharge ports in communication with the pump cylinder, a valve for closing the discharge port, a cylinder and piston for actuating said valve to close it, a port leading from the discharge side of the compressor to said cylinder and a valve actuated by the moving parts of the compressor normally closing said port but opening it near the end of the compression cycle of the piston.

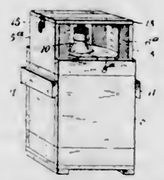
1,380,017. ROTARY PUMP. GUSTAV B. PETSCHE, Yonkers, N. Y. Filed Oct. 6, 1920. Serial No. 415,146. 5 Claims. (Cl. 230—30.)

1. In a rotary compressor having an eccentric ring piston provided with an extension forming a partition between the admission and delivery ports of the compressor cylinder, a valve for closing the delivery port and a valve actuating rod extending into the compressor chamber when the valve is open, at a point lying in the path of the piston extension during the completion of a compression cycle of the piston and so as to be actuated thereby to close the valve.



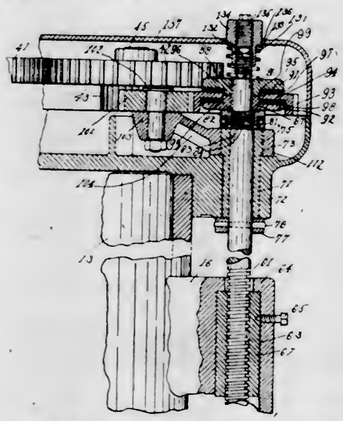
1,380,018. ROTARY COMPRESSOR. GUSTAV B. PETSCHE, Yonkers, N. Y. Filed Oct. 6, 1920. Serial No. 415,147. 4 Claims. (Cl. 230—30.)

1. In combination with a compressor a delivery chamber, a liquid retaining chamber in said delivery chamber and one or more restricted valveless delivery ports opening from the compressor cylinder into said liquid retaining chamber said ports being so proportioned that while they will permit the compressed gas to pass through them into the receiver at high speed they will offer high resistance to a back flow of liquid from the the liquid containing chamber.



1,380,019. LUNCH KIT. WASHINGTON M. POTTER, Freedom, Pa. Filed Sept. 1. 1920. Serial No. 407,437. 11 Claims. (Cl. 190—12.)

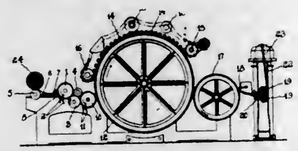
1. A kit of the class described comprising a bottom panel, side panels hingedly connected thereto, end panels coacting therewith when the side panels are folded, a removable top panel, and a supporting member slidably supported by an end portion of the bottom panel and movable longitudinally thereof, said bottom panel being provided with means coacting with the supporting member



for limiting the movement of said supporting member, said supporting member when in one position extending beyond the adjacent end of the bottom panel.

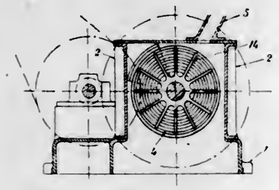
1,380,020. CARBOY-PACKAGE. CLARENCE W. RIEGEL, Easton, Pa., assignor to General Chemical Company, New York, N. Y., a Corporation of New York. Filed Nov. 22. 1920. Serial No. 425,622. 2 Claims. (Cl. 217—52.)

1. A carboy package comprising a container for a carboy and provided in its top with an aperture through which the neck of the carboy is arranged to protrude, reinforcing members extending lengthwise of said container and continued upwardly beyond its top, members secured to said reinforcing members to form upward continuations of the upright walls of said container and a cover extending over the ends of said reinforcing members in spaced, parallel relation to the top of said container.



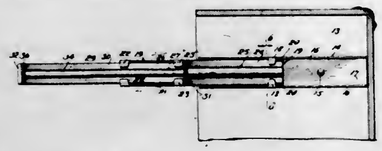
1,380,021. RAISING AND LOWERING MEANS IN METAL-WORKING MACHINERY. ALBERT E. ROBINSON, Cincinnati, and HERMAN W. SCHATZ, Norwood, Ohio. Filed Sept. 10, 1917. Serial No. 190,657. 12 Claims. (Cl. 77—28.)

1. In a metal working machine, the combination of a support, a part adjustable to elevation thereon, and means for adjusting said part to elevation comprising friction



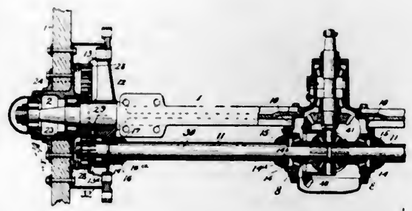
transmitting means arranged to transmit normal loads and to yield to abnormal loads, and means for supporting said part independent of the friction contact of said friction transmitting means during adjustments of said part.

1,380,022. CARDING-MACHINE. ELWIN H. ROONEY, Providence, R. I., assignor to Beirne Gordon, Jr., Utica, N. Y. Filed June 18, 1919. Serial No. 305,098. 2 Claims. (Cl. 19—3.)



1. In a carding machine the combination of a flat card having a main cylinder and a plurality of licker-in mechanisms associated therewith and arranged in series, said licker-in mechanisms comprising cylinders rotatable in a corresponding direction, and mote knives co-acting with the cylinders, a carrier roll interposed between the respective licker-in cylinders and rotatable reversely with relation thereto to transfer the stock from the advance cylinder to the second licker-in cylinder, a fancy roll positioned above the carrier roll and operating upon the stock thereon and a delivery mechanism adapted to feed a lap to the advance licker-in cylinder, said delivery mechanism comprising a feed plate having a nosing portion in close proximity to the periphery of the advance licker-in whereby the stock is received upon the advance licker-in cylinder with a combing section, substantially as described.

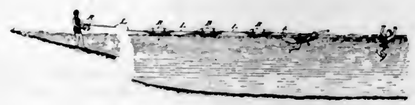
1,380,023. NUT-CRACKING MACHINE. PHILIPPE ROUSSILLON, Argenteuil, France, assignor to Societe Anonyme Des Etablissements, A. Oller, Clermont-Ferrand, France. Filed Mar. 6, 1920. Serial No. 363,772. 4 Claims. (Cl. 146—3.)



1. A machine for breaking the shells of hard-shelled nuts comprising a fixed member and a rotatable member adapted to rotate about a horizontal axis, said members having opposite coöperating faces and being so arranged that the width of the cracking chamber left between said faces decreases progressively toward the said axis, a helical projection on the face of the fixed member, means for feeding nuts to the top of the periphery of said cracking chamber and means for rotating the rotatable member.

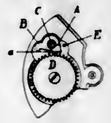
1,380,024. WARDROBE-TRUNK. GEORGE SACHNOFF, Brooklyn, N. Y. Filed Jan. 8, 1921. Serial No. 435,785. 2 Claims. (Cl. 211—16.)

1. In combination with a vertical trunk body having an open front, garment supporting devices therefor comprising guides rigidly secured to the inner facing of opposite sides of said body and having upper and lower flanges and, at an intermediate point in their length, upper and lower guide fingers bent in a direction toward each other, slides fitted within said guides behind and retained by said guide fingers having laterally projecting arms at their rear ends, upper and lower inwardly projecting flanges at the edges of their forward portions in advance of said guide fingers and slide fingers at the ends of said flanges extending toward each other and spaced inwardly from the back of the slides, and a garment hanger supporting slidable frame fitted at its ends within said slides behind and retained by said slide fingers and having a back member in rear of the rear of the rear slide fingers and a front member at the front of the front slide fingers, said frame on a partial forward movement thereof being adapted to engage said slides and then move forwardly with them to without the trunk section and on a partial rearward movement thereof to engage said slides and then move rearwardly with them to concealed position within the trunk section, and said arms on the rear ends of said slides being adapted on the full forward movement of the slides to strike the said guide fingers and arrest the slides.



1,380,025. REAR AXLE. VIGGO V. TORBENSEN, Cleveland, Ohio, assignor to The Torbensen Axle Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 5, 1916. Serial No. 76,241. 19 Claims. (Cl. 74—7.)

4. In a driving axle, the combination of an axle member having at its ends spindles for the mounting of the road wheels, axle plates secured to the axle member near its ends, a differential gear casing rigidly fixed to said axle near its middle, and two casing tubes which at their inner ends are flexibly connected with the differential gear casing and at their outer ends are similarly connected with the axle plates.

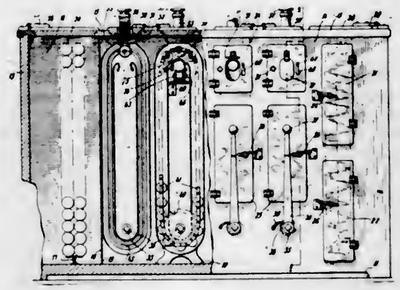


13. In a transmission mechanism for vehicles, the combination of an axle, wheels on said axle, a divided counter shaft provided with a differential and having means engaging said wheels for driving the same, and a casing for said counter shaft wholly supported by said axle, said casing being flexible so as to provide for elastic displacement of said axle.

1,380,026. LIFE-SAVING APPARATUS. HENRY W. WALTERS, Jacksonville, Fla., assignor of one-half to John H. Mackey, Jacksonville, Fla. Filed Jan. 26, 1921. Serial No. 439,999. 7 Claims. (Cl. 9—14.)

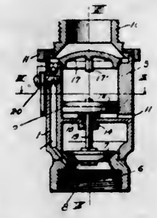
1. In a life saving buoy, a cylindrical body having pointed ends, a rope passing from end to end on the outside of the buoy, and means at either end of the body for facilitating connection of a life line thereto.

1,380,027. CLICK OR DETENT. SYLVESTER ALEXANDER WATKINS, London, England, assignor to Thomas Townsend Russell, Liverpool, England. Filed Oct. 19, 1920. Serial No. 418,083. 8 Claims. (Cl. 58—83.)



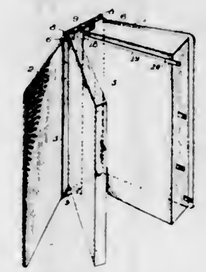
1. A click or detent comprising a rocking beam, a pivot for said rocking beam, a detent arm and a tail arm on said beam, both of greater radial length from said pivot than the distance between said pivot and the wheel to be controlled, and means to maintain the end of at least one of said arms in contact with the wheel.

1,380,028. AUTOMATIC STOP FOR SOUND-REPRODUCING MACHINES. CHARLES P. WETMORE, Milwaukee, Wis. Filed Mar. 24, 1919. Serial No. 284,777. 7 Claims. (Cl. 192—116.)



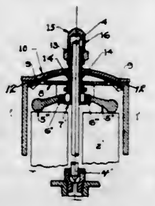
1. In an automatic stop for sound reproducing machines, the combination of a brake wheel adapted to engage with the turn table, a reciprocatory brake controlling member movable into and out of position to engage with a part of the brake wheel and set the brake, a frictional actuating connection with the stylus carrying arm tending to shift said member out of position to set the brake, and means operated by the brake wheel and adapted to shift said member periodically in the opposite direction into position to set the brake.

1,380,029. APPARATUS FOR DISPENSING CONGEALED FOODS AND DESSERTS. FRANK A. WHITE, Cleveland, Ohio. Filed Feb. 28, 1919. Serial No. 279,819. 10 Claims. (Cl. 211—8.)



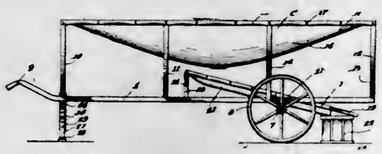
1. A cabinet comprising end storage and central service compartments, movable carriers arranged within the latter compartments, means for causing said carriers to move circuitously therein, a conveyer, means for delivering articles from said carriers to said conveyer, and means for dispensing portions of said articles therefrom, said means comprising a cutting element operable from outside the cabinet.

1,380,030. PRESSURE CUT-OFF. TILMAN WHITE, Berkeley, Calif., assignor of one-third to Raymond Salisbury and one-third to E. F. Peckham, Berkeley, Calif., and one-third to Paul E. Welthanse, San Francisco, Calif. Filed Aug. 21, 1917. Serial No. 187,498. 2 Claims. (Cl. 137—139.)



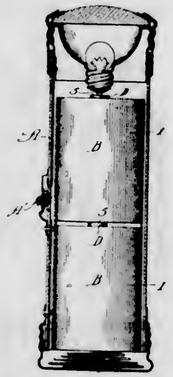
1. A pressure cut off including a casing having a passage therethrough, a main valve in said passage; a cylinder concentrically spaced within said passage behind said valve and joined to said casing by webs; a by-pass in one of said webs open ahead of said valve; a control valve in said passage open to said cylinder and to said by-pass and to said passage respectively at will; a piston in said cylinder connected to said main valve, and a restricted vent to the atmosphere between said piston and said main valve.

1,380,031. ADJUSTABLE BOOKMARK. SCOTT M. ABBOTT, Philadelphia, Pa. Filed Oct. 13, 1919. Serial No. 330,433. 11 Claims. (Cl. 281—42.)



1. A book-marker, comprising the combination of members adapted to be attached to the covers of a book, with a resilient readily flexible member extending between said first members, and a member removably supported by said resilient member and adapted to be positioned between the leaves of a book.

1,380,032. CARBURETER FLOAT MECHANISM. RAYMOND M. ANDERSON, Detroit, Mich., assignor to George M. Holley, Detroit, Mich. Filed Jan. 12, 1920. Serial No. 351,014. 8 Claims. (Cl. 137—104.)

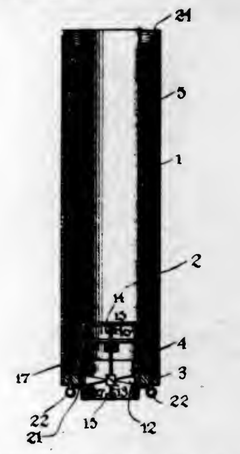


1. In a float mechanism for carbureters a needle, counter weight levers engaging with said needle, a stamping serving as a fulcrum plate, a cover, a piece serving as the needle guide which locks the fulcrum plate to the cover for the purpose described.

1,380,033. FRUIT RECEIVING AND CONVEYING DEVICE. CHANDLER BAGNALL, Battle Creek, Mich. Filed Apr. 5, 1920. Serial No. 371,511. 4 Claims. (Cl. 56—329.)

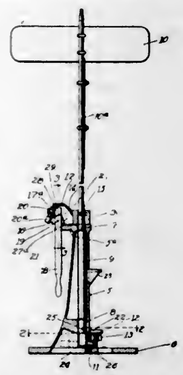
1. A fruit picking and packing device comprising a frame, supporting wheels arranged in one end of the frame, an adjustable supporting leg carried by the opposite end of the frame, a plurality of equi-distantly spaced bows carried by the frame, a superposed supporting frame carried by the bows, a flexible fruit receiving member having inclined sides carried by the superposed frame, the flexible body having a centrally positioned opening therein, an inclined frame carried by the first mentioned frame arranged at an angle thereto, and a flexible body carried by the inclined frame.

1,380,034. DRY CELL. WILLIAM BALDERSTON, Madison, Wis., assignor to French Battery & Carbon Co., Madison, Wis., a Corporation of Wisconsin. Filed Dec. 3, 1919. Serial No. 342,089. 2 Claims. (Cl. 204—34.)



1. A dry cell comprising a container having sealing material closing the upper end thereof, a core of depolarizing mixture in said container, electrolyte between said core and container, and a carbon electrode embedded in said core and extending through said sealing material and having a naked carbon end surface exposed as an abutment contact above said sealing material.

1,380,035. PROCESS OF SEPARATING THE POTASSIUM CONTENT OF POTASSIUM-CONTAINING LIQUORS. HARRY P. BASSETT, Cynthiana, Ky. Filed June 12, 1920. Serial No. 388,662. 14 Claims. (Cl. 23—22.)

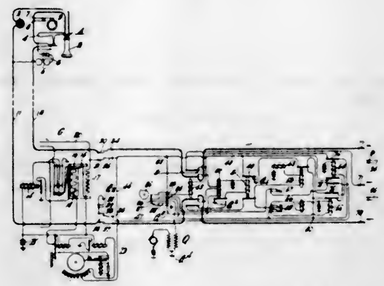


1. A process of separating the potassium content of a liquid containing potassium carbonate which consists in adding thereto sodium sulfate in such amount that the sodium sulfate will be present in the resulting solution in at least molecular proportions with respect to the potassium carbonate, removing by evaporation and crystallization sodium carbonate from the hot solution, thereby promoting the formation of potassium sulfate and cooling and, when the solution is cooled, separating the resulting potassium sulfate by crystallization from the cooled solution.

1,380,036. AIR-DRAFT MOTOR. GOLDEN BERRY, Checotah, Okla. Filed June 3, 1920. Serial No. 386,346. 8 Claims. (Cl. 253—38.)

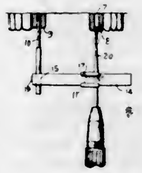
1. An air-operated appliance, comprising a case, an air motor reversible from an operative position for substantial concealment, and a draft tube collapsible into the case, to render the appliance compact and portable.

1,380,037. SWITCH-STAND. CHARLES W. BREED, Western Springs, Ill. Filed June 7, 1920. Serial No. 387,104. 12 Claims. (Cl. 246—393.)



12. In a switch stand comprising a base member, a signal mast mounted thereon, a crank integral with said mast, a crank pin thereon, a switch operating connecting rod thereon, an operating lever connected to said mast, and a comparatively heavy lug cast integral with said base member slightly above the bottom thereof adapted to prevent disassembly of said connecting rod from said crank pin when the crank is in operative position.

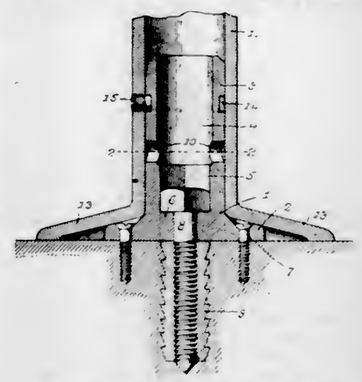
1,380,038. SEALING MECHANISM. WINFRED M. BROOKS, West Orange, N. J. Filed Dec. 11, 1919. Serial No. 344,035. 4 Claims. (Cl. 292—317.)



1. A shackle seal blank comprising: a sheet metal strip having complementary notches formed at opposite ends and in the opposite longitudinal edges of the strip, said blank being bent back upon itself to form a loop and the free ends thereof being crossed and the notches interlocked to prevent longitudinal displacement of the two ends of the strip, and a lug projecting from one of the side edges only of the strip to be folded over the interlocked parts.

1,380,039. AUTOMATIC TELEPHONE SYSTEM. WILLIAM A. CHAPIN, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 28, 1916. Serial No. 128,228. 28 Claims. (Cl. 179—18.)

1. In a telephone system, an automatic selector switch having directively controlled primary movement for selecting groups of lines and automatic secondary movement to select an idle line in a group, means for causing the primary movement of said switch and for initiating the secondary movement, and means for continuing the secondary movement whether all the lines in the group selected in the primary movement are busy or not.

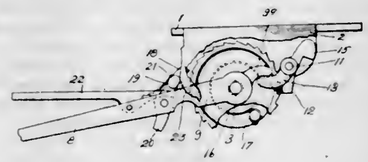


1,380,040. DENTAL ATTACHMENT. HERMAN E. S. CHAYES, New York, N. Y. Filed Oct. 14, 1919. Serial No. 330,650. 3 Claims. (Cl. 32—10.)

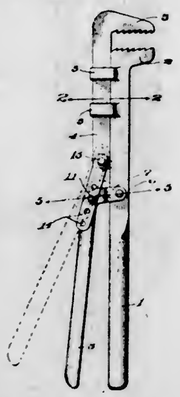
1. In a device for producing parallel bores in dental bridgework, a guide pin for engagement in a bore in one of the bridge abutments, a spacer bar slidably adjustable longitudinally on said guide pin, and a cutting tool guide slidably adjustable longitudinally on the spacer bar to the plane of the second bridge abutment and provided with a guide passage disposed parallel to the guide pin for the reception of a cutting tool.

1,380,041. FLOOR-FASTENING FOR STORE-STOOLS. FRED WESLEY COOK, North Chicago, Ill., assignor to Chicago Hardware Foundry Company, North Chicago, Ill., a Corporation of Illinois. Filed Dec. 23, 1920. Serial No. 432,703. 5 Claims. (Cl. 155—134.)

1. In a stool attaching means, the combination of an attaching head formed with a central bore and having a bottom flange, means arranged in said central bore for attaching said head to a floor, a hollow stool pedestal fitted over said attaching head and having an expanded base portion fitting over and concealing the base of the attaching head, and means for securing the attaching head and pedestal together.

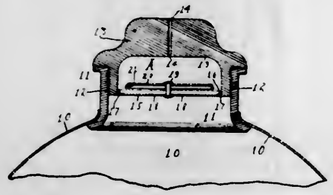


1,380,042. TABLE OR STAND. FRED WESLEY COOK, North Chicago, Ill., assignor to Chicago Hardware Foundry Company, North Chicago, Ill., a Corporation of Illinois. Filed Feb. 4, 1921. Serial No. 442,345. 3 Claims. (Cl. 45—48.)



1. In a table or the like, the combination of a pair of opposed legs formed with orificed lugs, a horizontal brace having enlarged hollow ends formed with orifices for the passage of said lugs, and an attaching bolt passing through an end orifice in said brace end and through the orifices of the aforesaid lugs and having a fixed head at one end and a clamping nut at the other end.

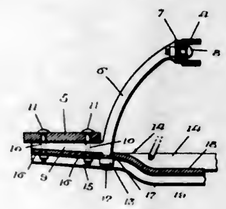
1,380,043. BRAKE MECHANISM. CHARLES C. CREWSON, Kansas City, Mo. Filed Nov. 22, 1919. Serial No. 340,025. 5 Claims. (Cl. 74—116.)



1. A brake mechanism, comprising a staff, a lever and mechanism operable by the lever to turn the staff for brake application purposes, and yieldingly-actuated means to prevent reverse operation of the staff, and reversible to free the staff through extreme movement of the lever in either direction.

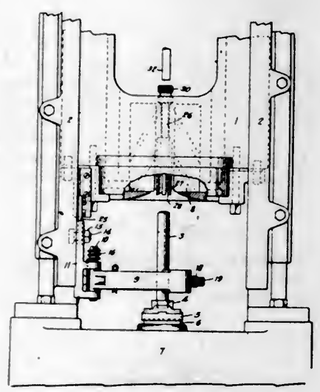
1,380,044. WRENCH. FRANKLIN E. DAVIS, Van Norman, Mont. Filed Jan. 14, 1919. Serial No. 271,073. 2 Claims. (Cl. 81—88.)

1. In a wrench, the combination of a handle, a jaw rigidly carried thereby, a jaw movable toward and from said rigid jaw, a lever carried by said handle, and means for adjustment of the effective throw of said movable jaw toward and from said rigid jaw and for imparting movement of said lever element to said movable jaw element, comprising a pin rigid with one of said elements and a relatively long flat spring link pivoted at one end portion to the other element, said link provided with a plurality of perforations, and adapted to be flexed laterally to dispose the said pin in any one of the said perforations to act as a pivotal connection at the other end portion of the link.



1,380,045. NON-LEAK CAP FOR GASOLENE-TANKS. JOHN DOLEZAL, Guernsey, Iowa. Filed Nov. 20, 1919. Serial No. 339,457. 1 Claim. (Cl. 220—44.)

In a device of the class described adapted to be secured in the bottom of the recess in a cap for a fuel tank the cap being provided with a vent opening, a disk adapted to extend across the bottom of said recess having a plurality of openings therein, a second imperforate disk of lesser diameter than said first spaced above said first disk, the outer edge of said second disk being curved downwardly and spaced from the walls of said cap, a spacer collar interposed between the upper surface of the first disk and the lower surface of the second disk, and a rivet extended through said spacer collar and said disks for holding them in position, the parts being so arranged that ventilation will be permitted into the fuel tank for fuel will not be able to pass out through said vent opening.



1,380,046. RUNNING-BOARD BRACE. ROBERT O. DUTCHER and GEORGE HOPE, Morocco, Ind.; said Hope assignor to said Dutcher. Filed Jan. 29, 1920. Serial No. 354,780. 3 Claims. (Cl. 280—163.)

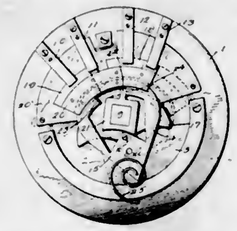
1. A running board bracing structure comprising a pair of braces having arms for supporting running boards, a tie bar having portions to bear upwardly against said arms in overlapping relation, and said braces having means for

engaging said tie bar and clamping same upwardly against said arms.

1,380,047. BOLT-MAKING MACHINE. JAMES A. EDEN, Jr., Springfield, Mass., assignor to Walter H. Foster, New York, N. Y. Filed Dec. 18, 1919. Serial No. 345,708. 16 Claims. (Cl. 10—107).

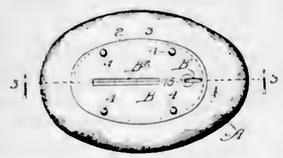
1. A machine for operating on bolt blanks or the like including in combination a chuck having a vertical axis and adapted to engage the blank and means for centering the blank at a point between the chuck and the cutter-head, said means adapted to be moved to one position in which it embraces a blank and to a second position in which it centers the blank in an upright position between the chuck and the cutter-head and permits it to move vertically into engagement with the chuck.

1,380,048. DEEP-WELL PUMP. BERT R. EMRICK and JOHN KATING PORTER, Chauk, Upper Burma, India. Filed Apr. 15, 1919. Serial No. 290,137. 1 Claim. (Cl. 103—80.)



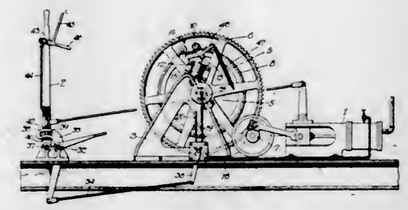
A deep well pump comprising a bore hole lining, a head and stuffing box at the top of said lining, a delivery tube passing through said stuffing box, a reciprocating pump barrel attached to said tubing by a coupling and provided with a head, a delivery valve and cage fixed to said coupling, a tubular pump plunger provided with a collar which coöperates with said head, said plunger being arranged in said barrel and passing through said head and having a case and suction valve fixed to its upper end, its

lower end being secured to the head of a perforated anchor tube, springs arranged between said anchor tube and



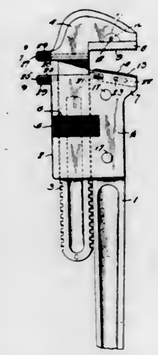
barrel, a gas checking pipe suspended in said anchor tube and extending below the perforations in the same, and guide blocks arranged on the tubing to prevent vibration.

1,380,049. THERMALLY-CONTROLLED ELECTRIC SWITCH. RICHARD L. FEARN, Jr., Washington, D. C., assignor to National Electrical Supply Company, Washington, D. C., a Corporation of Virginia. Filed Feb. 12, 1920. Serial No. 358,251. 6 Claims. (Cl. 200—124.)



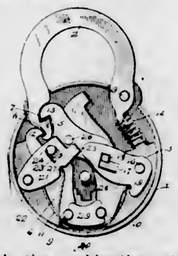
1. A resettable, thermally controlled switch comprising a base, a casing carried by the base, a fusible alloy arranged in said casing, said alloy being solid at normal temperature, a contact member arranged on said base, releasable means for maintaining said contact member in one position, and means for moving said contact member to a second position, said releasable means being adapted to release said contact member when said alloy fuses.

1,380,050. SAVINGS-BANK. CHARLES FISHER, Chicago, Ill., assignor to The Automatic Recording Safe Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 27, 1920. Serial No. 412,984. 8 Claims. (Cl. 232—4.)



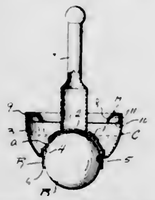
1. In a device of the character set forth, the combination with a wall provided with a coin-slot, of a plurality of substantially flat guard-plates disposed adjacent the inner surface of said wall, and a sheet metal spring-plate equipped with integral spring-arms interlockingly engaging and normally holding said guard-plates in the slot-closing position.

1,380,051. STEAM-SHOVEL. JOSEPH FLETCHER, Bellwood, Ill., assignor of one-half to James A. Sackley Company, Chicago, Ill., a Corporation of Illinois. Filed June 4, 1920. Serial No. 386,542. 5 Claims. (Cl. 74—107.)



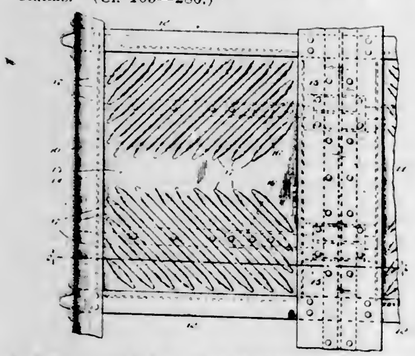
1. In a steam shovel, the combination of a hoist drum, a steam engine, a throttle lever therefor, gearing connecting said engine and drum, comprising a gear which normally is rotatable relatively to said hoist drum, a clutch for connecting said hoist drum and gear, and means for operating said clutch, said clutch operating means comprising a steam ram mounted on one of said parts, steam connections thereto comprising a valve for controlling the admission of steam to said ram and its exhaust therefrom, and means for operating said valve comprising a lever pivoted upon the throttle lever of the engine having an arm which will be in such close proximity to the hand grip of said throttle lever when in position corresponding to position of said valve to admit steam to the clutch operating ram that both said throttle lever and said valve operating lever may be grasped and operated with one hand, substantially as described.

1,380,052. WRENCH. OSCAR R. FOWBLE, Huntington, W. Va. Filed June 21, 1920. Serial No. 390,409. 1 Claim. (Cl. 81—167.)



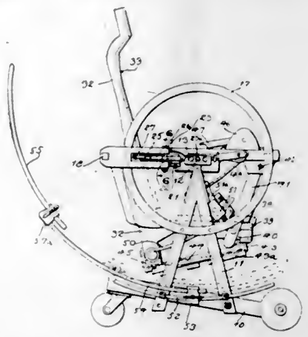
A wrench comprising a handle bar or main shank having an oblique end portion forming a guide surface and provided with a socketed lug projecting beyond the line of said guide surface at the inner end thereof, a sleeve having side plates secured to the handle bar with portions projecting at opposite sides beyond said guide surface and lug and forming therewith a guideway of somewhat greater depth than said lug, a movable jaw having a shank slidable in the sleeve, means for adjusting the same, a supplemental jaw slidably mounted in the guideway and in guided connection with said guide surface and side plates, said jaw having at its inner end a reduced extension movable between the side plates and the outer side of the lug, and a coiled spring secured at one end in the socket of the lug and bearing at its opposite end against the inner end of the supplemental jaw to normally force said jaw outward.

1,380,053. PADLOCK. SAMUEL R. FRAIM, Lancaster, Pa., assignor to The E. T. Fraim Lock Company, Lancaster, Pa., a Corporation of Pennsylvania. Filed Dec. 10, 1920. Serial No. 429,690. 4 Claims. (Cl. 70—105.)



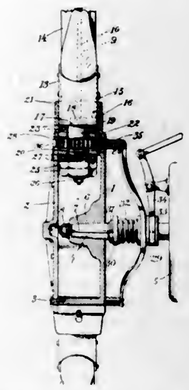
3. In a padlock, the combination with the case thereof, of a shackle, pivoted tumblers arranged to engage opposite faces of the nose of the shackle, a tumbler locking dog pivotally mounted outside of the tumblers, and a detent which engages the locked tumbler and holds the same in shackle-releasing position, said detent when in functioning position being in the path of the nose of the shackle so as to be tripped thereby in the closing movement thereof.

1,380,054. CASTER. JACOB J. FRIEND, Everett, Mass. Filed Oct. 19, 1920. Serial No. 418,076. 3 Claims. (Cl. 43—109.)



1. A caster comprising a bowl having its bottom face concave, a shank extending upwardly from the central portion of the bottom of the bowl, the outer marginal portion of the bowl being defined by a depending wall, a ball extending within the bowl, and a retaining ring telescoping within and engageable with the depending wall of the bowl and coacting with the ball to hold the ball in applied position.

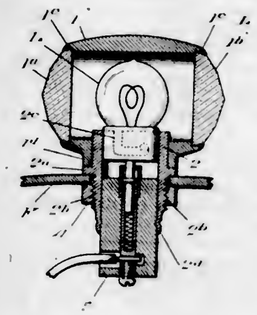
1,380,055. REINFORCED DOOR FOR RAILWAY-CARS OF THE DUMPING TYPE. GARTH G. GILPIN, Riverside, Ill., assignor to Walter P. Murphy, New York, N. Y. Filed Aug. 30, 1919. Serial No. 320,792. 7 Claims. (Cl. 105—280.)



1. A sheet metal door for a railway car of the dumping type formed with a plurality of parallel corrugations which extend diagonally across the door in the general direction of movement of the load when discharging.

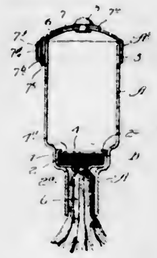
1,380,056. INVALID-CHAIR. GEORGE D. GOODWIN, McRae, Mont. Filed Jan. 31, 1921. Serial No. 441,319. 9 Claims. (Cl. 155—29.)

1. In a chair, spaced supports, side members pivotally mounted thereon, a back member embodying uprights pivotally connected intermediate their ends to said side members, supporting blocks secured to said uprights and having concaved upper faces, a seat support pivotally connected to said blocks, a flexible cover connected to the back member and extending over said blocks and seat support and links pivotally connecting the seat support and said side members.



1,380,057. AEROPLANE-PROPELLER. EMERY T. GOVE, Berkeley, Calif. Filed Dec. 9, 1919. Serial No. 343,563. 4 Claims. (Cl. 170—163.)

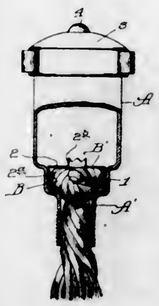
1. In an aeroplane propeller, the combination with a propeller hub and a plurality of blades mounted therein and capable of turning axially in their supports, said blades having gears, rack-bars meshing with said gears, stop arms on said rack bars adapted to engage said gears to limit the movement of said rack bars, and means for actuating said rack bars.



1,380,058. PARKING-LIGHT FOR AUTOMOBILES, &c. ANGUS R. GROSS, Baltimore, Md. Filed Aug. 4, 1920. Serial No. 401,134. 3 Claims. (Cl. 240—7.)

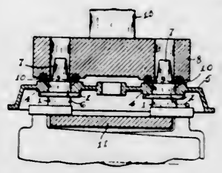
1. In a parking light, a tubular supporting member having a bayonet slot in its upper end for engagement with the pin of a lamp shank, an exterior flange intermediate its ends adapted to rest upon the fender, and an externally threaded portion below the flange adapted to be inserted through a fender; a nut engaging said threaded portion below the fender and clamping the fender between the flange and nut; a small cylindrical casing open at its opposite ends and having a tubular T portion adapted to fit on and over the upper end of the tubular supporting member above the flange; lenses secured in the opposite ends of the casing; a socket screw tapped through the T portion of the casing and engaging the upper end of the socket member to fasten the casing thereto, the outer end of said socket screw being substan-

tially flush with the exterior surface of the T; an insulating block fixedly secured in the lower end of the tubular support; and means in said block for making electrical contact with the contacts in the shank of a lamp when the latter is inserted in the upper end of the socket member; the parts being so proportioned that the lamp is approximately in axial alinement with both lenses, substantially as described.



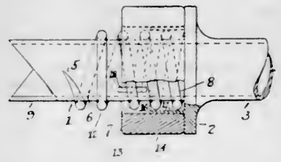
1,380,059. OIL-CUP. ALBERT C. GRUNWALD, Chicago, Ill., assignor to Precision Metal Workers, Chicago, Ill., a Corporation of Illinois. Filed Aug. 8, 1919. Serial No. 316,173. 3 Claims. (Cl. 184—64.)

2. A device of the character set forth, comprising an oil-cup having a contracted base-portion and a still further contracted portion affording a tubular nipple and affording also a seat, and a wick device comprising a hollow member forced into position against said seat and a wick having a portion confined in said hollow member and a portion extending into the nipple, said hollow member having a perforate wall affording a bottom for the oil-cup and through which the oil may seep gradually to the wick.



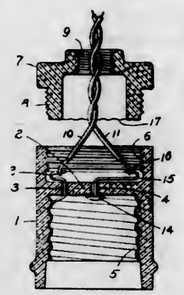
1,380,060. OIL-CUP. ALBERT C. GRUNWALD, Chicago, Ill., assignor to Precision Metal Workers, a Corporation of Illinois. Filed Oct. 8, 1920. Serial No. 415,484. 3 Claims. (Cl. 184—64.)

2. A device of the character set forth comprising a cup provided with a nipple for attachment to a bearing, and a wick device comprising fibrous material and an inverted cup in which the upper portion of said fibrous material is confined, said inverted cup being forced into the base por-



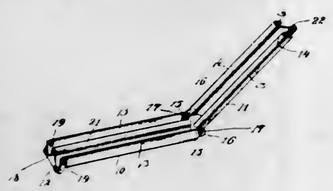
tion of the oil cup above said nipple and having a perforation surrounded by a flange, through which oil may pass.

1,380,061. SEAL FOR STORAGE-BATTERY TERMINALS. CLARENCE W. HAZELETT, Lakewood, Ohio, assignor to National Carbon Company, Inc., a Corporation of New York. Filed Aug. 19, 1918. Serial No. 250,600. Renewed Mar. 25, 1921. Serial No. 455,435. 9 Claims. (Cl. 204—29.)



2. The process of forming a battery terminal and sealing the same to a battery cover, which consists in forming a plate post with an abutment and a shouldered portion, placing the post through a hole in the cover, and forcing a cutting tool against the shouldered portion to bur over the metal against the cover and rivet it in place.

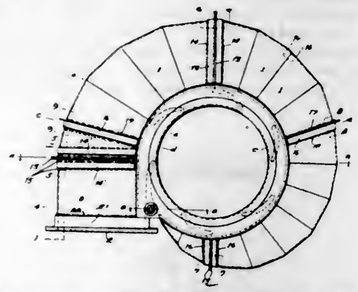
1,380,062. ATTACHMENT FOR DISCHARGING CONTENTS FROM VESSELS. MICHAEL HEFFERNAN, Carrap, Edenhope, Victoria, Australia, assignor of one-third to James Christian Glancy, Apsley, Victoria, Australia. Filed May 14, 1920. Serial No. 381,501. 6 Claims. (Cl. 221—23.)



1. A self-clamping device of the character described, comprising a stem adapted to puncture a wall, a flexible member having its forward end pointed and secured to the stem for passage through the wall thereby to carry said flexible member into position to exert spring tension on one side of said wall, and means carried by the stem for clamping said wall between it and said flexible member.

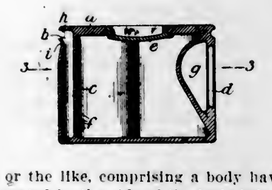
1,380,063. ELECTRIC-LAMP SOCKET. HARRY F. HITNER, Wilkinsburg, Pa. Filed Dec. 1, 1919. Serial No. 341,704. 3 Claims. (Cl. 173—362.)

1. In combination in a device of the class described, an insulating lamp socket, a plug or cap of insulating material threaded upon its exterior and screwing into the rear end of the socket, and binding terminals in the socket adapted to be connected with the ends of leading in wires and positioned opposite the end of the cap so that when the cap is screwed down into the socket the end thereof engages the connections between the wires and terminals.



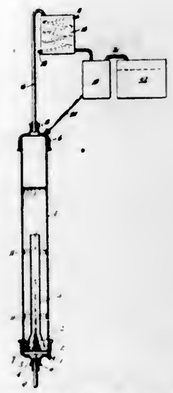
1,380,064. HAIR-WAVER. ISRAEL HOFFMAN, Brooklyn, N. Y. Filed Mar. 5, 1918. Serial No. 220,620. 1 Claim. (Cl. 132—32.)

A hair waving device composed of two longitudinally channeled members, of sheet metal, each having outer walls and straight line channeled bases, forming a plurality of transverse convolutions, the convolutions of one member being smaller than those of the other member that said members may interfit upon an interposed layer of hair to "wave" the latter, adjacent ends of said members being cut away to leave lugs extended from their outer walls, lugs on the smaller member being offset to meet the lugs on the larger member, pivots whereby the lugs of said members are engaged, the pivotally engaged relation of said members being such that their opposed channels are longitudinally spaced apart throughout when said members are closed upon the interposed layer of hair, and engaging means for the free ends of said members.



1,380,065. SPIRAL CASING. ELY C. HUTCHINSON, Oakland, and ELMER W. ANDERSON, San Francisco, Calif., assignors to Pelton Water Wheel Company, San Francisco, Calif., a Corporation of California. Filed Oct. 16, 1918. Serial No. 258,449. 2 Claims. (Cl. 253—120.)

1. A joint construction comprising two parts, an edge of one part arranged opposing and close to an edge of the other part, a member arranged exteriorly of one of said parts with one edge disposed adjacent to the edge of said part, and having its opposite edges welded to said part, one of said welds uniting the edges of said adjacent parts,



said lateral weld terminating flush with the faces of said adjacent parts providing a relatively smooth surface between the same.

1,380,066. TEAPOT, COFFEE-POT, AND LIKE VESSEL. ROBERT CRAWFORD JOHNSON, Leicester, England. Filed Nov. 3, 1917. Serial No. 200,082. 2 Claims. (Cl. 53—3.)

1. A teapot or the like, comprising a body having a top and a groove located in the side of the body below the top, a spout opening provided in the body and merging into the groove, a partition located in the body and forming a spout, and a handle located within the boundary of the body.

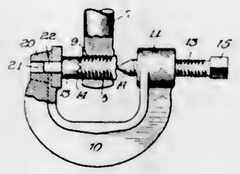
1,380,067. METHOD OF CHLORINATING HYDROCARBONS. GEORGE T. KOCH and ALBERT L. STALLKAMP, Homer, Ohio, assignors to The Ohio Fuel Supply Company, Pittsburgh, Pa., a Corporation of Ohio. Filed Dec. 6, 1919. Serial No. 343,050. 6 Claims. (Cl. 23—24.)

1. The herein described method of chlorinating hydrocarbons, which consists in treating a paraffin hydrocarbon with chlorin in the liquid phase in the presence of finely divided catalyzing material, and injecting the chlorin below said finely divided catalyzing material, so as to cause said catalyzing material to percolate through said liquid.

1,380,068. ART OF CURING MEAT. FREDERICK W. KURK, Chicago, Ill., assignor to Wilson & Company, Chicago, Ill., a Corporation of New York. Filed Jan. 31, 1921. Serial No. 441,503. 5 Claims. (Cl. 99—1.)

1. A bacterial culture containing only the non-putrefactive, non-pathogenic, nitrate-reducing micrococcus and capable of producing in a meat cure containing nitrates a dominant growth of said bacteria for curing the meat.

5. The process of curing meat which comprises immersing the meat in a pickling solution comprising salt and saltpeter and inoculating the fresh solution with a virile culture of the non-putrefactive, non-pathogenic, nitrate-reducing micrococcus, whereby a dominant growth of said micrococcus is produced in the liquid.

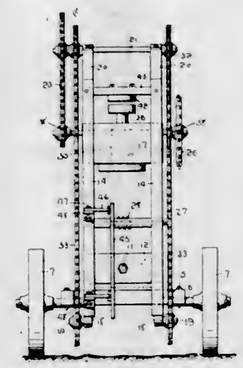


1,380,069. ART OF CURING MEAT. FREDERICK W. KURK, Chicago, Ill., assignor to Wilson & Company, Chicago, Ill., a Corporation of New York. Original application filed Jan. 31, 1921, Serial No. 441,503. Divided and this application filed Feb. 21, 1921. Serial No. 446,762. 2 Claims. (Cl. 99—1.)

1. The process of curing sausage meat which comprises incorporating in the meat curing substances including nitrates and inoculating the meat with a virile culture of the non-putrefactive, non-pathogenic, nitrate-reducing micrococcus, whereby a dominant growth of said micrococcus is produced therein.

1,380,070. ART OF CURING MEAT. FREDERICK W. KURK, Chicago, Ill., assignor to Wilson & Company, Chicago, Ill., a Corporation of New York. Original application filed Jan. 31, 1921, Serial No. 441,503. Divided and this application filed Feb. 21, 1921. Serial No. 446,763. 1 Claim. (Cl. 99—1.)

The process of curing meats which comprises applying superficially thereto curing materials containing nitrates and a virile culture of the non-putrefactive, non-pathogenic, nitrate-reducing micrococcus.



1,380,071. METHOD OF AND APPARATUS FOR REMOVING THREADED MEMBERS. HERMAN G. MARZYCK, Jacksonville, Fla. Filed July 29, 1920. Serial No. 399,950. 4 Claims. (Cl. 81—18.)

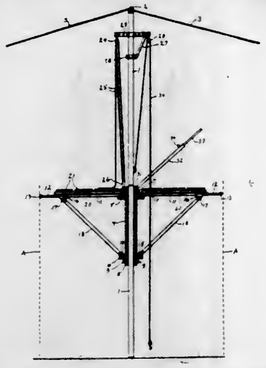
1. In combination with a clamp having alined openings for bits, a threaded bit working in one of said openings, and a bit non-rotatably fitting the other of said openings to coöperate with said threaded bit to clamp a part between the bits, said threaded bit having its inner end pointed and the other bit being provided with a surface to prevent rotation of the part clamped with respect to said bit.

1,380,072. PILE-DRIVER. CLARK W. MILLER, Janesville, Wis. Filed June 30, 1920. Serial No. 393,172. 6 Claims. (Cl. 61—74.)

1. In combination, a pair of guides, chains arranged adjacent said guides, hooks carried by said chains, a hammer reciprocably mounted in said guides, hook engaging arms pivoted transversely and movably mounted in said hammer, a connecting rod between said guides, an

abutment carried thereby, and means for withdrawing said arms to permit the hammer to drop, when engaged by said abutment.

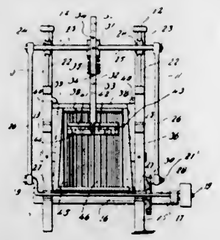
1,380,073. PORTAGE DEVICE. GEORGE MORE, Brooklyn, N. Y. Filed Nov. 17, 1920. Serial No. 424,684. 6 Claims. (Cl. 280—56.)



1. In a portage device, in combination, a frame-like handle member, a wheel-axle bearing member having an aperture for the reception of said handle member, means for localizing said handle member in its engagement with said bearing member, and said localizing means having rearwardly extended means to guide the device in mounting steps.

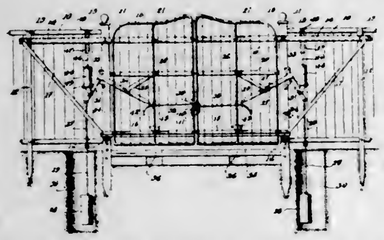
1,380,074. SILO-SCAFFOLD. JOHN MYERS, Sterling, Ill. Filed Sept. 29, 1919. Serial No. 327,146. 1 Claim. (Cl. 304—12.)

A device of the class described, comprising a sectional center-pole; a sleeve slidable thereon and provided with means for attachment thereto; radial supporting arms detachably connected with said sleeve near the upper end thereof; telescopic sections at the outer ends of said arms, provided with wall-engaging means; braces uniting said arms and the lower end of said sleeve, and detachably connected with both thereof; a circular member rotatably



mounted on said center-pole above said sleeve; and a telescopic arm hingedly connected with said circular mem-

ber, and capable of describing a circle about said device, when said arm is in a horizontal position.



1,380,075. [WITHDRAWN.]

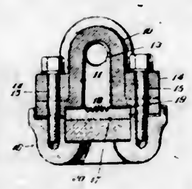
1,380,076. WASHING-MACHINE. JOHN NEWSOME, Sandersville, Ga. Filed Sept. 8, 1920. Serial No. 408,882. 1 Claim. (Cl. 68—19.)

A washing machine including a frame having a pair of uprights each including parallel vertical bars, vertical rods disposed inwardly of the vertical bars, a transverse rod disposed between the bars of the uprights, peripherally grooved disks on the transverse rod riding on the vertical rods, a reciprocatory plunger connected to the transverse rod between the uprights, a driven shaft, a drive shaft operatively engaged with the driven shaft, and pitman rods connected to the ends of the transverse rod and to the driven shaft.

1,380,077. GATE AND DOOR OPERATING MECHANISM. MATTHEW C. OSTER, Roy, Mont. Filed June 7, 1919. Serial No. 302,449. 10 Claims. (Cl. 39—45.)

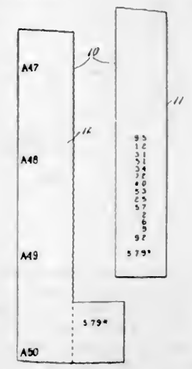
1. In mechanism as specified, the combination of a wall having an opening therein, a gate member slidably mounted on the wall, operating means for moving the gate members into and out of the opening, a cushioning element connected to the mechanism, auxiliary means adapted to co-act with said operating means during a portion of the movement of the latter to move said gate member and means associated with the cushioning element for rendering the same inactive during the major portions of the opening and closing movement, and adapted to render the cushioning element active at the limit of such movement.

1,380,078. TURNTABLE-RACK FOR OVENS. ORA LEE PARTONNAR, Kansas City, Mo. Filed Feb. 6, 1920. Serial No. 356,806. 1 Claim. (Cl. 126—338.)



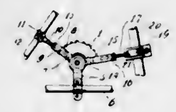
In a turntable rack for ovens, the combination with the oven lugs, of a wire rim forming a square, a table supporting member mounted on said rim and disposed in a plane below the same, said member comprising a central body having thereon a vertical stud terminating in a pivot and associated with the body a plurality of radially extending arms having their outer end portions uniformly upturned and then uniformly turned outwardly at right angles thereto and connected on said rim, the upturned portions of the arms being provided with inwardly projecting revoluble rollers, and a grating rotatably mounted on the pivot on said member and having a rim forming a circle and bearing on the rollers thereon.

1,380,079. WATER-GAGE. GEORGE H. SARGENT, Chicago, Ill., assignor to Sargent Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 22, 1918. Serial No. 229,926. 8 Claims. (Cl. 73—54.)



1. A water gage, comprising a rigid metallic casing consisting of end portions connected by elongated rib portions disposed in a triangulated manner so as to provide three elongated sight openings disposed in different directions, the inner surfaces of the rib-portions being formed to receive hydraulically setting material, glass panels mounted in said casing transversely of said openings, with their edges arranged rearward of the respective rib portions and held in place by the hydraulically setting material without physical contact with the metallic casing, a cylindrical water-glass disposed longitudinally of the casing, and means whereby said water-glass is removably maintained in place.

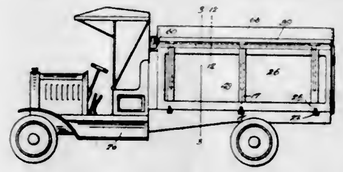
1,380,080. WATER-GAGE. GEORGE H. SARGENT, Chicago, Ill. Filed Apr. 12, 1920. Serial No. 373,359. 3 Claims. (Cl. 73—54.)



3. In a water gage of the class described, a transparent section or sight-wall composed of a plurality of flat glass panels arranged face to face in abutting relation, with the inner face of the inner or water contacting panel provided with a plurality of light refracting facets.

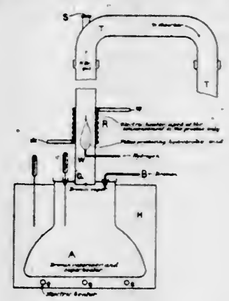
1,380,081. TAPE FOR ADDING-MACHINES. CLARENCE SAUNDERS, Memphis, Tenn., assignor to Piggly Wiggly Corporation, Memphis, Tenn., a Corporation of Delaware. Filed Dec. 10, 1917. Serial No. 206,503. 2 Claims. (Cl. 283—60.)

1. A tape for adding machines perforated longitudinally and having identification characters on one side and adapted to have tabulated records upon the other side and totaled with duplicate totals a distance apart, substantially as set forth.



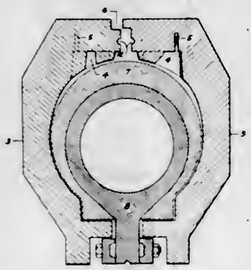
1,380,082. BICYCLE. JOHN C. R. SCHLEDER, McKees Rocks, Pa. Filed Mar. 4, 1920. Serial No. 363,243. 4 Claims. (Cl. 208—154.)

1. In combination with a bicycle of the chain type, a bracket of substantially Y shape; two supplemental sprockets rotatably mounted thereon, means for securing said bracket to the frame of said bicycle and means for establishing driving connections between said sprockets and the driving and driven sprockets of said bicycle.



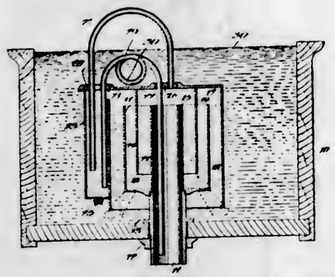
1,380,083. VEHICLE-BODY. LEONARD R. SNAPP, Columbus, Ohio. Filed Mar. 26, 1920. Serial No. 369,132. 6 Claims. (Cl. 296—98.)

1. The combination with the vehicle platform, of angle plates secured to the sides thereof, and a body including side walls having plates at their lower edges disposed at right angles to portions of the said angle plates, said



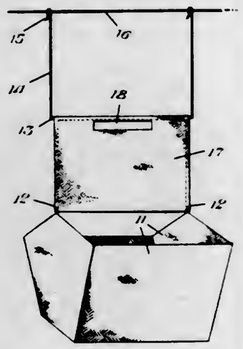
side wall plates and said angle plates having their said portions recessed for the purpose described.

1,380,084. PROCESS AND APPARATUS FOR THE MANUFACTURE OF HYDROBROMIC ACID FROM BROMIN AND HYDROGEN. AEGIDIUS TSCHUDI, Rieben, near Basel, Switzerland. Filed Dec. 22, 1919. Serial No. 346,757. 5 Claims. (Cl. 23—1.)



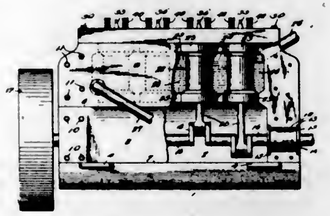
1. A process of making hydrobromic acid from bromin and hydrogen, which comprises causing bromin vapor to occupy the lower portion of an upwardly-extending, tube-like receptacle, and to flow upwardly therein toward a current of hydrogen gas introduced into said receptacle, and burning the bromin vapor by means of the hydrogen at the place at which the hydrogen enters the receptacle, substantially as and for the purpose described.

1,380,085. TIRE-MOLD. CHARLES L. WALTON, Akron, Ohio, assignor to Kelly-Springfield Tire Company, Akron, Ohio, a Corporation of New Jersey. Filed Apr. 16, 1921. Serial No. 461,895. 9 Claims. (Cl. 18—38.)



1. A mold comprising separable sections, each section having a design cut therein in intaglio; a register adapted to serve as an overflow for a portion of the excess of an article molded therein; and air traps in said molds at approximately the outer limits of each element of the design.

1,380,086. AUTOMATIC FLUSH. JAMES BLACK WARES, Omaha, Nebr. Filed May 13, 1919. Serial No. 296,768. 1 Claim. (Cl. 137—106.)



In combination with a tank, an outlet pipe extending through the bottom of the tank, a cylindrical shell surrounding and spaced from the upper end of said pipe, an inverted cylindrical shell having its closed end spaced above the top of said pipe and said first named shell and having its wall extending outwardly of and in spaced relation to the first named shell and terminating below the bottom thereof, a cylindrical member depending from the top of said second named shell and disposed between said pipe and said first named shell, a relatively small upright cylindrical casing at one side of said inverted shell and communicating with the interior thereof at its top, the lower end of said casing being provided with an opening, a vent pipe having one end disposed within said casing, extending above the top of the tank, and having its other end discharging into said second named shell above said pipe, and a siphon pipe having one end disposed within said casing, having its highest point below the maximum level of water within said tank and having its other end extending downwardly into said outlet pipe, and said siphon pipe being provided intermediate its ends at its highest point with a convolution adapted to form an air trap.

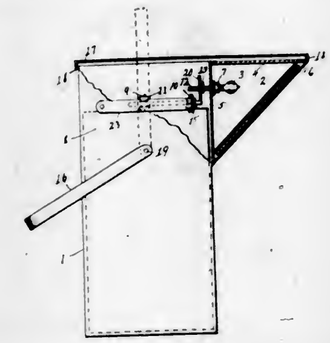
1,380,087. CLOTHESPIN-BASKET. JOHN E. WEST, Jr., Central City, Nebr. Filed May 18, 1920. Serial No. 382,223. 6 Claims. (Cl. 150—51.)

2. A basket comprising a body, and a flexible curtain above the body between opposite sides of the body for stopping articles thrown over said sides so that they will drop thereinto.

1,380,088. AUTOMOBILE-ENGINE. JAMES WHITCOMB and GAROLD C. J. GRAY, Hastings, Nebr.; said Whitcomb assignor of one-eighth to Chancie Elmer Coblentz, Hastings, Nebr. Filed Oct. 23, 1919. Serial No. 332,631. 25 Claims. (Cl. 123—173.)

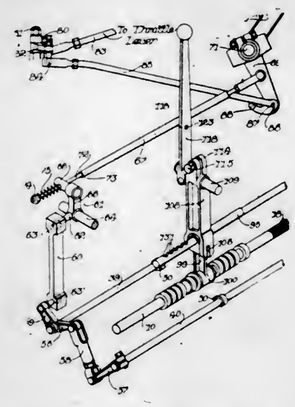
1. In an engine, an elongated cylinder casing comprising longitudinally separable parts, and substantially spool-shaped separate and independent cylinders removably clamped between the separable parts of said cylinder casing.

1,380,089. PHONOGRAPH-NEEDLE. ARNOLD F. WILLAT, San Rafael, Calif. Filed May 21, 1919. Serial No. 298,771. 2 Claims. (Cl. 274—37.)



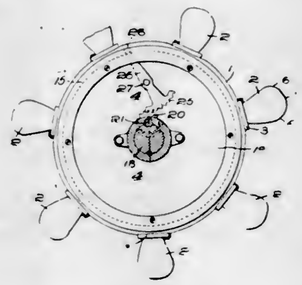
2. A phonograph needle comprising a body member, having one end adapted to be inserted in the needle holder of a phonograph, and having an opening extending therethrough at its lower end, a length of fine wire having one end inserted through said opening and a member of the body for advancing the wire through said opening, said wire being coiled around the last named member.

1,380,090. SECTIONAL TOOL. FRANK C. WILLIAMS, Montello, Nev. Filed May 27, 1919. Serial No. 300,107. 4 Claims. (Cl. 145—61.)



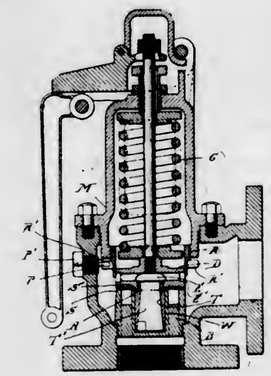
1. A sectional tool of the character described comprising a tubular handle section open at one end and closed at the other end, a supplemental handle section of a size capable of being stored within the tubular handle section, means whereby one end of said supplemental handle section may be detachably coupled to the closed end of the tubular handle section, a tool having means whereby it may be detachably engaged either with said coupling means or with the other end of the supplemental handle section as desired, and a removable closure for the open end of said tubular handle section.

1,380,091. ELECTRIC LANTERN. LEIGH D. BRAINERD, Chicago, Ill. Filed Dec. 31, 1919. Serial No. 348,707. 2 Claims. (Cl. 240—8.5.)



1. In a device of the class described, the combination of a casing having an inclosed light chamber with upper and rear reflectors and glass front opening, an electric light bulb mounted in said light chamber, one terminal in electric contact with the rear reflector, a removable battery within said casing, the central terminal connected with the remaining terminal of the bulb, a spring contact shoe mounted on the casing for contacting with the second terminal of the battery, a cover with downward projecting edges for inclosing the said casing, all substantially as shown and described.

1,380,092. VALVE-GEAR AND CONTROL MECHANISM FOR ENGINES AND THE LIKE. OSCAR F. CARLSON, Chicago, Ill. Filed Oct. 17, 1918. Serial No. 258,660. 39 Claims. (Cl. 121—120.)

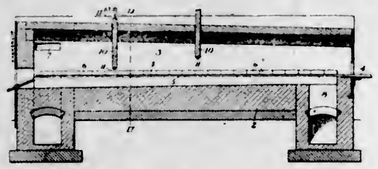


1. In combination, an admission valve, a cam shaft, a plurality of independent separate cams on said cam shaft, said cams being spaced one from the other along said cam shaft, a tappet for engaging the cams on said cam shaft, said tappet being adapted to actuate said admission valve and normally remaining in operative relation to one of said cams, tappet releasing means, means affording a direct mechanical connection between said tappet releasing means and said tappet for moving the latter out of operative relation with said cams, pedal operative means for operating said tappet releasing means, and manually operable means for selectively shifting said cam shaft to bring the desired cam into operative relation with said tappet.

1,380,093. PROPELLER. GEROLAMO CATANZANO, Somerville, Mass. Original application filed Jan. 17, 1919, Serial No. 271,684. Divided and this application filed June 26, 1919. Serial No. 307,006. 4 Claims. (Cl. 170—163.)

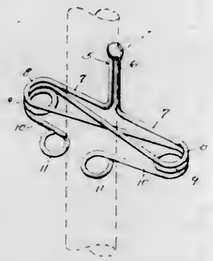
3. The combination with a hull, of a universal propeller comprising a hub, blade bases pivoted thereon, blades on the bases, a base adjusting ring on the hub connected with the blade bases, a ring actuator on the hub, a pinion for operating the same and means for operating the pinion from within the hull.

1,380,094. SAFETY-VALVE. GEORGE H. CLARK, Melrose, Mass., assignor to Crosby Steam Gage & Valve Company, Boston, Mass., a Corporation of Massachusetts. Filed Mar. 30, 1920. Serial No. 369,951. 2 Claims. (Cl. 137—53.)



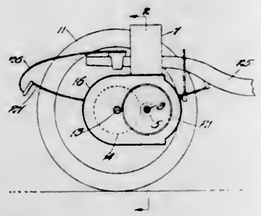
1. In a safety valve, a base provided with concentric seats, and a central well, a valve disk seating on both inner and outer seats, and provided with a tubular portion slidably mounted in said central well, apertures between the interior of said tubular portion and the inner valve-seat, an egress conduit from said tubular portion having its discharge opening from the valve disk outside the outer valve seat, a sleeve, adjustably mounted in the valve casing, making a sliding fit with the outer periphery of the disk and coacting with said egress conduit to constrict the effective aperture thereof as the valve disk rises.

1,380,095. HEATING-FURNACE. NICKOLAS F. EGLER, Chicago, Ill. Filed Aug. 29, 1919. Serial No. 320,602. 6 Claims. (Cl. 263—10.)



1. A heating furnace having a chamber along which the hot gases of combustion travel, elevated tracks along

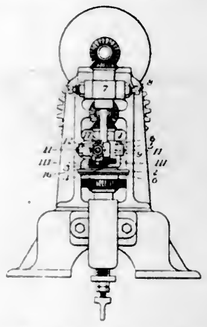
which the workpieces travel through the furnace chamber, and means for deflecting the stream of hot gases from the



furnace roof toward the floor of the furnace and beneath the workpieces, substantially as described.

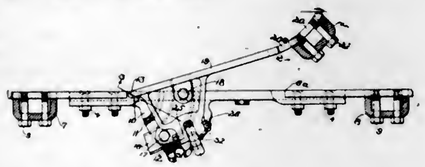
1,380,096. RESILIENT CLAMP. THOMAS S. ESNOUGH and BERNARD L. SCHREINER, Philadelphia, Pa. Filed Mar. 1, 1921. Serial No. 448,907. 3 Claims. (Cl. 24—257.)

1. A resilient clamp including a length of resilient material bent intermediate its ends to provide an attaching member and extended laterally from the attaching member to afford a pair of oppositely disposed arms, the latter being bent and extended reversely and disposed in crossed relation, coils carried by the free ends of said arms, and coacting resilient arms extending from the coils and toward each other.



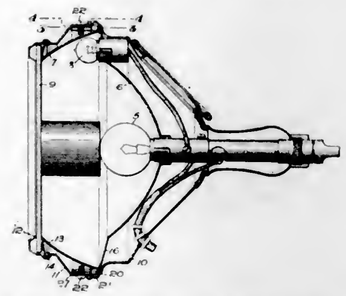
1,380,097. MOTOR-VEHICLE. STEPHEN I. FEKETE and STUART G. BAITS, Detroit, Mich., assignors to Essex Motors, Detroit, Mich., a Corporation of Michigan. Filed July 2, 1920. Serial No. 393,481. 6 Claims. (Cl. 180—62.)

5. The improved motor vehicle having a pair of wheels, an axle, a casing for said axle, an engine mounted on said casing, a crankshaft for the engine in said casing parallel with the axle, reduction gearing operatively connecting said axle and crankshaft, and a friction clutch interposed in the connections between said axle and crankshaft.



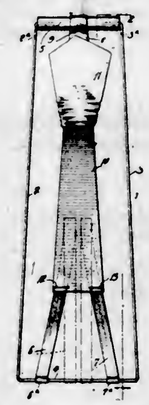
1,380,098. INSOLE-LIP TURNER. FRANK C. FIX, Cincinnati, Ohio, assignor to Armstrong Cork Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 13, 1918. Serial No. 234,042. 7 Claims. (Cl. 12—30.)

1. A machine of the character described, comprising a feed table, a feed means above the table lip turning-devices coöperating therewith for forming a lip on an insole, and means arranged to extend across the formed lip and



engage the top face and outer side thereof for positioning the lip, substantially as described.

1,380,099. TRACK-SWITCH. GEORGE B. GONIA, Somerville, Mass. Filed Sept. 18, 1920. Serial No. 411,047. 19 Claims. (Cl. 104—103.)

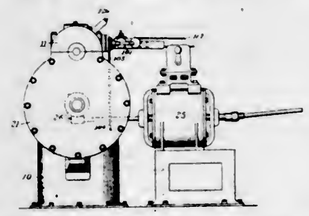


1. In a device of the class described, a pair of fixed track members having spaced extremities, a horizontally swingable track member interposed between said extremities, a support for said swingable member, said support rigidly connecting said fixed member, an actuating device for moving said member, and coöperating locking elements carried by said device and said support respectively.

1,380,100. LAMP. ELLSWORTH A. HAWTHORNE, Bridgeport, Conn. Filed Jan. 16, 1917. Serial No. 142,729. 18 Claims. (Cl. 240—41.)

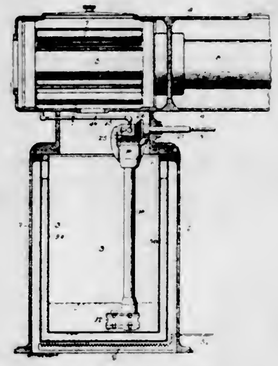
1. In a lamp, the combination of a casing in two parts, one telescoped within the other, one being provided with a plurality of bayonet slots, and one being provided with a seat, a plurality of reflectors disposed within said casing, one of said reflectors being seated against the other, and such other reflector being seated against said seat, a retaining member for retaining said reflectors so seated, and means for holding said retaining member in place and for holding said casing parts together, said mans including fastening elements located in said bayonet slots, respectively.

1,380,101. RENOVATING AND IRONING FRAME FOR NECKTIES. FREDERICK J. HAYMAN, Brooklyn, N. Y. Filed Nov. 20, 1919. Serial No. 339,424. 4 Claims. (Cl. 223—19.)



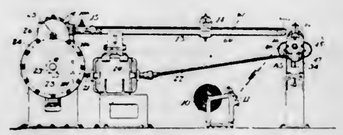
1. In a necktie renovating and ironing frame, the combination with a necktie supporting bar, of a frame associated therewith having a tension bar member spaced therefrom and a plurality of transversely movable tapes mounted upon said tension bar, as and for the purpose specified.

1,380,102. CONTINUOUS AUTOMATIC GRAVITY-DISCHARGE REHEATING-FURNACE. ALBERT WILLIAM HORN, Chicago, Ill. Filed Apr. 21, 1920. Serial No. 375,537. 12 Claims. (Cl. 263—6.)



1. In an apparatus of the kind described, a reheating furnace provided with cooled skid members for the billets, said skids at a suitable point being offset and continued out of alinement with the preceding part thereof, in combination with means for admitting a heating medium above the advancing billets, and independent means for directing a heating medium upon the advancing billets upon the lower surface thereof at the points where said billets were previously in contact with the skid members.

1,380,103. MACHINE FOR FORMING SHELLS OF PAPER OR THE LIKE. EDWIN F. HULBERT, Milwaukee, Wis., assignor to National Paper Can Company, Milwaukee, Wis., a Corporation of Delaware. Filed Dec. 27, 1917, Serial No. 209,184. Renewed Oct. 25, 1920. Serial No. 419,483. 28 Claims. (Cl. 93—81.)

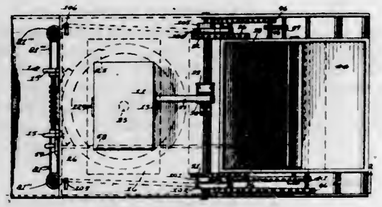


4. A machine for winding shells of paper or the like, comprising a rotary mandrel, and an endless free-running chain-belt engaging and partially surrounding the mandrel and having its links shaped to conform to the curvature of the mandrel, substantially as described.

1,380,104. MACHINE FOR FORMING SHELLS OF PAPER OR THE LIKE. EDWIN F. HULBERT, Milwaukee, Wis., assignor to National Paper Can Company, Milwaukee, Wis., a Corporation of Delaware. Filed Dec. 27, 1917, Serial No. 209,185. Renewed Oct. 25, 1920. Serial No. 419,484. 4 Claims. (Cl. 93—81.)

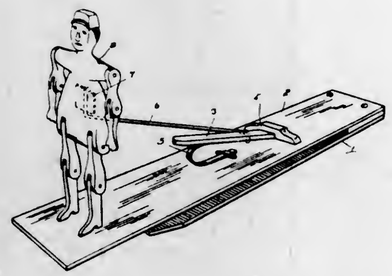
1. A machine for making shells of paper or the like, comprising a mandrel and associated mechanism for winding a sheet of material into a shell, means for supplying a heated wax to the mandrel while the sheet is being wound, means for ejecting the wound shell from the mandrel, and means for interrupting the flow of the wax during the ejecting operation; substantially as described.

1,380,105. WINDING-MACHINE. EDWIN F. HULBERT, Milwaukee, Wis., assignor to National Paper Can Company, Milwaukee, Wis., a Corporation of Delaware. Filed Dec. 27, 1917, Serial No. 209,186. Renewed Oct. 25, 1920. Serial No. 419,485. 5 Claims. (Cl. 93—81.)



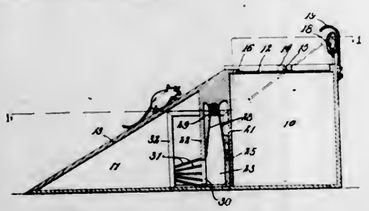
2. A machine of the character described, comprising means adapted to receive strips and wind them into shells, and means for supplying printed strips thereto, comprising a platen cylinder, a printing cylinder coöperating therewith, a gear for continuously driving the platen cylinder having a mutilated portion for intermittently driving the printing cylinder, and means for locking the printing cylinder in its inoperative position; substantially as described.

1,380,106. GROUND-LEVELING MACHINE. MICHAEL JANKIEVICH, Elmhurst, N. Y. Filed Aug. 13, 1920. Serial No. 403,389. 7 Claims. (Cl. 94—44.)



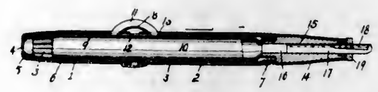
1. A ground leveling machine of the character described, comprising in combination with a motor carrying frame, a steering-roller in said frame, a ground leveling roller in front of said steering-roller, means for supplying sand, and clay to the ground in front of said leveling roller, a stone rake, a collector, and means for carrying

the stones collected by said rake to said collector, brushes for cleaning said rollers during their rotation, rakes and



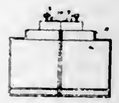
brushes for equally distributing the sand, and clay and means for operating said parts simultaneously and alternately from said motor.

1,380,107. DANCING DOLL. JOHN C. KEEL, Rochester, N. Y., assignor of one-half to Eangelia A. Keel, Rochester, N. Y. Filed Oct. 27, 1920. Serial No. 420,041 1 Claim. (Cl. 46—40.)



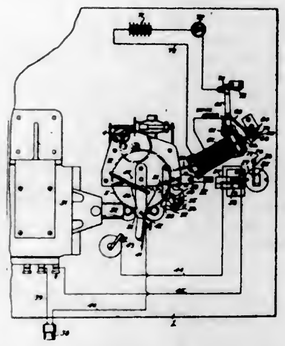
A dancing doll having a base, a spring board mounted thereon, a spring wire mounted on the spring board and supporting the doll in an upright position, a spring arm for vibrating the spring board causing the board and doll to move relative to each other and causing the feet of the doll to strike the spring board at regular or irregular intervals and producing a dancing movement of the doll.

1,380,108. ANIMAL-TRAP. WALTER LABURDA, Coalton, Okla. Filed Apr. 7, 1920. Serial No. 371,858. 2 Claims. (Cl. 43—69.)



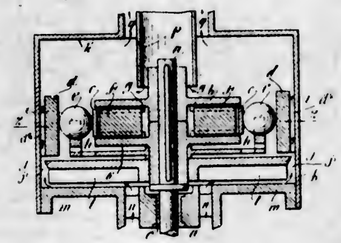
1. A mouse trap having front and rear compartments and a relatively small intermediate compartment, a trap door forming the top of the rear compartment, hinged translucent doors leading from the rear compartment to the intermediate compartment, springs normally urging said doors to closed position, the rear wall of the front compartment having openings therein registering with the said doors, converging spikes extending forwardly from the edges of said openings, and a translucent door in the side wall of the trap registering with the front and intermediate compartments.

1,380,109. FOUNTAIN-PEN. CHARLES A. LUCK, Toledo, Ohio, assignor to The Conklin Pen Manufacturing Company, Toledo, Ohio, a Corporation of Ohio. Original application filed Oct. 26, 1918, Serial No. 259,756. Patent No. 1,315,373, dated Sept. 9, 1919. Divided and this application filed Jan. 22, 1919. Serial No. 272,480. 13 Claims. (Cl. 120—46.)



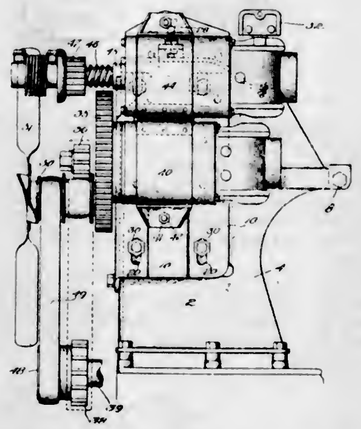
1. A fountain pen barrel having inner and outer telescoped shells, the inner shell being corrugated and reinforcing the outer shell, and the outer shell comprising two sections, one of which is fixed and the other removably threaded to the inner shell.

1,380,110. VESSEL SUPERSTRUCTURE. ALEXANDER MCDOUGALL, Duluth, Minn. Filed Oct. 18, 1919. Serial No. 331,606. 3 Claims. (Cl. 114—74.)



1. The combination with a navigable vessel having the cargo hold thereof divided into a plurality of individual cargo compartments and a plurality of hatch ways communicating with said compartments, of removable hatch covers for said hatch ways, carrying fixed thereto expansion tanks substantially as and for the purpose described.

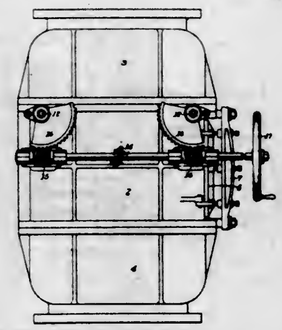
1,380,111. SPRING-MOTOR AND WINDING MEANS THEREFOR. EDWARD S. MARSH, Rochester, N. Y. Original application filed Oct. 18, 1915, Serial No. 56,424. Divided and this application filed May 29, 1916. Serial No. 100,683. 12 Claims. (Cl. 185—40.)



1. In a talking machine the combination with a spring motor, and an electric motor for winding the same having a switch in its circuit, of a switch-actuating means operating automatically to close the switch, means for automatically opening the switch, a brake for stopping the spring motor, and means for preventing the brake from operating while the switch-actuating means is in the position to prevent the movement of the switch to open position.

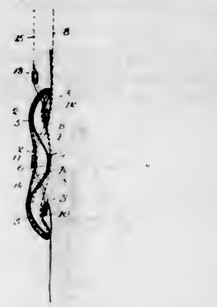
1,380,112. GRINDING-MACHINE. KRISTIAN MIDDELBOE, Frederiksberg, near Copenhagen, Denmark, assignor to F. L. Smidth & Co., New York, N. Y., a Corporation of New Jersey. Filed May 28, 1919, Serial No. 300,454. Renewed Mar. 8, 1921. Serial No. 450,671. 7 Claims. (Cl. 83—45.)

1. In a grinding mill the combination with an outer guide and a series of grinding bodies adapted to roll in contact with the inner face of said outer guide, of an inner guide comprising radially movable sections having its periphery in contact with the grinding bodies, means for rotating the inner guide and for moving the sections outward against the grinding bodies, said sections being each provided on its forward end with a portion adapted to yield inwardly relatively to the rear portion of the section.



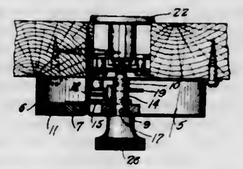
1,380,113. ELECTRIC STARTING AND LIGHTING APPARATUS FOR AUTOMOBILES. WILLIAM B. MOSES, Brookline, Mass., assignor to Gray & Davis, Inc., Cambridge, Mass. Filed Apr. 15, 1916. Serial No. 91,383. 8 Claims. (Cl. 290—47.)

6. In apparatus of the character described, the combination with an engine, of a pair of separately detachable electric units, a bracket adjustably mounted on the engine comprising means adapted to definitely locate said units relatively to each other and to said bracket, and means for securing the units in located positions.



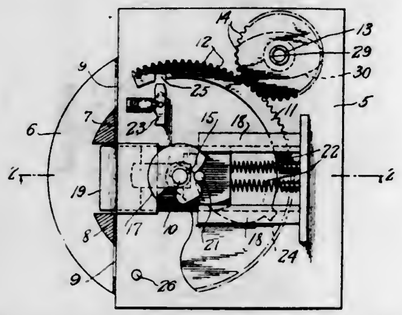
1,380,114. STRAINER. WILLIAM S. ELLIOTT, Pittsburgh, Pa. Filed Oct. 31, 1918. Serial No. 260,457. 6 Claims. (Cl. 210—164.)

1. A strainer apparatus comprising a strainer chamber having a single flow entrance passage, a strainer element removably seated in said chamber, and a perforated guard device normally supported in a position outside the line



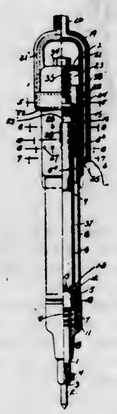
of flow through said flow passage and arranged to be moved across said passage in series with the strainer element, substantially as described.

1,380,115. HOSE-SUPPORTER CLASP. WALTER HYERS, PUMPHREY, New York, N. Y. Filed Jan. 18, 1921. Serial No. 438,257. 16 Claims. (Cl. 24—245.)



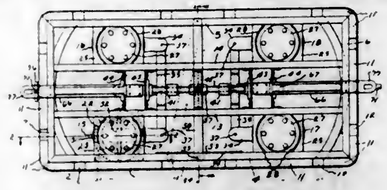
1. A hose supporter clasp comprising supporting webbing terminating in a loop, an undulating distender within the loop shaped to provide unyielding support for certain sections of the loop, leaving the other sections thereof, free and yielding, the yielding sections alternating with the unyielding sections and being oppositely disposed thereto upon opposite sides of the distender, and a coöperating member adapted to engage and bind the hose against the yielding sections of the loop along lines at right angles to the length of the hose.

1,380,116. LOCK. PETER SOLAINI, Astoria, N. Y. Filed June 8, 1920. Serial No. 387,313. 9 Claims. (Cl. 70—46.)



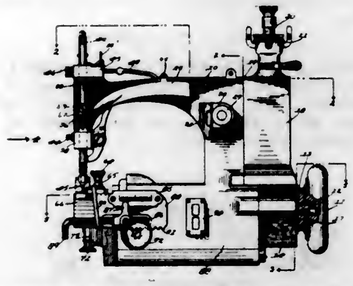
2. In a lock, a casing having a knob spindle extending thereinto, a dead bolt mounted on said spindle and operable thereby, means for locking said dead bolt in either the locked or the unlocked position, and means operable by said spindle for unlocking said first mentioned means to permit the dead bolt to be moved.

1,380,117. LOCK. PETER SOLAINI, Astoria, N. Y. Filed June 8, 1920. Serial No. 387,314. 10 Claims. (Cl. 70—29.)



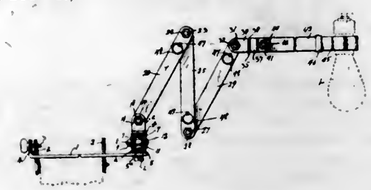
3. In a lock, a casing, a dead bolt carried by said casing, gear teeth on said dead bolt, a pinion rotatably mounted in said casing and meshing with the teeth on said dead bolt, and a cam and spring-pressed follower for moving said dead bolt to and holding the latter in one of its extreme positions, said pinion having means for coöperation with part of a cylinder lock whereby the pinion may be rotated by means of a cylinder lock.

1,380,118. PNEUMATIC CENTERING-PUNCH. WILLIAM THOMPSON SPARROW, Newport News, Va. Filed Feb. 13, 1920. Serial No. 358,503. 3 Claims. (Cl. 121—11.)



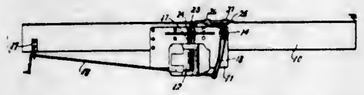
1. A pneumatic centering punch comprising a tubular member with enlarged portions at its top and bottom, and provided with a circumferential series of openings at the top of said bottom enlargement, an anvil reciprocable in said bottom enlargement, a hammer reciprocable in said tubular member, said top enlargement being provided at its bottom with a circumferential recess, and with a series of longitudinally extending grooves in the bottom of said recess, an annulus disposed in said recess and provided with a series of apertures communicating with said grooves, a sleeve bearing at its upper end against the lower end of said annulus and, at its lower end, against said lower enlargement, forming a chamber between said sleeve and said tubular member, said chamber communicating at one end with said grooves and at its other end with said openings at the top of the bottom enlargement, and a tubular valve member reciprocable on said top enlargement, and provided with a longitudinally extending port having branches communicating with said annulus apertures in the raised portion of said valve member.

1,380,119. WHEELED VEHICLE. CHARLES W. SPONSEL, Hartford, Conn., assignor to The Fairbanks Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 10, 1919. Serial No. 322,857. 8 Claims. (Cl. 280—99.)



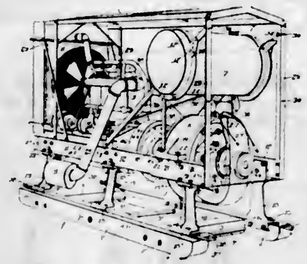
2. A vehicle comprising a body, two sets of rotary wheels in coöperative relation with the body, bearings to which the wheels are connected, the bearings of one set of wheels being mounted for swiveling movements about axes transverse to the axes of rotation of their wheels, a bar connected to the swiveling bearings, and means accessible from the side of the vehicle between the sets of wheels for at will locking said bar to the body of the vehicle.

1,380,120. SELF-LUBRICATING DUSTPROOF SEWING-MACHINE. PHILIP STEINBOCK, New York, N. Y. Filed May 25, 1920. Serial No. 384,027. 7 Claims. (Cl. 112—256.)



1. In a sewing machine of the character described, having a dust proof, chambered casing including an excenter bar, an oil receptacle or chamber, a split-bearing for the excenter bar of the machine having an opening, and a wick adapted to enter the opening in said bar and to extend with its free untwisted or branched ends into said oil chamber, and means for guiding said wick intermediate its ends.

1,380,121. SUPPORT. OSCAR BURKE STITZER, Louisville, Ky., assignor to David Stitzer, Louisville, Ky. Filed Mar. 10, 1920. Serial No. 364,696. 3 Claims. (Cl. 248—1.)



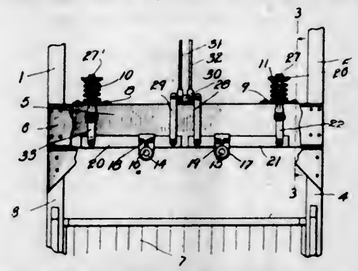
3. A support of the character described comprising an articulated member, anchoring means operatively engaged with one end portion of the member, an engaging member in swivel connection with the opposite end portion of said articulated member, said swivel connection comprising two substantially U-shaped members, one operatively engaged with the articulated member and the second with the engaging member, a headed shank disposed through and pivotally connecting said U-shaped members, and a nut threaded on said shank for maintaining the shank and U-shaped members in assembled relation, said shank and one of the U-shaped members being provided with coacting means to hold the shank against rotation.

1,380,122. CAR-COUPLING RELEASE. GEORGE C. STROUP, Jersey City, N. J., assignor of one-half to John H. Bradshaw, Palisades, N. J. Filed Sept. 16, 1919. Serial No. 324,196. 5 Claims. (Cl. 213—59.)

1. In a coupling release, in combination, a bell crank pivoted adjacent the coupling, said bell crank comprising two arms, one arm being extensible, the extensible arm as a whole pivotally mounted on the other arm, means for connecting the extensible arm to the coupling pin, and means for moving the bell crank about its pivot.

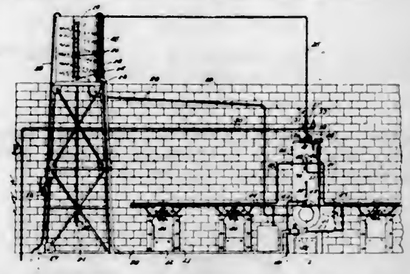
1,380,123. PORTABLE LIGHTING-PLANT. WILLIAM E. SULLIVAN, Roodhouse, Ill. Filed Aug. 2, 1918. Serial No. 248,024. 4 Claims. (Cl. 290—1.)

1. A portable lighting plant comprising a rectangular frame including a pair of bars spaced apart, in combination with an upright internal combustion engine and a dynamo-electric machine of less height than said engine and direct connected in axial alinement between said bars and supported thereon, a fuel tank mounted in front of said engine above said generator and supported on said frame, and an electric control panel disposed in upright position across the generator end of said frame, in front of said tank.



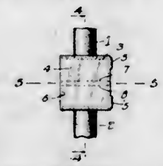
1,380,124. CONNECTING-LINK. ALLEN A. TIRRILL, Pittsburgh, Pa. Filed Apr. 20, 1920. Serial No. 375,329. 2 Claims. (Cl. 24—241.)

1. A connecting link comprising a body or link member having an opening therein, a notched tumbler plate on said body member, a headed post rotatably securing said tumbler plate on said body member, and protuberances on said tumbler plate for protecting the head of said post.



1,380,125. TENSION-EQUALIZING AND SHOCK-ABSORBING DEVICE. FREDERICK E. TURNER, Kansas City, Mo., assignor to Kansas City Elevator Manufacturing Company, Kansas City, Mo., a Corporation of Missouri. Filed Oct. 11, 1920. Serial No. 416,217. 8 Claims. (Cl. 187—22.)

1. In combination, an elevator, a yieldingly supported device connected to the elevator, said device comprising a pivoted lever, a yielding connection between the elevator

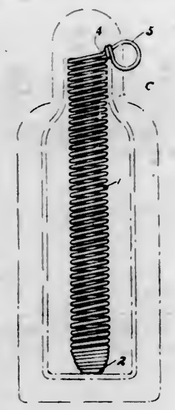


and one end of the lever, and a cable connection at the other end of the lever.

1,380,126. CRUDE-OIL-BURNING SYSTEM. HARILAOS N. TZIMINADIS, New York, N. Y. Filed Dec. 27, 1920. Serial No. 433,189. 4 Claims. (Cl. 158—36.)

1. In a system of the class described, a furnace having a side wall, a cylindrical boiler projecting through said side wall, and an oil distributing tank mounted on the boiler with the shell of the boiler forming the obttom of the tank.

1,380,127. COUPLING. WALTER J. WELCH and ATLEE H. TRACY, Chicago, Ill., assignors to H. M. Byllesby & Company, Chicago, Ill., a Corporation of Delaware. Filed Sept. 1, 1920. Serial No. 407,294. 4 Claims. (Cl. 287—113.)

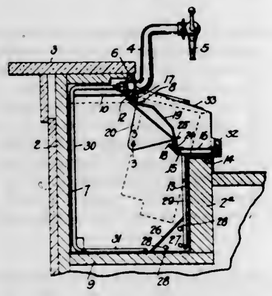


1. A coupling for the purpose specified, comprising hollow coupling members a side of each of which is open, one of which telescopes into the other, the interior of said coupling members forming a chamber adapted to receive heads on the ends of the rod sections to be connected, the end walls of said coupling members being provided with slots which "cut out" at the open sides thereof and are adapted to receive the rods to be connected beneath the heads thereon, the relation being such that the heads on said rods will interlock with the end walls of the inner coupling member adjacent to the slot therein, substantially as described.

1,380,128. THERMOS-BOTTLE ATTACHMENT. CONNIE H. WILSON and CHARLES G. LEE, Asheville, N. C. Filed Sept. 10, 1920. Serial No. 409,433. 2 Claims. (Cl. 215—13.)

1. A device of the character described including an elongated coil of heat conducting material, said coil hav-

ing a closed end portion for engagement with the bottom of a container and an upper end portion for engagement

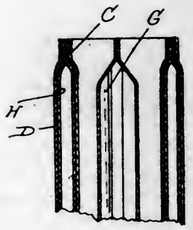


with the neck of the container, and means extending from one end of the coil to be grasped by the user.

1,380,129. ATTACHMENT FOR INK-BOTTLES. HENRY WOLFF, New York, N. Y. Filed Oct. 25, 1920. Serial No. 419,243. 4 Claims. (Cl. 120—73.)

1. An ink bottle attachment comprising a length of wire adapted to be secured to an ink bottle and having a portion bent up to form a pen rack, the bends forming a plurality of bearings; and a second length of wire mounted in said bearings and provided with legs adapted to grasp the sides of said bottle when in one position and to effect tilting of said bottle when in another position.

1,380,130. SODA-FOUNTAIN. JOHN J. WOMPEY, Denver, Colo., assignor to The L. Grauman Fixture Company, a Corporation of Colorado. Filed Oct. 2, 1919. Serial No. 327,959. 8 Claims. (Cl. 225—1.)

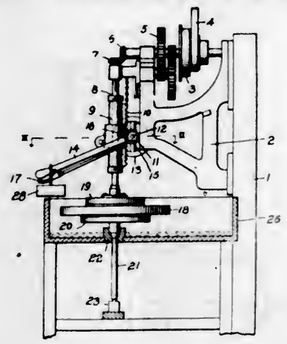


1. In a soda-fountain, an ice-receptacle having an entrance in one of its sides, a lid closing the entrance, and a drip-pan extending outwardly from the entrance at the lower edge thereof.

1,380,131. CEILING-LIGHT. LAURITZ W. ANDERSEN, Waterbury, Conn. Filed Aug. 10, 1916. Serial No. 114,109. 4 Claims. (Cl. 240—78.)

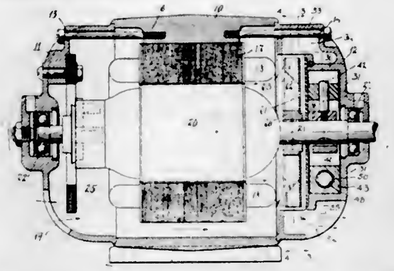
4. A light fixture comprising a socket holding portion and a shade holding flange spaced beneath the same and connected thereto, ribs and projections upon said socket holding portion and a shell surrounding said socket holding portion and having inclined ribs adapted to engage the projections and ribs on the socket holding portion, said shell being movable toward and away from the shade supporting flange.

1,380,132. RADIATOR-CORE. RUSSELL E. BENNER, Flint, Mich. Filed Nov. 1, 1917. Serial No. 199,784. 1 Claim. (Cl. 257—130.)



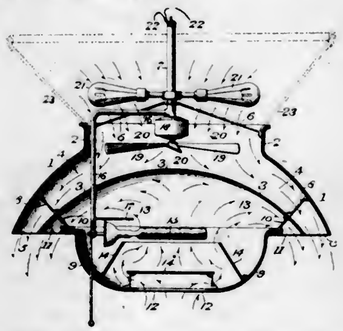
A radiator core, comprising strips each having straight edge portions in contact with another strip and the portions intermediate said edges offset to form conduits, said intermediate portions being expanded at intervals to form transversely-extending enlarged water-cells, and zigzag fin strips respectively arranged between said conduits, said fin strips having edge portions between which the contacting edge portions of the water-tube are embraced, and having intermediate portions fashioned to bear upon the conduit strips intermediate the expanded water-cells thereof to form air cells surrounding said water-cells.

1,380,133. EDGE GRINDING AND POLISHING MACHINE. CHRISTOPHER BROWN, Charleroi, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Sept. 27, 1918, Serial No. 255,885. Renewed Dec. 10, 1920. Serial No. 429,809. 7 Claims. (Cl. 51—237.)



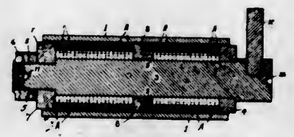
1. In combination in a machine for grinding or polishing the edge of circular plates which comprises a pair of opposing clamping members rotatable about a vertical

axis, an operating spindle for the upper one of said members located on said axis, a raising member provided

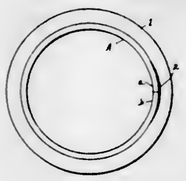


with a rack in which said spindle is swiveled, a pinion meshing with the rack, and means for rotating the spindle.

1,380,134. SPEED-CONTROLLING DEVICE FOR MOTORS. JOEL R. COOK, Cleveland, Ohio, assignor to The Domestic Electric Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 28, 1918. Serial No. 259,932. 18 Claims. (Cl. 188—185.)

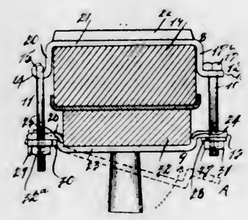


1. The combination of a motor frame comprising a field member and an end cap therefor, an armature within the field member, a flange carried by the end cap on its interior, and a centrifugal brake shoe carried by the armature shaft within said flange and adapted to engage the same.



1,380,135. HEATER. ELBERT A. CORBIN, Jr., Glenside, Pa. Filed Sept. 1, 1920. Serial No. 407,366. 5 Claims. (Cl. 126—248.)

1. An air-heating device composed of a chambered body open at top and bottom, an imperforate dome beneath said body and spaced therefrom, means beneath said dome to heat the same, and an air suction device within the body above said dome, the said body and dome having outlets at their peripheries upon opposite sides of the dome.



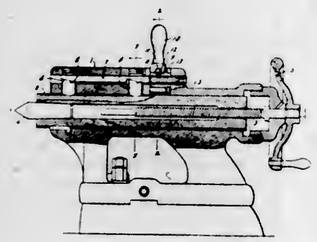
1,380,136. PISTON-RING-FINISHING ASSEMBLY. HARRY C. DOAN and CLIFFORD J. MARSON, Richmond, Ind., assignors to D. & M. Autoparts Co., Richmond, Ind., a Corporation of Indiana. Filed Apr. 2, 1920. Serial No. 370,632. 6 Claims. (Cl. 82—40.)

1. In a piston ring finishing assembly, a pot having a tubular aperture extending therethrough and such as to receive a compressed ring therein, there being a crescent enlargement in one portion of the inner wall of the pot, with the ends of the ring located centrally of the crescent, substantially as set forth.

1,380,137. GRIPPING ATTACHMENT FOR TIRES. PHILIP J. DONOHUE, New York, N. Y. Filed Apr. 16, 1920. Serial No. 374,311. 1 Claim. (Cl. 152—14.)

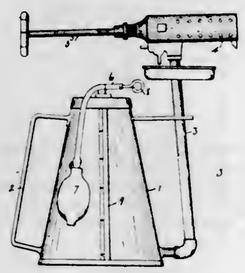
In a tire gripping device, a tread member consisting of a rail to extend transversely of a tire, said rail being provided with a groove extending longitudinally, a fin removably located in said groove, a releasable latch carried by the rail to engage said fin, and means to secure said tread member to a wheel.

1,380,138. VEHICLE-WHEEL. EUGENE C. GASPARD, Cleveland, Ohio. Filed Feb. 4, 1918. Serial No. 215,374. 10 Claims. (Cl. 301—27.)



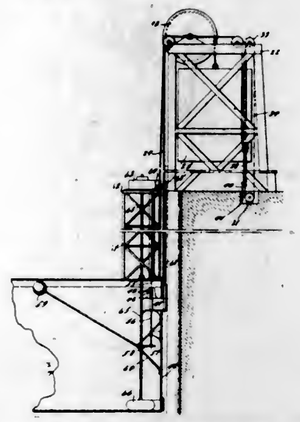
2. The combination, with a fixed rim having laterally spaced beveled seats one of which has a lateral extension,

of a demountable rim having laterally spaced beveled seat-engaging portions one of which has a lateral extension parallel with the first mentioned extension, and a beveled rib carried by said demountable rim intermediate of such



portions, an expansible and contractible ring connected to said fixed rim and having a beveled surface adapted to coöperate with such beveled rim, and means carried by said fixed rim for expanding and contracting said ring.

1,380,139. TAILSTOCK. WILLIAM A. GREAVES, Cincinnati, Ohio. Filed Mar. 10, 1919. Serial No. 281,844. 5 Claims. (Cl. 82—31.)

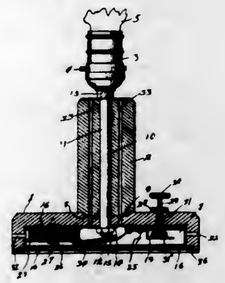


1. A device of the class described, comprising a frame, a spindle, a pair of radial clamps spaced longitudinally of and engaging the spindle, a translatory actuator having wedge engagement with the clamp elements, means for translating the actuator, and means for varying the zone of actuator translation.

1,380,140. PAINTER'S BLOWTORCH. WILLIAM GRETSINGER, Baltimore, Md. Filed Oct. 26, 1920. Serial No. 419,717. 2 Claims. (Cl. 158—33.)

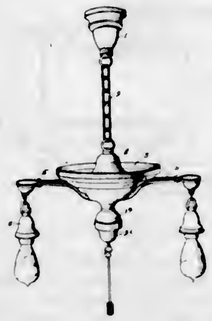
1. A blow torch comprising a gasolene holder, a burner, a pipe leading from said gasolene holder to said burner, and a blade projecting vertically along the outer surface of said gasolene holder.

1,380,141. LIFTING-DOCK. THOMAS HAYDEN HAMILTON, New York, N. Y. Filed July 6, 1918. Serial No. 243,580. 16 Claims. (Cl. 61—65.)



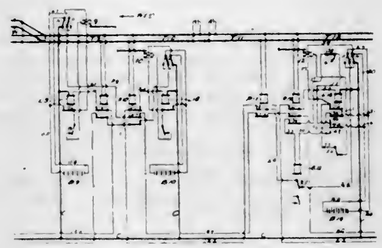
1. In a lifting dock, the combination of submersible pontoons, individual means to evacuate the water from said pontoons, and automatic regulating mechanism for each evacuating means whereby the rate of evacuation is proportional to the weight supported on each pontoon.

1,380,142. PLATING-BATH. HUGO H. HANSON and ALBERT C. WALKER, Bangor, Me., assignors, by mesne assignments, to Eastern Manufacturing Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 17, 1919. Serial No. 338,734. 3 Claims. (Cl. 204—1.)



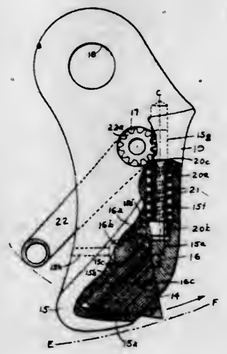
1. An electro-plating bath for metals, which contains, in addition to a salt of the metal to be deposited, a relatively small proportion of the soluble material contained in the sulfite liquor resulting from cooking wood by the sulfite process.

1,380,143. PORTABLE ELECTRIC LAMP. WILLIAM A. HARVEY, Scranton, Pa. Filed Mar. 18, 1920. Serial No. 366,734. 4 Claims. (Cl. 240—81.)



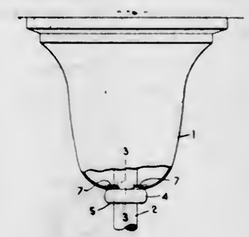
1. A portable electric light fixture comprising a base, a vertical support projecting from said base, an electric light bulb positioned upon said support, a circuit for said light and a switch for controlling said circuit, said base being provided with a chamber, a removable resistance unit being interposed in said circuit and a separable means positioned in said chamber for varying the amount of resistance through which the current to the light must pass, said means comprising a multiplicity of superimposed metal contacts, and a base plate upon which said contacts are mounted, said means being operatable from a point outside said chamber, substantially as described.

1,380,144. ELECTRIC CHANDELIER FIXTURE. WILLIAM A. HARVEY, Scranton, Pa. Filed Apr. 24, 1920. Serial No. 376,186. 3 Claims. (Cl. 240—78.)



1. A chandelier fixture having as a part thereof an inverted bell-shaped housing and electric lamps and means for varying the degree of illumination of said lamps and particularly adapted for use with a chandelier which comprises a circular resistance element contained in said inverted bell-shaped housing, a circuit including said electric bulbs and said resistance element, a switch for controlling said resistance element, comprising a plurality of spring contact members, and means operable from a distance for causing said spring contacts to engage one another, as and for the purpose described.

1,380,145. DIRECTIONALLY-CONTROLLED SIGNAL SYSTEM. ROBERT J. HEWETT, Westfield, N. J. Filed Jan. 16, 1918. Serial No. 212,021. 12 Claims. (Cl. 246—33.)

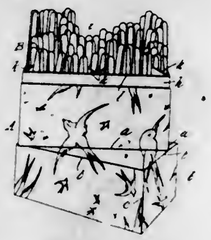


1. In an electric railway signal system, a stretch of single track divided into track sections, two signals along said track for governing traffic in one direction, means including a line relay for controlling each of said signals, means including a polarized relay for causing the operation of the signals in one order when a train passes along the trackway in the direction governed by said signals and in a different order when the train passes along the trackway in the opposite direction, and means operated by the train upon entering the stretch while traveling in said opposite direction and located at a point in advance of the train for controlling the polarized relay.

1,380,146. CUTTER-TIP. JOSEPH L. HILLER, Mattapoisett, Mass. Filed Dec. 15, 1919. Serial No. 344,904. 10 Claims. (Cl. 83—11.)

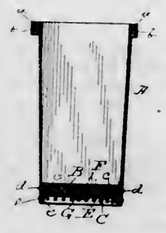
1. A cutter tip, for use with rotary beater shanks, said cutter tip consisting of a suitable piece of material of truncated regular tetrahedral form having two triangular surfaces perpendicular to each of two opposite edges.

1,380,147. CANOPY FOR ELECTRIC-LIGHT FIXTURES. GEORGE W. HOAR, Waltham, Mass., assignor, by direct and mesne assignments, to Service Electric Manufacturing & Supply Company, a Corporation of Massachusetts. Filed Oct. 22, 1920. Serial No. 418,750. 3 Claims. (Cl. 240—87.)



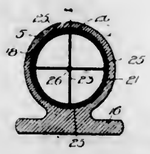
1. In a device of the class described, the combination with a tube or pipe projecting from a wall, of a member surrounding the tube or pipe for giving the desired finish, and a clamping collar also surrounding the tube or pipe and swiveled to the member, one of said parts having resilient fingers and the other having cam faces acting on the fingers as the collar is turned thereby to cause said fingers to be clamped between the cam faces and the tube or pipe and to be forced against the pipe with sufficient pressure to hold the member from movement longitudinally of the pipe.

1,380,148. DEVICE FOR DISPLAYING THE COVERING OF BOXES AND OTHER CONTAINERS. VERNON A. JOY, New York, N. Y. Filed Mar. 12, 1921. Serial No. 451,857. 5 Claims. (Cl. 40—126.)



1. A device for displaying the covering material of containers, comprising a flat part made of the covering ma-

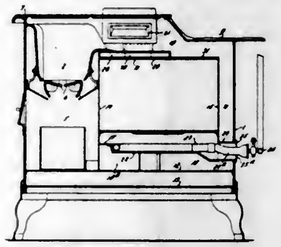
terial which it is proposed to use on the containers and which is cut and lined to represent the container, and a



flat part arranged above said first mentioned part and which is provided with a representation of the interior of the container.

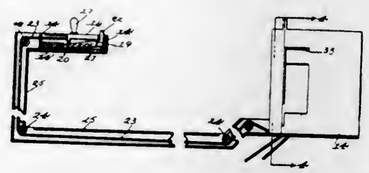
1,380,149. ICE-CAN. CHARLES KAPPEL, Chicago, Ill. Filed Mar. 25, 1920. Serial No. 368,513. 4 Claims. (Cl. 220—68.)

1. In an ice can, a body having side walls and a double bottom comprising upper and lower spaced plates, the lower plate having a plurality of openings therein through which is introduced a plastic heat insulating material in liquid state to completely fill the space between said bottoms, and means for sealing said openings.



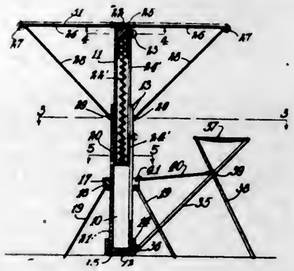
1,380,150. FRONT SIGHT FOR GUNS. CHARLES R. KEERAN, Chicago, Ill. Filed Nov. 16, 1917. Serial No. 202,277. 4 Claims. (Cl. 33—47.)

1. A front sight for guns, consisting of a hood secured to the gun barrel, a shell removably positioned within the hood, the engaging surfaces of the shell and hood being tapered, permitting a tight fit therebetween if desired, and coöperating means on the hood and shell permitting the entrance of the latter only when it is in a predetermined rotative position relative to the hood, and cross hairs mounted within the shell, substantially as described.



1,380,151. COMBINED GAS AND COAL RANGE. FRANK V. KNAUSS, Portsmouth, Ohio. Filed Mar. 19, 1919. Serial No. 283,569. 2 Claims. (Cl. 126—36.)

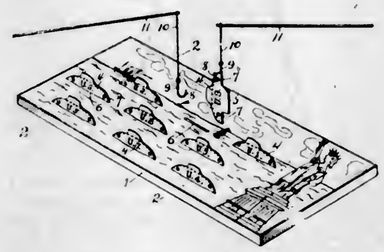
1. A combined solid fuel and gas burning stove comprising an outer casing and an oven casing within the outer casing and therewith forming a solid fuel burning chamber at one side of said casings and a down-draft flue for said chamber surrounding the top, opposite side and bottom of said oven casing, a stack flue for said down-draft flue, said oven casing having a centrally recessed base and a double-walled top, the double-walled top providing an intermediate flue communicating with the interior of the



oven and said stack flue, a conduit joined to said casings and extending horizontally through said down-draft flue at the oven base providing a constantly open air passage into the oven chamber, and a gas burner disposed within the recess of said oven base having a gas inlet pipe neck extending through said air passage.

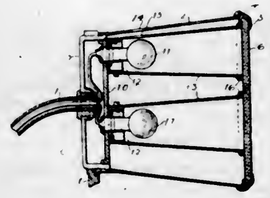
1,380,152. DIRECTION-INDICATOR. GEORGE KOMLOSY, Yonkers, N. Y. Filed May 5, 1920. Serial No. 379,094. 2 Claims. (Cl. 74—5.)

1. In a signaling system for automobiles, a mechanical switch in front of the driver's seat, comprising a casing, a top plate on said casing having two parallel longitudinal slots, two recessed blocks within said casing, springs supporting said blocks at one end, buttons upon the upper ends of said blocks projecting above the top plate, sliding plates in said casing, a pair of lower projections for each plate adapted to engage with their projections the recesses of said block, and cables connecting said sliding plates with the signaling means of said system, said buttons adapted to be operated for disengaging said projections from the recesses in said block for slackening said cables.



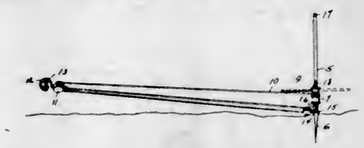
1,380,153. PORTABLE TABLE AND CHAIR. MICHAEL KOTUN, New Geneva, Pa. Filed Dec. 7, 1920. Serial No. 428,880. 3 Claims. (Cl. 45—11.)

1. In a collapsible table, a tubular pedestal comprising a lower outer section and an upper inner telescopic section,



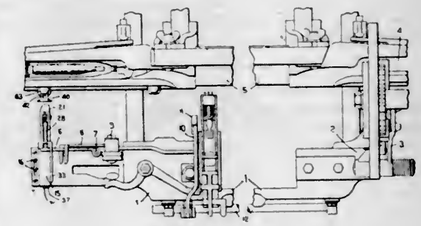
said lower section being formed with a bayonet slot comprising a long vertical arm, and a short arm at its upper end, a pin on said upper section near the lower end thereof, said upper section being also formed with a bayonet slot comprising a long vertical arm, and a short vertical arm at its upper end, a head slidable in the upper section, a pin on said head engaging in the last mentioned slot, and a series of arms hinged to said head and adapted to support a table top, and a coiled tension spring normally urging said head into said upper section.

1,380,154. GAME. LOUIS LAVAL, Kansas City, Mo. Filed Sept. 23, 1918. Serial No. 255,264. 2 Claims. (Cl. 46—56.)



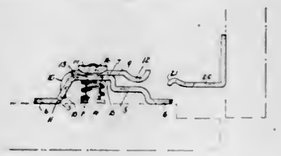
1. In a game of the kind described, a base having in its upper side a vertical slot, and a relatively thin flat removable member having adjacent to its ends respectively at its lower edge two flat portions adapted to rest upon said base and provided intermediate of said flat portions with a keel portion adapted to enter said slot, the end edges of the keel portion converging downwardly toward each other, said removable member having respectively adjacent to its ends over said flat edge portions two transverse perforations, either of which is adapted to receive a removing hook, substantially as set forth.

1,380,155. SIGNAL-LAMP. WILLIAM FRANCIS MCMAHON, Johnstown, Pa. Filed Aug. 27, 1917. Serial No. 188,327. 1 Claim. (Cl. 177—329.)



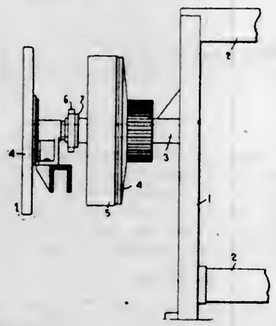
A signal lamp including a frusto-conical casing, a back at the smaller end of said casing, a diaphragm held by the back, electric light bulbs carried by said diaphragm and arranged in triangular relation, flaring housings within said casing having their smaller ends fitted over said bulbs and abutting against said diaphragm, collars received within the smaller ends of the housings and secured thereto, said collars having flanges secured to the diaphragm, a transparency at the larger end of said casing lying against the large ends of said flared housings and made opaque except at areas defined by the larger ends of the housings with signal indicia on such areas, bands around the flared ends of the housings, said casing and housings having registering apertures at the sides thereof, and means for selectively lighting said electric bulbs.

1,380,156. PULLING IMPLEMENT. HERMAN EUDELLE MOORE, Tallahassee, Fla. Filed May 3, 1920. Serial No. 378,422. 1 Claim. (Cl. 254—150.)



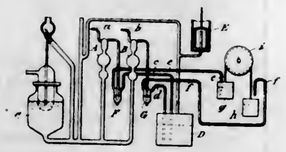
A device comprising a bar having a flattened lower end and a handle at its upper end, a drum rotatively mounted upon the bar, an eye upon the drum, a bar adapted to pass through said eye, a pawl and ratchet connection between the drum and the bar, pulleys and a cable passing over said pulleys and engaging the drum.

1,380,157. NEEDLE-FEELER. HERBERT NICHOLS, Holyoke, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed May 7, 1920. Serial No. 379,508. 5 Claims. (Cl. 139—85.)



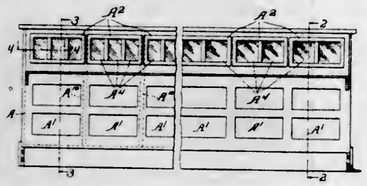
1. A feeler mechanism for looms comprising an impinging member adapted to engage and be moved forwardly by the running filler carrier upon a detecting beat, a detecting member movable with and with respect to the impinging member, means actuated by movement of the detecting member with respect to the impinging member followed by forward movement of the detecting member with the impinging member for initiating filling replenishment, a locking device adjacent the said members acting to lock the detecting member against movement with respect to the impinging member, and means carried by the lay for releasing the locking device when on the beat up the detecting member has reached a predetermined position of proximity to the path of travel of the running filling carrier.

1,380,158. SPRING CATCH AND LOCK. WILLIAM C. REISCH, Plantsville, Conn. Filed Dec. 21, 1920. Serial No. 432,228. 3 Claims. (Cl. 292—70.)



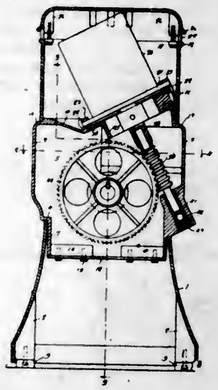
1. A spring catch and lock, comprising a strip formed with an arch and a shoulder, a catch resting upon said arch and formed with a nose, a stud extending through said arch and catch, a locking plate secured to the outer end of the stud, and provided with bearings adapted to be turned into the said catch, a locking finger adapted to be entered between the catch and shoulder.

1,380,159. HANDWHEEL FOR LOOMS AND OTHER MACHINES. ALONZO E. RHOADES, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Aug. 5, 1920. Serial No. 401,489. 5 Claims. (Cl. 74—33.)



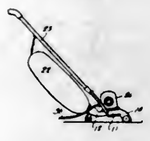
1. A hand wheel for manually rotating a power driven shaft comprising a hub secured to the shaft, a wheel body rotatably mounted on the hub, and means, automatically unlocked by centrifugal action upon the power driven rotation of the shaft and hand wheel, for locking the wheel body to the hub.

1,380,160. GAS-ANALYZING APPARATUS. OLOF RODHE, Stockholm, Sweden, assignor to Svenska Aktiebolaget Mono, Stockholm, Sweden, a Corporation. Filed Jan. 26, 1920. Serial No. 354,282. 2 Claims. (Cl. 23—3.)



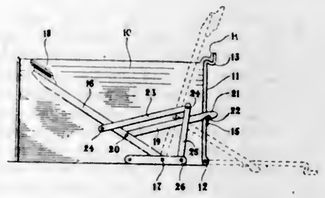
1. A gas analyzing apparatus provided with two or more primary measuring vessels, said vessels being arranged so that alternately the gas from one of these measuring vessels passes through the remaining members of the apparatus, while the gas from the remaining vessel or vessels flows past these members.

1,380,161. DISPLAY-COUNTER. WILLIAM T. SHERER, Chicago, Ill. Filed Apr. 12, 1920. Serial No. 373,108. 2 Claims. (Cl. 211—11.)



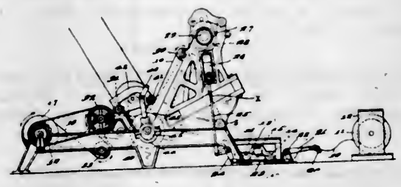
1. As a new article of manufacture, a display counter subdivided into vertical sections, having a row of superimposed drawers, in the rear of each section and a group of separate display pockets arranged on the front of each section, in horizontal alinement, adjacent but beneath the top of the counter, the number of pockets in each section equaling the number of drawers therein.

1,380,162. ELECTRIC POWER MECHANISM. MILTON H. SPIELMAN, Cleveland, Ohio. Filed Sept. 8, 1919. Serial No. 322,593. 12 Claims. (Cl. 74—56.)



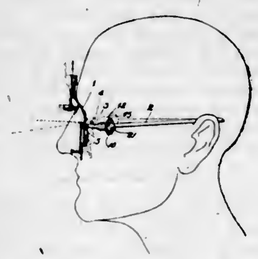
1. A power plant comprising a housing having a plurality of rectangular portions, one of said portions constituting a base, a power shaft extending laterally from one of the portions, a motor having an inclined armature shaft within one of the portions and connected with the power shaft, said motor and power shaft being disposed one above the other.

1,380,163. VACUUM-CLEANER SWITCH-OPERATING MECHANISM. MILTON H. SPIELMAN, Cleveland, Ohio, assignor to The Domestic Electric Company, Cleveland, Ohio, a Corporation of Ohio. Original application filed Dec. 26, 1916, Serial No. 138,758. Divided and this application filed Sept. 8, 1919. Serial No. 322,594. 9 Claims. (Cl. 15—60.)



8. A vacuum cleaner having a swinging propeller handle arm thereon and an electric switch therein, coöperating means between the arm and the switch for closing the switch when the arm is swung to propelling position and for opening the switch when the arm is swung to non-propelling position.

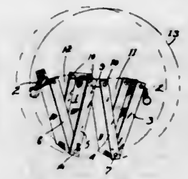
1,380,164. AUTOMATIC MAIL-BOX SIGNAL. SIDNEY E. STAFFORD, Ashdown, Ark. Filed Oct. 8, 1920. Serial No. 415,467. 2 Claims. (Cl. 232—35.)



1. The combination with a mail box including a movable door, of a lug carried by said door and projecting beyond the edge thereof, a lever pivotally mounted on the side of said mail box, an arm pivotally connected at one end to said lever, said arm provided with a notch adjacent its other end adapted to receive a portion of said lug whereby when said door is opened said arm and said lever will be moved from their normal position, and means to limit the forward and rearward movement of said lever substantially as described.

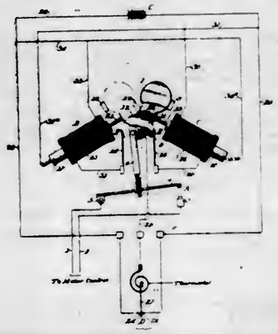
1,380,165. WIRE-FENCE LOOM. LAFE SWANK and JAMES E. VAN DEVENTER, Anderson, Ind., assignors to Dwiggins Wire Fence Company, Anderson, Ind., a Corporation of Indiana. Filed Jan. 23, 1919. Serial No. 272,641. 2 Claims. (Cl. 140—134.)

1. In a fence-fabric machine, the combination of supports between which longitudinal wires are to advance step-by-step, of tension means back of said supports, independent storage rolls back of the tensioning means and delivering independent wires thereto, means acting upon said wires between the tensioning means and storage rolls for intermittently supplying slack in said wires during a period of non-movement of said wires immediately beyond the tensioning means, means acting upon said wires beyond said supports for continuously advancing said wires, and a reciprocatory member acting transversely on the wires behind said continuous advancer for varying the effect of said continuous advancer on the wires between said supports.



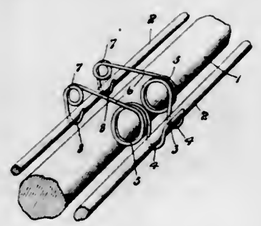
1,380,166. TRIAL SPECTACLE-FRAME. CHARLES F. WALL and FREDERICK HARKER, Philadelphia, Pa., assignors to Wall & Ochs, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 21, 1919. Serial No. 332,224. 7 Claims. (Cl. 88—20.)

4. A trial spectacle frame comprising temples, each temple including front and rear parts, a gear connected to one of said parts, and a rack carried by the other of said parts, the said gear being in engagement with the said rack whereby upon rotation of the said gear angular adjustment between the said parts is effected.



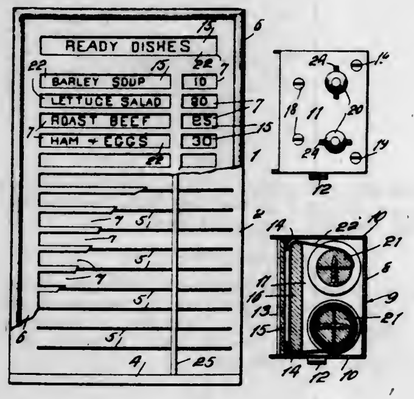
1,380,167. COMBINED HAMMOCK AND KNAPSACK. SVANTE WESTER, San Francisco, Calif. Filed Feb. 24, 1920. Serial No. 360,612. 6 Claims. (Cl. 224—9.)

1. A hammock body in combination with an edging of a stiffer material, said material divided, on each side, into four longitudinal sections, the outer sections pivotally connected to the next adjacent sections and adapted, when turned at right angles to the body of the hammock, to



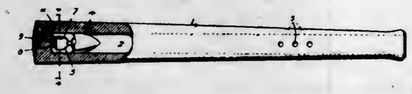
swing upon said pivotal points to form two pockets, said pockets connected by links and pivots and adapted to swing thereupon in knapsack form.

1,380,168. THERMOSTATIC SWITCH. GEORGE H. WHITTINGHAM, Bancroft Park, Md., assignor to Monitor Controller Company of Baltimore, a Corporation of Maryland. Filed Dec. 20, 1917. Serial No. 208,172. 5 Claims. (Cl. 175—336.)



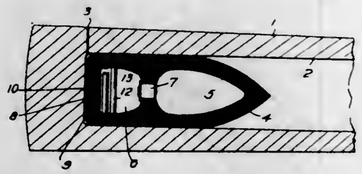
4. The combination with a controlled member and a magnet for actuating the same of a circuit for the magnet including a switch, means operated by the magnet for establishing a circuit for the magnet in shunt to said switch immediately upon the closure of said switch, and means operated by the magnet for deënergizing the magnet after it has moved the controlled member.

1,380,169. SPARK AND THROTTLE ROD TENSION APPLIANCE. FLOYD G. WITHROW, Grand Rapids, Mich. Filed July 29, 1920. Serial No. 399,737. 4 Claims. (Cl. 74—39.)



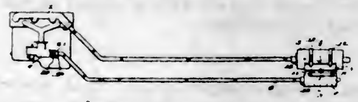
4. In combination, a steering post, spark and throttle rods paralleling the post, one at each side thereof, and a single wire spring means detachably connected at its ends to the rods and passing across and bearing against the post, substantially as described.

1,380,170. CHANGEABLE ADVERTISING-SIGN. WILLIAM A. ZEIDLER and MAX L. FERENTZ, New York, N. Y. Filed Aug. 23, 1919. Serial No. 319,322. 4 Claims. (Cl. 40—86.)



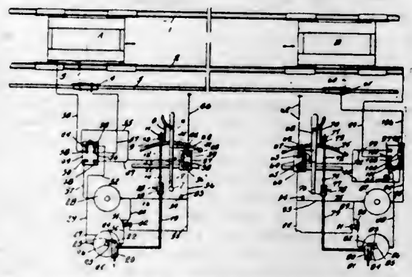
1. In a device of the class described, a sign with a top and bottom, and a number of transverse partitions, a cover with the openings registering with the spaces between said partitions, removable boxes with glass fronts adapted to be inserted in the spaces between said partitions and opposite said openings, changeable signs in said boxes and means for shifting said signs.

1,380,171. ORDNANCE. CHARLES G. ABBOT, Washington, D. C. Filed Jan. 11, 1919. Serial No. 270,686. 2 Claims. (Cl. 89—1.)



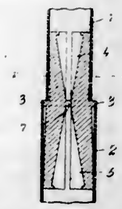
2. The combination, with a smooth-bore gun having pressure relieving vents near the muzzle, of a projectile having a chamber containing a propellant, and being provided with discharge passages, whereby the projectile is propelled forwardly and rotated around its axis when the propellant is actuated, the charge being so proportioned that the rotative force is terminated through the exhaustion of the propellant before the projectile leaves the gun.

1,380,172. SELF-PROPELLED PROJECTILE. CHARLES G. ABBOT, Washington, D. C. Filed Jan. 11, 1919. Serial No. 270,687. 3 Claims. (Cl. 102—29.)



1. A self-propelled projectile, having a chamber, a propellant disposed within the chamber, the body portion of the projectile having a bore tangent to the chamber wall, and terminating at the rear end of the projectile, and a baffle within the chamber for preventing circulatory currents therein.

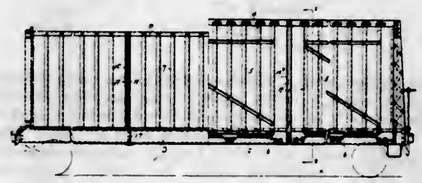
1,380,173. ATTACHMENT FOR INTERNAL-COMBUSTION ENGINES. ARTHUR JAMES ABEL, Brooklyn, N. Y. Filed Apr. 9, 1920. Serial No. 372,695. 4 Claims. (Cl. 123—119.)



1. In an attachment for internal combustion engines, the combination of a cylinder for mixing partly burned gases and fresh air, a saddle secured to said cylinder, a saddle adapted to be secured against the muffler of an engine, means for securing said saddles to each other, and means operable to secure the second said saddle to the muffler of an engine.

1,380,174. AUTOMATIC STOP MECHANISM FOR RAILROADS. ROBERT C. ALBURY and LEFFY T. HAYMAN, Tampa, Fla. Filed Dec. 28, 1920. Serial No. 433,726. 5 Claims. (Cl. 246—67.)

5. In combination, a railway, a third rail insulated therefrom, a locomotive on the railway, contact means carried by and insulated from the locomotive and moving in engagement with the third rail, a throttle lever on the locomotive biased for closed position, a latch for holding the lever open, latch releasing means including an electric motor, a dynamo on the locomotive driven at all times thereby, means for normally disconnecting the motor from the dynamo, means for connecting the motor to the dynamo under desired conditions, normally operable means for cutting said connecting and disconnecting means out of circuit with the railway and third rail, means for changing the direction of current through the locomotive for causing the current to flow at all times in the same direction through the said connecting and disconnecting means, and means operable by the closing of the throttle lever to short circuit the locomotive and said means to the exclusion of said dynamo and motor, substantially as described.



1,380,175. COUPLING-SLEEVE FOR TUBULAR BODIES. WILHELM GUSTAV ANDERSEN and JOHANNES HENRIK BREVIG, Christiania, Norway. Filed June 17, 1920. Serial No. 389,783. 2 Claims. (Cl. 287—1.)

1. A bisected coupling sleeve comprising two separate half sleeves, each of which is provided with a separating

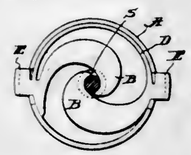


plate for the abutment of the tubes to be coupled together, and sleeve parts projecting from each side of said plates and fitting into the ends of the said tubes, said half-sleeves leaving between them a space adapted for the driving in of wedges.

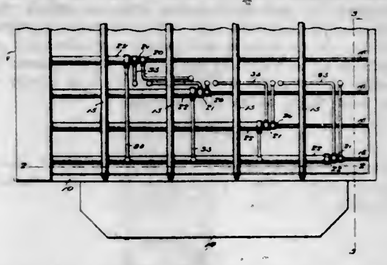
1,380,176. CANE-CAR. HARRY T. ANDERSON, Butler, Pa., assignor to Standard Steel Car Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 10, 1921. Serial No. 436,260. 5 Claims. (Cl. 105—376.)

1. A railway car having a partition comprising side posts each composed of two Z-bars having corresponding flanges placed together and planks secured to the said flanges.

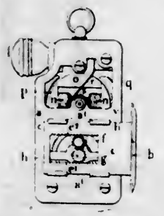
1,380,177. FASTENER. LOUIS ARKIN, Boston, Mass. Filed Apr. 10, 1920. Serial No. 372,877. 5 Claims. (Cl. 24—211.)



1. A socket member of a fastener comprising a casing having a stud receiving aperture, a pair of stud retaining arms curved around opposite sides of said aperture within the casing, a curved spring within the casing, and a pair of stud releasers extending through the casing, one of said arms and one of said releasers having a common junction with said spring on one side of said aperture and the other of said arms and the other of said releasers having a common junction with said spring on the other side of said aperture.

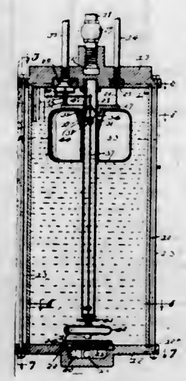
1,380,178. METHOD OF MAKING WROUGHT IRON. JAMES ASTON, Pittsburgh, Pa., assignor to A. M. Byers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Feb. 4, 1920, Serial No. 356,309. Renewed Sept. 7, 1920. Serial No. 408,773. 4 Claims. (Cl. 75—27.)

1. In the manufacture of wrought iron, the steps consisting of preheating the comminuted or granulated product of a steel-making operation of substantially the same composition, feeding the preheated material into a bath of iron silicate slag, and forming a ball therein.



1,380,179. APPARATUS FOR USE IN ASSORTING CIGAR-WRAPPERS. THOMAS BAER and WILLIAM H. BITLER, Terre Hill, Pa. Filed Aug. 10, 1918. Serial No. 249,308. 2 Claims. (Cl. 131—56.)

2. The combination with a plurality of article supporting devices spaced apart, of a plurality of sets of shafts, the shafts of each set being concentric and differing in length from the shafts of an adjacent set, each shaft being adapted for connection with a separate element of a register, and one of the shafts of each set serving to rotatably mount the other shafts of that set,



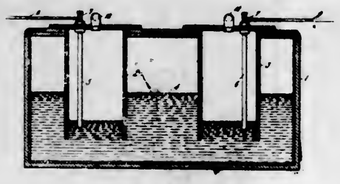
and means for operating selected shafts of various sets from a common point adjacent a given article supporting device.

1,380,180. MAGNETO POCKET-LAMP. GEORGES MAXIME BEAUDOT, Paris, France, assignor to Georges Maxime Beaudot and Auguste Anatole Lion, Paris, France. Filed Dec. 9, 1920. Serial No. 429,541. 4 Claims. (Cl. 240—8.5.)

1. In a magneto pocket lamp, a sliding and spring pressed push-piece having two racks, pinions meshing with each other, and one pinion meshing with one rack, and the other pinion meshing with the other rack, and means for operating the movable part of the magneto from one of the said pinions.

1,380,181. PUMP. ERASMUS W. BECK, Griffin, Ga. Filed Nov. 13, 1919. Serial No. 337,750. 5 Claims. (Cl. 103—8.)

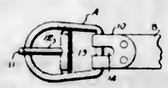
1. A pneumatic pump having water inlet and outlet passages, the former being valved, and pressure supply and exhaust valves controlling pressure inlet and relief ports, a float actuatable by the level of the water in the casing or reservoir, a valve actuating element movable to reverse the positions of said pressure inlet and



exhaust valves and arranged in the path of movement in one direction of said float, a buoyantly actuated locking device for maintaining said valve actuating element in position to maintain said inlet and exhaust valves respectively in their open and closed positions, and means actuatable by said float at the limit of its movement in the opposite direction for actuating the locking device to release said valve actuating element.

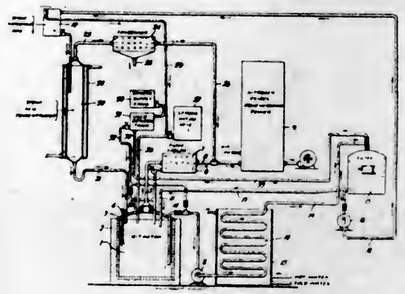
1,380,182. WELL-LINER CLAMP. ROBERT J. BIGELOW, Santa Anna, Tex. Filed May 17, 1920. Serial No. 382,028. 3 Claims. (Cl. 166—4.)

1. A liner for wells comprising a cylinder made of resilient material and having a longitudinal slit therein so that it may be contracted, said casing having holes therein for receiving a breakable strip, some of said holes being arranged adjacent the split edges and other being diametrically opposite the split.



1,380,183. GAS-GENERATOR. MARTIN BOISEN, Sandusky, Ohio. Filed July 6, 1920. Serial No. 394,168. 2 Claims. (Cl. 204—5.)

1. An apparatus of the character described, comprising a decomposing tank containing water, a pair of tubular cells located in the tank having open lower ends submerged in the water, an anode in one cell having its lower end normally submerged in the water in the cell, a cathode in the other cell having its lower end normally submerged in the water in the cell, said anode and said cathode terminating at their lower ends in a plane above the lower ends of the cells in which they are located, oxygen and hydrogen tanks communicating respectively with the upper portions of said cells, and a source of electricity included in circuit with said anode and cathode.

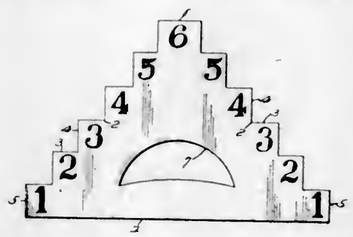


1,380,184. ATTACHMENT FOR TAPE-MEASURES. GEORGE ALBERT BRANDENBURG, St. Francis, Kans. Filed Jan. 27, 1919. Serial No. 273,369. 4 Claims. (Cl. 33—137.)

1. The combination of a tape, an end clip comprising a bent strip having the ends bent back to receive the end of the tape therebetween and a means for securing the end of the tape therebetween, a portion of said clip being slitted between the side edges thereof longitudinally of the clip, a loop, said loop comprising side portions and connecting end portions, one of the end portions extending through the bent portion of the clip and forming an opening with the slitted portion of the clip, a member extending transversely of the loop, and having its ends pivotally mounted in the side portions of the loop, at a

point substantially midway between the connecting end portions, and a device fixed to said member extending longitudinally of the loop, said device having a bent end portion forming a spur, said device being of such a length that when moved on pivoted member in one direction, the spur will be positioned within the opening of the clip, and when moved on the pivoted member in the opposite direction, the device will contact with the other connecting end member, with the spur extending outward so that the said spur may be used to position one end of the tape.

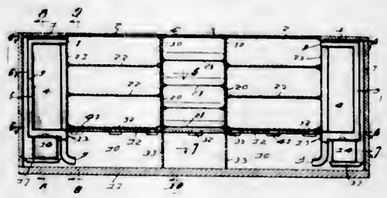
1,380,185. PROCESS OF NITRATING BENZOL. THEODORE J. BREWSTER, Perth Amboy, N. J. Filed Nov. 20, 1917. Serial No. 202,930. 12 Claims. (Cl. 23—24.)



1. In the nitration of benzol, the process which comprises reacting upon benzol with nitric acid in the presence of a mercury compound in a suitable reaction vessel while continuously withdrawing portions of the mixture, cooling the withdrawn portions to produce crystalization, filtering out the crystals and returning the filtered liquid to the reaction vessel.

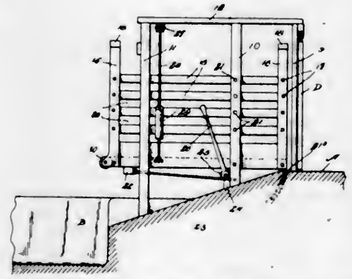
1,380,186. PROCESS OF MAKING NITROPHENOLIC COMPOUNDS. THEODORE J. BREWSTER, Perth Amboy, N. J. Filed Oct. 2, 1918. Serial No. 256,524. 4 Claims. (Cl. 23—24.)

1. The process of making picric acid including the steps of sulfonating phenol, cooling to approximately 50° C., diluting, nitrating to the mono-nitro stage by adding nitric acid slightly in excess of that required for introduction of one nitro group while maintaining the temperature below 70° C. and thereafter nitrating to tri-nitro stage by adding further nitric acid and permitting the temperature to rise above 70° C.



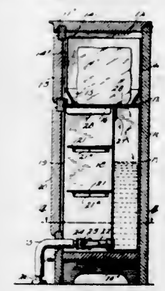
1,380,187. MEASURE AND GAGE. CARRIE H. BROSE, San Diego, Calif. Filed June 20, 1918. Serial No. 241,000. 1 Claim. (Cl. 33—168.)

A measurer and gage comprising a triangular shaped member having one edge formed straight and the two remaining edges provided with notches, whose sides are respectively perpendicular to and parallel with the straight



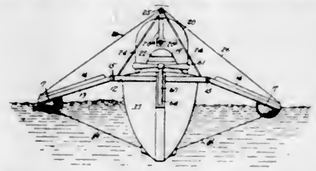
edge, the notches beginning with the straight edge, being progressively designated toward the topmost notches where a single designation serves in common for the two.

1,380,188. REFRIGERATOR. RAYMOND K. BURRITT, Seligman, Ariz. Filed Feb. 13, 1919. Serial No. 276,703. 6 Claims. (Cl. 62—37.)



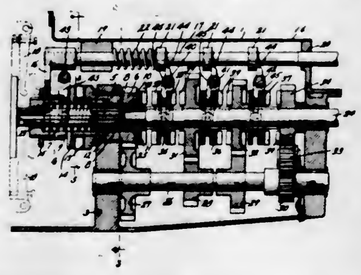
2. In a refrigerator, a refrigerating compartment, a plurality of display compartments for perishable commodities, means for circulating the air of said latter compartments through the refrigerating compartment to absorb the heat of the air, and removable division plates whereby the said circulation may be confined to one or more of the display compartments, the division plates having attached on their edges a fabric binding to prevent the leakage of air past them.

1,380,189. STOCK-CHUTE FOR DIPPING-VATS. CLEMENT P. BURT, Wallis, Tex. Filed June 21, 1920. Serial No. 390,635. 2 Claims. (Cl. 119—158.)



1. A device of the character described comprising two pairs of posts extending vertically and arranged in spaced relation, a chute including sides each formed of a plurality of slats connected at their ends and each pivotally connected with the posts of one pair, said pivot points being nearer one end of the chute than the other whereby the discharge end of the chute will be heavier, pulleys connected with the other pair of said posts, cables secured to said longer end of the chute and trained about said pulleys, counterbalancing weights carried by said cables for holding said discharge end normally elevated; and means connected with said chute and said first named pair of posts whereby to serve as a brake for controlling the speed of movement of said chute.

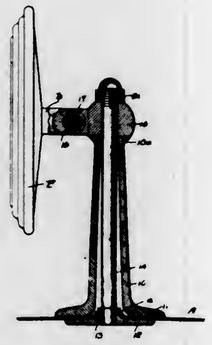
1,380,190. REFRIGERATOR. MAX COHEN, New York, N. Y., assignor of one-half to Jonas Rosenstock, New York, N. Y. Filed Apr. 17, 1920. Serial No. 374,736. 1 Claim. (Cl. 62—57.)



A refrigerator including a body, a water tank removably supported at its lower end in said body and having an open top, said tank being U-shaped in cross section presenting forwardly extending sides and defining at the front of the tank a storage compartment, a removable cover on said tank, said cover forming a closure for said storage compartment and provided with rearwardly extending members bridging the rear open-top portion of said tank, there being an ice chamber above said tank, a removable lining in said ice chamber having an open top and an open bottom, said lining resting on said cover, the back of the lining resting on said rearwardly extending members of the cover.

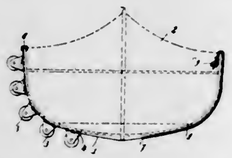
1,380,191. FLYING-CRUISER. NATHAN G. COX, Livengood, Alaska. Original application filed Nov. 19, 1918, Serial No. 263,212. Divided and this application filed Oct. 18, 1919. Serial No. 331,672. Renewed Apr. 1, 1921. Serial No. 457,705. 4 Claims. (Cl. 244—12.)

1. An aeroplane, comprising a hull, wings projecting from the hull and adapted to support the hull in the air, said wings comprising sections hinged together, and the outer sections of said wings adapted to be moved downwardly and coöperate in supporting the hull in upright position when the aeroplane is at rest.



1,380,192. TRANSMISSION-GEARING. WILLIAM STANTON CUNNINGHAM, Shreveport, La. Filed Apr. 14, 1920. Serial No. 373,733. 11 Claims. (Cl. 74—59.)

1. A transmission gearing, comprising a drive shaft, a driven shaft in alinement with the drive shaft, a coun-

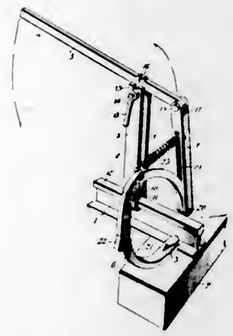


tershaft parallel to the driven shaft, gear wheels fixed to the countershaft and meshing with gear wheels loose on the drive shaft and the driven shaft, clutches for locking the gears on the drive and driven shafts to said shafts, and foot levers operating the clutches.

1,380,193. HOLDER FOR MIRRORS AND OTHER ARTICLES. HARRIS ARMISTEAD DUGUID, Brooklyn, N. Y. Filed Dec. 9, 1920. Serial No. 429,449. 5 Claims. (Cl. 45—97.)

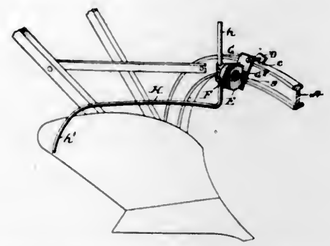
1. A holder of the class described comprising a supporting column in the form of a tubular standard, the base of which forms a clamp element adapted to rest on a fender or other support, a second clamp element adapted to be disposed at the under side of the fender or other support, a post rising from the second clamp element and extending through and above said tubular standard, an element supported on said standard at the top, means to secure to said element the article to be supported, said post extending through said element, and means on the post at the upper end to act on said post and said standard for causing the clamp sections to exert a clamping action on the support.

1,380,194. DEVICE FOR LAUNCHING LIFEBOATS. HUBERT ELSEN, Antwerp, Belgium. Filed July 14, 1920. Serial No. 396,103. 3 Claims. (Cl. 9—22.)



1. In a device of the kind described in combination protecting members, flexible attaching means holding said members together and means whereby said attaching means can be secured to a boat.

1,380,195. PROCESS OF MAKING POTASH. JOSEPH ENDLER, Rochester, Pa. Filed Feb. 5, 1919. Serial No. 275,244. 2 Claims. (Cl. 23—22.)

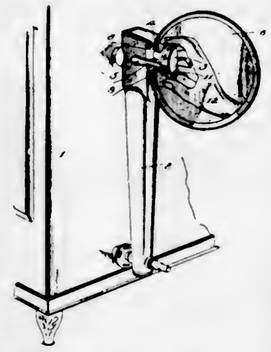


1. The process of making potash from potash-bearing plants consisting in reducing the plants to ashes, and subjecting the ashes to the action of steam to provide moisture for admixture therewith to extract it by lixiviation.

1,380,196. SPIKE-PULLER. JONAS B. ERICKSON, Iron Mountain, Mich. Filed May 11, 1920. Serial No. 380,532. 5 Claims. (Cl. 254—21.)

1. A spike puller, comprising a standard, a lever fulcrumed on the standard, a link pivotally connected to one end of the lever, and a curved claw pivotally connected to the link and disposed at an angle to the plane of the lever.

1,380,197. WEED-TURNING ATTACHMENT TO PLOWS. GROVER C. FANNING, Wichita, Kans. Filed Feb. 20, 1917, Serial No. 149,833. Renewed Jan. 4, 1921. Serial No. 435,011. 2 Claims. (Cl. 97—33.)

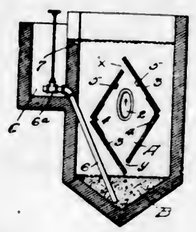


1. A weed turning appliance, comprising a weed turning member having an angularly disposed end rigid therewith, a rotative clamping member having means forming a bearing within which said end may be rotated, relatively to the member; an axial member extending through the clamping member and with which said clamping member and weed turning member may be rotated about an axis which is substantially at right angles to the axis of rotation of the angularly disposed end of the weed turning member, said axial member having a bearing at one end for the angularly disposed end of the weed turning member and being confined against axial movement relatively to said clamping member and movable longitudinally within the latter, a fixed clamping member having means for attaching it to the implement, said axial member also extending through the axis of the fixed member and said fixed and rotative clamping members having abutting faces provided with elements to engage each other and hold the rotative member against rotation when so engaged, and means on the axial member to tighten and loosen it, substantially as described and for the purpose set forth.

1,380,198. DISPLAY-CARD. CHARLES FOSTER FARNHAM, Lorain, Ohio, assignor to American Stove Company, St. Louis, Mo., a Corporation of New Jersey. Filed Dec. 3, 1920. Serial No. 428,049. 8 Claims. (Cl. 40—20.)

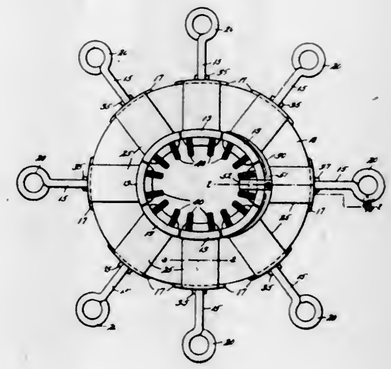
2. A display card having an opening to receive the periphery of a regulating wheel, the display card having

the representation of a hand with the fingers positioned in respect to the opening to indicate that they are grasp-



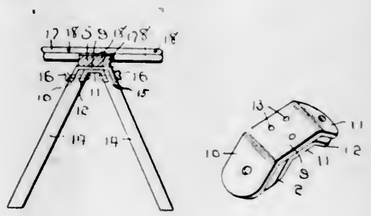
ing the periphery of the wheel, and means for holding the card in position in respect to the wheel.

1,380,199. WEIGHING-FORK. LOUIS FELIX, Warba, Minn. Filed Nov. 21, 1919. Serial No. 339,656. 2 Claims. (Cl. 265—67.)



1. In a weighing attachment of the character described a housing side and end walls, a cover for the housing, a dial carried by the cover, a supporting plate extending through the housing, a shaft rotatably supported by the plate and extending through the cover and dial, a pointer carried by the upper end portion of the shaft for cooperating with the dial, a driving shaft rotatably mounted in the housing and having gear connection with the first mentioned shaft, a handle, a rack connected with said handle and extended into said housing, and a gear carried by the driving shaft and meshing with the rack.

1,380,200. APPARATUS FOR PURIFYING AND DISPOSING OF SEWAGE. WILLIAM C. FERGUSON, St. Louis, Mo. Filed July 22, 1919. Serial No. 312,620. 2 Claims. (Cl. 210—6.)

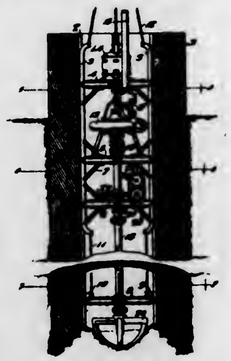


1. An apparatus for purifying and disposing of sewage, comprising a combined sedimentation and flotation chamber, a raw sewage inlet pipe, an effluent discharge pipe, said chamber communicating with said pipes and being arranged in a lower horizontal plane than said pipes, a sludge chamber adapted to hold a body of liquid whose level is above the upper end of said flotation and sedimentation chamber, and passageways leading from the upper and lower ends of said sedimentation and flotation chamber to said sludge chamber.

1,380,201. HAT STRETCHER AND SHAPER. DAVID FREEDLINE, Brooklyn, N. Y. Filed Mar. 17, 1920. Serial No. 366,562. 7 Claims. (Cl. 223—33.)

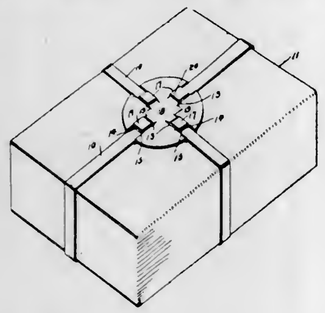
1. A hat stretcher and shaper, comprising a base, a series of stretching and shaping members mounted to slide radially on the said base toward and from a common center, each stretching and shaping member having a depending nut, and radial screw rods screwing in the said nuts and having their inner ends abutting against the base and having their outer ends projecting from the side edge of the base.

1,380,202. QUILTING-FRAME. WALTER F. GAGE, Smith, Nev. Filed May 6, 1919. Serial No. 295,041. 2 Claims. (Cl. 45—24.)



1. A quilting frame including an adjustable frame structure, leg supporting members carried by the frame structure, said leg supporting members including substantially U-shaped plates having web portions of different lengths arranged one above the other and in facial abutment, said web portions being provided with registering openings, means passing through said openings and engaged in the frame structure for maintaining the leg supporting members in position thereon, the angular extremities of the lower plate being arranged in spaced relation to the angular extremities of the upper plate to provide spaces therebetween, inclined legs having the upper terminals confined between the spaced angular extremities of the plates, and means to clamp said legs in position between said angular extremities.

1,380,203. CAISSON-DREDGE. HARVEY C. GLICK, Paris, Idaho. Filed Sept. 23, 1920. Serial No. 412,272. 5 Claims. (Cl. 255—4.)

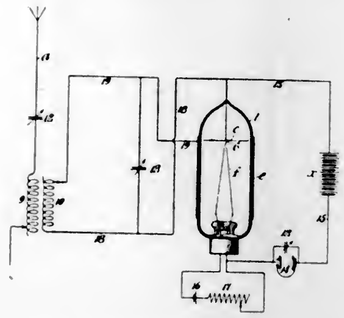


1. A caisson dredge including with a cutter head to loosen earth at the bottom of the caisson and agitate the

earth with water, a suction pump having a discharge emptying above the top of the caisson, and a suction pipe

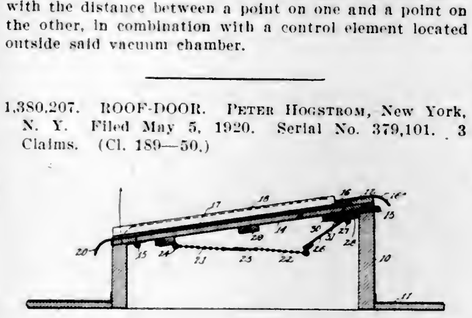
from said pump forming the shaft by which the cutter head is revolved and having its suction end opening well down between the arms of the cutter head.

1,380,204. STRAP-LOCK FOR CONTAINERS. ROBERT C. GRIFFITH, Baltimore, Md. Filed Feb. 21, 1921. Serial No. 446,604. 7 Claims. (Cl. 24—23.)



5. The combination with binding straps arranged in intersecting planes of a locking disk having radial series of inner and outer parallel slots through which the strap ends may be threaded, the extremities of the straps being crimped or folded outward to form loops to engage the edges of the inner slots, the portions or sections of the disk between the outer slots and the periphery of the disk being depressed.

1,380,205. AUTOMOBILE-PULL-OUT MECHANISM. CHARLES G. HALVORSON, Brandt, S. D. Filed Oct. 12, 1920. Serial No. 416,454. 2 Claims. (Cl. 254—166.)

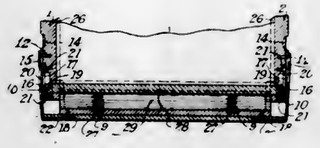


1. A pull-out mechanism for automobiles having a block and fall including a cable and guiding pulleys, means for connecting one of said pulleys to the front axle of a vehicle, means carried by the vehicle for reeling the free end of the cable, and an anchoring device for connection with the other pulley of the block and fall, and consisting of an anchor stake and a supplemental bracing stake connected with the anchor stake, said stakes being provided with foot rests to facilitate the embedding of the lower extremities thereof in the road bed.

1,380,206. VACUUM-VALVE DETECTOR. ROY ALEXANDER WEAGANT, Roselle township, Union county, N. J., assignor, by mesne assignments, to Radio Corporation of America, a Corporation of Delaware. Filed Mar. 10, 1917. Serial No. 153,935. 6 Claims. (Cl. 250—27.)

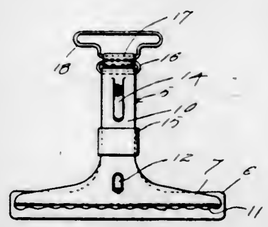
1. In a device of the kind described, a vacuum chamber, two electrodes sealed in said chamber, means for heating one of said electrodes, the said electrodes being spaced from each other and so arranged that the mean distance between said electrodes is relatively great as compared with the distance between a point on one and a point on the other, in combination with a control element located outside said vacuum chamber.

1,380,207. ROOF-DOOR. PETER HOGSTROM, New York, N. Y. Filed May 5, 1920. Serial No. 379,101. 3 Claims. (Cl. 189—50.)



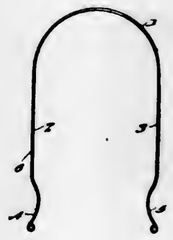
3. A roof door structure including a frame, means to hinge said frame to swing outwardly, a door hinged in said frame to swing inwardly independent of the frame and adapted to swing outwardly with said frame, and means subject to a predetermined heat and serving to restrain said inwardly swinging door against opening movement.

1,380,208. HUMIDIFIER. LEO G. HOLTSCHNEIDER, Jefferson City, Mo. Filed Sept. 30, 1919. Serial No. 327,378. 1 Claim. (Cl. 131—30.)



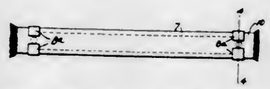
A humidifier comprising two circular casing sections fitting one upon the other, an external annular shoulder adjacent the end of the inner casing section receiving thereagainst the open end of the outer casing section, an internal annular shoulder in the outer casing section receiving thereagainst the open end of the inner casing section, each of said sections having a closed end and an open end, said closed ends tapering from said shoulders, and said sections having perforations therein adapted to be moved in or out of registration by the rotary or longitudinal movement of said sections.

1,380,209. PHOTOGRAPHIC-PLATE HOLDER. CHARLES E. HUTCHINGS, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Sept. 11, 1919. Serial No. 323,184. 12 Claims. (Cl. 95—66.)



1. In a plate holder the combination with a frame for holding photographically sensitive material, dark slides insertible into the frame to protect the sensitive material from light, of a spring actuated door attached to the frame, the door being movable into an open and a closed position, and latches for holding the door against the spring pressure.

1,380,210. TROUSERS-SUPPORTING DEVICE. AMOS H JAMES, St. Louis, Mo. Filed Oct. 24, 1917. Serial No 198,207. 2 Claims. (Cl. 24—260.)

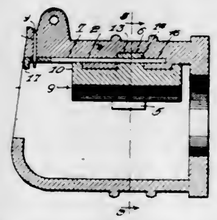


1. A supporting device having clasp arms, a spring engaging one of the arms to urge them into separated relation at the clasping ends, a means acting counter to the spring to move said arms into clasp relation, said spring being compressible to permit passage of the said means over it, and said spring extending into the path of movement of the means so as to prevent accidental return movement thereof after passage over said spring.

1,380,211. COW-TAIL HOLDER. ORLANDO B. JOHNSON, French, Idaho, assignor of one-half to R. M. McCracken, Boise, Idaho. Filed Jan. 26, 1921. Serial No. 440,109. 5 Claims. (Cl. 119—105.)

1. A cow-tail holder consisting of a leaf spring member of U-shaped form having outwardly disposed curve formations at the ends thereof.

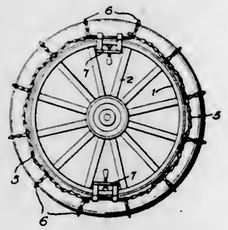
1,380,212. SAFETY-WATCH-POCKET PROTECTOR. LEOPOLD JURGIELEWICZ, Los Angeles, Calif. Filed May 15, 1919. Serial No. 297,320. 3 Claims. (Cl. 2—151.)



1. A device of the character described, comprising a spring strip having laterally projecting members, and a piece of fabric folded upon the strip and upon which piece of fabric the lateral members of the strip are bent to secure it to said strip.

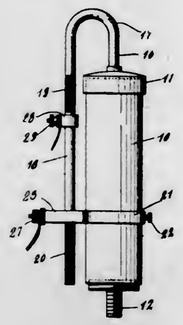
1,380,213. UMBRELLA-HANDLE. RALPH KAMENETZKY, Brooklyn, N. Y. Filed Mar. 16, 1920. Serial No. 366,232. 2 Claims. (Cl. 135—47.)

2. A device of the character described comprising a tubular member having an open end, a looped flexible member adapted to be carried within the tubular member and extended from the open end thereof, an operating knob carried by one end of said looped flexible member, resilient means secured at one of its ends to the looped flexible member and at its other end to the tubular member, said resilient means serving to maintain the looped flexible member within the tubular member, and means carried by the tubular member and comprising a resilient pivoted lever, the free end of which is adapted for engagement with the flexible looped member to maintain the same in extended position without the tubular member.



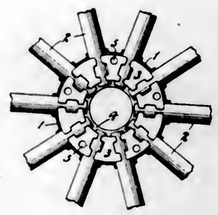
1,380,214. JOURNAL-BOX. JOSEPH P. KELLY, Belington, W. Va. Filed June 19, 1920. Serial No. 390,157. 2 Claims. (Cl. 64—20.)

2. A journal box and a bearing brass therefor, said journal box having its top integrally formed with a bearing surface for the bearing brass, said surface including



an upper straight portion, angle depending sides therefor, and lugs centrally depending from the sides, the top of the said surface having a rectangular opening providing a pocket, the bearing box having a longitudinal passage entering said pocket, a bearing brass having its lower edges flanged and the said flanges notched to engage with the mentioned lugs, flanges on the ends of the bearing brass to contact with the ends of the bearing member in the top of the journal box, said bearing brass having its top portion formed with a rectangular lug that has an opening therethrough which registers with the passage in the journal box, a key movable through the passage, entering the pocket and passing through the lug on the bearing box, and removable means, adjacent to the outer end of the bearing box, engaging with the key for locking the key to the box.

1,380,215. TIRE-CHAIN. ROY J. KLEINECK, Oxford Junction, Iowa. Filed Jan. 12, 1921. Serial No. 436,762. 2 Claims. (Cl. 152—14.)



1. An anti-skid chain for tires comprising a plurality of sections adapted to be removably connected and completely encircle a tire, rods, hooks on the ends of the rods removably engaging the ends of the sections, devices engageable with the rods and adapted to straddle a wheel felly and means for actuating said last-mentioned devices to tighten the chain.

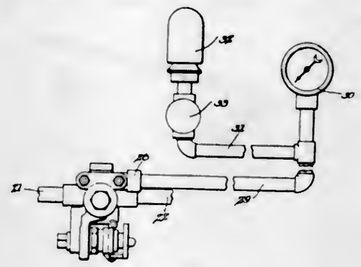
1,380,216. CIRCUIT-BREAKER. PHILIP FREEMAN KITTOE, Galena, Ill. Filed Aug. 3, 1920. Serial No. 400,968. 2 Claims. (Cl. 200—82.)

1. A circuit breaker comprising a cylinder, a spring actuated piston therein, an adjustable contact member carried by the cylinder, a movable contact member carried by the piston and normally contacting with the adjustable contact member, said movable contact member including spaced parallel arms connected at one end and means whereby pressure may be applied to the piston to move the latter against the action of the spring to separate the contact members.

1,380,217. METAL WHEEL. LAURENCE S. LACHMAN, New York, N. Y., assignor, by mesne assignments, to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed June 3, 1919. Serial No. 301,455. 9 Claims. (Cl. 301—80.)

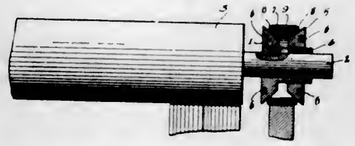
1. In a metallic wheel, a metal hub shell perforated to form sockets for the reception of metallic spokes and fastening plates welded to the converging spoke ends within said hub and in the spaces between said converging ends.

1,380,218. METAL WHEEL. MAURICE LACHMAN, New York, N. Y., assignor, by mesne assignments, to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed Aug. 23, 1919. Serial No. 319,310. 8 Claims. (Cl. 301—64.)



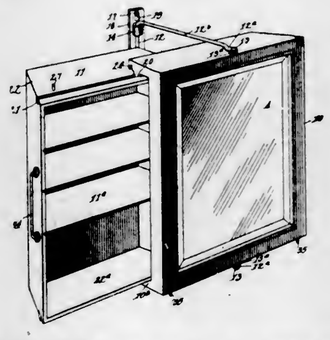
1. A metal wheel having a continuous hub portion and spokes integral therewith, said hub portion comprising one head of an I bar and said spokes being formed of the web and opposite head of the bar.

1,380,219. METAL WHEEL. MAURICE LACHMAN, New York, N. Y., assignor, by mesne assignments, to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed Aug. 26, 1919. Serial No. 319,985. 5 Claims. (Cl. 301—64.)



1. A metal wheel formed of a section of flanged metal bar having both edges flanged, one edge having a T head constituting a continuous rim of the wheel while the spokes are integral with said head and consist of the subdivided web and opposite flanged edge of said bar.

1,380,220. SIGNAL ATTACHMENT FOR AIR-BRAKE FEED-VALVES. EDGAR V. LAMBETH, Hot Springs, Ark. Filed Dec. 28, 1920. Serial No. 433,618. 1 Claim. (Cl. 116—55.)

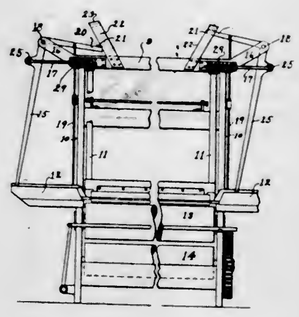


In an air brake system, the combination with a feed valve, its bracket, and the filler block disposed between the valve and the bracket; of signaling means including a member interposed between the valve and said filler member and formed with a socket at one end, a pipe connected with said socket and carrying a pressure gage and a whistle located at a remote point with respect to the valve, said member being formed with a passage leading into said socket and leading out through a port, and a valve being formed with a passage communicating at one end with said port and leading at its other end into the port formed in the wall of the valve piston chamber, the last named port being covered and uncovered by the piston in its movement.

1,380,221. INKING-ROLL TRUCK. HERBERT G. LA SOR, Los Angeles, Calif. Filed July 21, 1919. Serial No. 312,317. 7 Claims. (Cl. 101—348.)

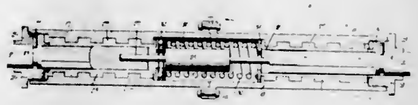
1. A truck for inking rolls comprising a cone member having a screw-threaded hub, an opposing cone member screw-threaded for adjustment upon said hub, a split inherently contractile ring supported upon the peripheral cone surfaces of the cone members, and an expansible tire embracing the split ring.

1,380,222. COMBINED SHAVING MIRROR AND CABINET. CHARLES LICHTENBERG, Brooklyn, N. Y. Filed May 3, 1920. Serial No. 378,579. 2 Claims. (Cl. 45—135.)



1. An article of the class described including a supporting element, a structure mounted in said supporting element to turn therein about a vertical axis, said structure presenting rearwardly extending top and bottom flanges, a cabinet on said structure at the back between said flanges, means for slidably engaging the cabinet with said flanges for projecting the cabinet beyond either side of said structure, said flanges and said cabinet presenting respectively blind guide grooves, and stop pins movable in said grooves to limit the movement of the cabinet in either direction.

1,380,223. METHOD OF PRODUCING CYANAMID FROM CALCIUM CYANAMID. JOHAN HJALMAR LIDHOLM, Wargön, Sweden. Filed June 12, 1920. Serial No. 388,677. 5 Claims. (Cl. 23—21.)



1. Method of producing cyanamid practically free from dicyandiamid, consisting in gradually supplying calcium cyanamid to a water solution and precipitating the calcium by means of carbon dioxid.

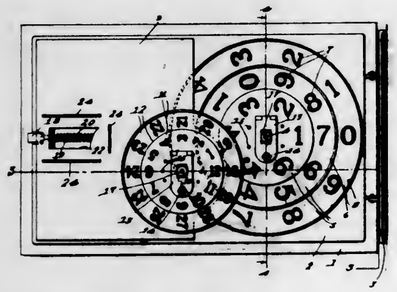
1,380,224. SHUTTLE-THROWING DEVICE. HAMILTON LINDSAY, Cleveland, Ohio, assignor to The Lindsay Wire Weaving Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 14, 1920. Serial No. 396,328. 10 Claims. (Cl. 139—48.)

4. In a loom, the combination with a batten frame, of a picker arm pivoted overhead thereto, a pair of springs carried by the frame, and links connecting the springs to the picker arm at a point below the pivoted connection therefor.

1,380,225. TORSIONAL EQUALIZER. HARRY G. LORD, Collinswood, N. J. Filed Feb. 17, 1919. Serial No. 277,439. 12 Claims. (Cl. 64—96.)

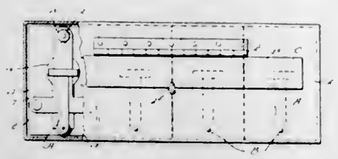
11. The combination in a torsional equalizer of a sleeve having two sets of oppositely formed threads; heads formed to coöperate with the threads of the sleeve; shaft sections respectively connected to said heads; a spring mounted between the heads to resist certain movements thereof relatively to the sleeve; and an anti-friction bearing mounted between one of the heads and said spring.

1,380,226. BUTTON-KNIFE. JOHN M. MCCRAY, Pueblo, Colo. Filed Oct. 19, 1920. Serial No. 417,958. 1 Claim. (Cl. 218—27.)



A device for removing buttons from shoes or fabrics, the same comprising a tubular cylindrical member having

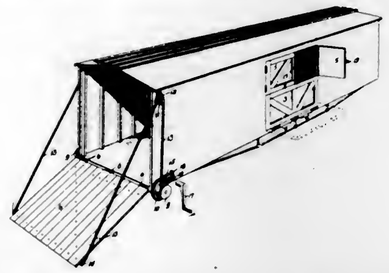
one side cut away to form a semi-tubular projection, said projection being provided with an elongated longitudinally



extending slot having an opening at one side, and a cutter blade at the opposite side of the slot.

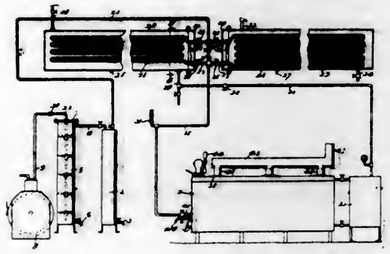
1,380,227. INDICATOR. BARTON F. MCGLOTHLEN, San Bernardino, Calif. Filed Aug. 16, 1919. Serial No. 317,994. 2 Claims. (Cl. 40—70.)

2. In an indicator, a base, a cover, means to secure the cover in closed position, a threaded post on the base and within the cover, dials mounted to be turned about the base and having apertures off their common center and adapted to be placed in registration, a plate mounted on the post, a nut on the post and against said plate, and a plate hinged to the first-named plate and having an opening to receive said nut and also having a pin to enter the registered apertures in the dials.



1,380,228. TESTING DEVICE FOR IGNITION SYSTEMS. HUGH F. MAGUIRE, New York, N. Y. Filed Dec. 16, 1919. Serial No. 345,290. 4 Claims. (Cl. 175—183.)

1. In a coil box, the combination of means carried thereby adapted to normally assume an inactive position and capable of engagement with the vibrator of the coil to render the same inactive, said means being arranged in a coil box to coincide with the position of the coil or coils contained therein, and in which the coil box is provided with a cover adapted to assume a normally closed position but capable of being opened to expose said means.

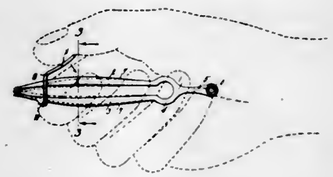


1,380,229. FREIGHT-CAR DOOR. LYNDON WHITE MANHEIM, Camden, S. C. Filed Aug. 24, 1920. Serial No. 405,596. 2 Claims. (Cl. 20—21.)

1. In a freight car, a door forming the end wall of the freight car and hinged at its lower edge to the floor of the car, a shaft mounted transversely of the car and below the same, winding drums on the ends of the shaft fixed to turn therewith, outwardly presented angle brackets affixed to opposite sides of the car adjacent the upper end of the door, laterally extending studs on the upper

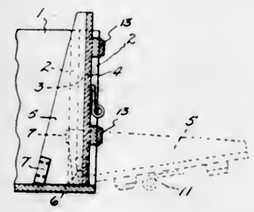
end of the door, pulleys mounted in the angle brackets, flexible devices having their intermediate portions located over the pulleys and their ends operatively connected to the studs and the winding drums, and means for driving the shaft.

1,380,230. APPARATUS FOR THE TREATMENT OF MILK. JOHN M. MANLEY, Montgomery, Ala. Filed Apr. 24, 1920. Serial No. 376,223. 4 Claims. (Cl. 257—9.)



3. Apparatus for the purpose indicated comprising a compressed air supply means, a pair of jacketed coils for contact respectively with heating and cooling media, a pasteurizer, connections between the supply means and the coils and the coils and the pasteurizer, and means for selectively passing air through one or the other of the coils or the two coils in common to obtain a prescribed temperature of air.

1,380,231. FOUNTAIN-PEN. KEN MATSUMOTO and KISABURO TAKAGI, Tokyo, Japan. Filed July 7, 1920. Serial No. 394,468. 2 Claims. (Cl. 120—49.)

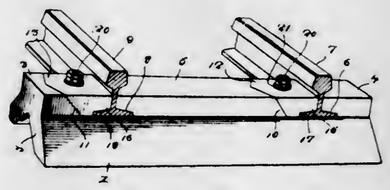


1. A fountain pen including a barrel provided at its open end with external screw threads, a pen holder in threaded engagement with the open end of said barrel, and provided with an internal thread, a cap provided near its closed end with internal screw threads designed to engage the external threads at the open end of the barrel, and a stem carried by the cap and provided at its free end with external threads designed to engage the internal threads of the pen holder for attaching and detaching said pen holder to and from the barrel, said cap being designed to close the open end of said barrel when the internal threads of the cap are in tight engagement with the external threads of the barrel, said cap being provided with a side opening through its wall to permit the barrel to be filled with ink after the stem has detached the pen-holder from the barrel.

1,380,232. TWEEZERS. ERNEST HENRY METCALF, Marlboro, N. H. Filed June 22, 1920. Serial No. 390,880. 5 Claims. (Cl. 294—35.)

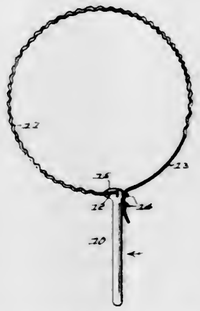
1. A tweezer, comprising a pair of integral jaws spaced apart, one of said jaws having a shoulder thereon, and a lever having a slot therein receiving the pair of jaws and located back of and fulcruming against said shoulder.

1,380,233. SCOOP-BOARD FOR WAGON-BODIES. LEO H. MEYERPETER, St. Thomas, Mo. Filed June 5, 1920. Serial No. 386,697. 1 Claim. (Cl. 296—54.)



The combination with a wagon body open at its rear end and having at the inner sides of its side walls spaced upright strips, of a scoop-board movably arranged between the side walls of the body and having side walls and exterior projections on said side walls and disposed and movable in the spaces between the strips of the body and also having recesses in the outer sides of the side walls, wooden cleats fixed to the outer side of the scoop-board and arranged transversely thereof, metallic straps fixed to said cleats and having angularly disposed flared end arms adapted when the scoop-board is closed to assume positions at the outer sides of the rear end portions of the side walls of the body, outwardly directed arms at the inner ends of the side walls of the scoop-board and adapted to bring up against the inner edges of the innermost strips when the scoop-board is opened, and latch levers journaled in the scoop-board in a horizontal plane above said projections and having locking arms adapted to enter the spaces between the strips and the recesses in the scoop-board alternately and also having gravitational handle arms disposed and movable at the outer side of the scoop-board.

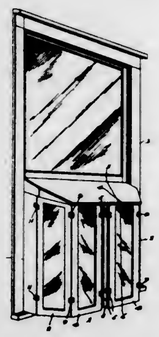
1,380,234. IRONING-BOARD. ABRAHAM MINTZ, New York, N. Y. Filed June 23, 1920. Serial No. 391,090. 1 Claim. (Cl. 68—10.)



In a device of the character described, a base provided with a vertically-extending passage having a cut-out portion intermediate of its ends, an ironing board pivotally mounted on the base, a screw-threaded member carried by the ironing board and projecting through said vertical passage, a nut carried by the screw-threaded member and adapted to engage the base to secure the board against movement relative to the base, and a coil spring surrounding said screw-threaded member and interposed between the nut and a portion of the base.

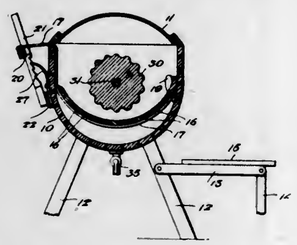
1,380,235. TIE. JOHN C. MOELL, Wapakoneta, Ohio. Filed Jan. 11, 1921. Serial No. 436,452. 1 Claim. (Cl. 238—59.)

A rail tie comprising a body whose base is V-shaped in cross section and whose top is formed with upstanding ends and an upstanding block between the ends, and the lower wall between the upstanding portions providing rail seats, one of the said ends having its inner face notched to receive the base of one of the rails, the central block having one of its ends notched to receive the base of the second rail, the opposite face of the block having a V-shaped downwardly inclined groove, the inner face of the second end having a V-shaped downwardly inclined groove, wedge blocks each having one face provided with a V-shaped tongue complementary with the V-shaped grooves and designed to be received in the respective grooves, and to have their straight faces contacting with the rails, and removable means for securing said wedge blocks on the tie.



1,380,236. ADJUSTABLE JAR OR CAN OPENER. DENIS L. MURPHY, Hyannis, Mass. Filed Mar. 1, 1920. Serial No. 362,287. 1 Claim. (Cl. 81—3.1.)

A jar cap clamp having a lever or handle provided at its inner end with an enlarged rocker head for bearing

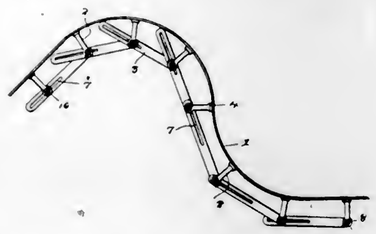


contact with the jar cap, a transversely corrugated spring band or ribbon secured at one end to the head and provided at the other end with a longitudinal series of openings, and a plurality of hooks carried by the lever or handle adjacent to the head for engagement with said openings to vary the diameter of the cap-engaging loop.

1,380,237. WINDOW ATTACHMENT. OSWALD J. NEFF, Easton, Pa. Filed June 11, 1920. Serial No. 388,269. 1 Claim. (Cl. 20—40.)

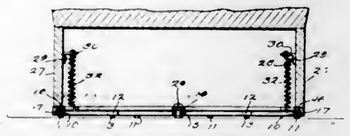
A collapsible and removable bay window attachment for window casings, comprising a plurality of hingedly connected transparent panels, a channeled mullion between the front panels to which the said front panels are hinged, the channel of the said mullion being designed to receive therein the edges of the outer panels when the latter are folded upon the front panels and the front panels are folded against the sides of the mullion, cleats on the inner face of the panels adjacent to the lower edges thereof, a bottom secured to the cleats, a top having depending spaced cleats receiving therebetween the upper edges of the panels, securing means for the top, and weather excluding strips at the confronting hinged ends of the panels.

1,380,238. WASHING-MACHINE. MARY J. NEWMAN, Fort Smith, Ark. Filed June 1, 1920. Serial No. 385,682. 1 Claim. (Cl. 68—23.)



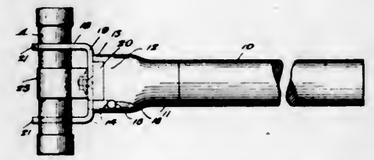
A washing machine comprising a receptacle, an agitating element rotatably mounted within the receptacle, means for operating said element, a flexible bottom arranged beneath said element and having one end pivotally mounted upon the receptacle, the opposite end of said bottom being free, flexible elements secured to the free end of the bottom and passed over the upper edge of the receptacle, a vertically disposed lever pivoted upon the outside of the receptacle, a cross arm carried by the lever and connected with the terminals of the flexible elements, arms depending from the lever and hingedly connected with the receptacle at their lower ends, said arms and lever being movable as a unit to adjust the bottom with respect to the agitating element, said lever having teeth, and a resilien element carried by the receptacle and coöperating with said teeth to hold the bottom in an adjusted position.

1,380,239. AUTOMOBILE-BUMPER. RICHARD T. NEWTON, New York, N. Y. Filed Jan. 22, 1917. Serial No. 143,815. 36 Claims. (Cl. 293—55.)



9. An automobile bumper comprising an impact member of spring strap material, having supporting arms extending on a curve from the ends of the impact member to the chassis, and a reinforcing spring arch lying between the impact member and the chassis and serving to support the mid-area of the impact member, the attaching ends of said impact member and supporting arch lying substantially parallel to each other, and to the opposite chassis side bars, together with means common to the attaching ends for opposite sides of the bumper for securing the same respectively to the opposite chassis side bars.

1,380,240. TEMPLET. GERSHOM JNO. NIES, Beaumont, Tex. Filed June 8, 1920. Serial No. 387,446. 2 Claims. (Cl. 33—177.)

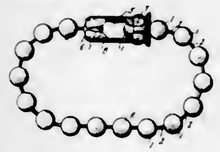


1. A device of the class described comprising a flexible base strip, standards carried thereby and spaced apart, links, each pivotally connected with one standard and having a slotted connection with the adjacent standard and means for clamping the slotted ends of the links to the standards.

1,380,241. ROCKING-CHAIR. JOHN A. OLSON, Paterson, N. J., assignor to Auto Safety Device Company, Union, N. J., a Corporation of New Jersey. Filed Oct. 28, 1919. Serial No. 334,064. Renewed Nov. 3, 1920. Serial No. 421,597. 1 Claim. (Cl. 155—71.)

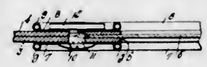
A revolving rocking chair comprising a lower annular plate, a plurality of integral arms secured to said plate, extending radially inwardly therefrom, joined at the center of the plate and provided at said center with an opening, an upper annular plate right angular in cross section, one leg of the angle being horizontal and adapted to contact the upper face of the lower annular plate, the other leg of the angle being vertical and adapted to contact the outer face of the lower annular plate, a plurality of integral arms connected with said upper plate, extending radially inwardly therefrom, joined at the center of the plate and provided at such center with an opening, means extending through said openings for rotatably connecting said plates, a rocking chair having its rockers in engagement with the upper surface of the upper plate and adapted to rock thereon, pairs of springs secured to substantially diametrical portions of the upper plate and connecting said plate with said chair, and a plurality of braces extending from the center of the radially disposed arms connected to the upper plate and secured to said upper plate at points between and spaced from the outer ends of one of the upper radial arms and the portions of the upper plate to which the said pairs of springs are secured.

1,380,242. FUSE-HOLDER. PAUL R. OLIVER, Akron, Ohio. Filed Apr. 5, 1920. Serial No. 371,539. 5 Claims. (Cl. 81—1.)



1. A device of the character described comprising a handle, a head carried thereby and including spaced ears provided with openings extending to one edge, said opening being arranged reversely, and a clip rotatably mounted upon the head between said ears.

1,380,243. COMBINATION PLUMB-LEVEL. JAMES H. OSBORN, Mount Vernon, Ill. Filed Jan. 23, 1920. Serial No. 353,424. 4 Claims. (Cl. 33—216.)



1. A device of the class described comprising a casing having an elongated slot therein, a plumb carrying instrument pivoted to said casing so as to be received in said slot, said instrument comprising a pair of parallel spaced apart arms, a bracket situated upon the top of one of said arms, a plumb line attached to said bracket, a bob attached to said plumb line, a pair of spaced apart parallel plates extending between said arms and provided with registering slots adapted to receive said plumb line.

1,380,244. KEY-RING CHAIN. CHARLES H. OTIS, Orange, Conn. Filed July 22, 1920. Serial No. 398,104. 4 Claims. (Cl. 24—116.)

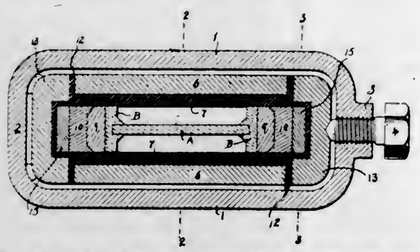
4. A key ring chain, comprising a series of spherical balls or beads, links of relatively small diameter connecting the balls or beads, a coupling sleeve having an opening or entrance intermediate its ends and adapted to permanently hold the end ball in one end of the sleeve, said sleeve at its other end having a longitudinal slot of a width sufficient to accommodate a link, a thimble mounted in the slotted end of the sleeve and having a slot therein adapted to register with the first-mentioned slot, and an enlargement on the outer end of the thimble.

1,380,245. CURTAIN-WINDOW. CHARLES B. PECK, Batavia, N. Y. Filed July 2, 1920. Serial No. 393,592. 1 Claim. (Cl. 296—145.)

The combination with a flexible support having an opening therein and a sheet of glass in the opening, of a frame located on each side of the sheet, means connecting the frames to clamp the glass and the support between them, each frame comprising a plurality of independent flat straight strips of light thin metal removably joined together to form a rigid frame, each strip being provided with outwardly presented beaded edges, said connecting means comprise bolts and nuts, and said beaded edges preventing accidental turning of the nuts.

1,380,246. TOOTHBRUSH-CONTAINER. EDWARD M. PETERS, Medford, and PAUL VILARDO, Somerville, Mass. Filed July 2, 1920. Serial No. 393,501. 8 Claims. (Cl. 132—84.)

8. A device of the character described comprising a tubular holder, a slide within the holder, claws carried by the slide for receiving the handle of a tooth brush, means coöperating with one claw for holding the tooth brush handle therein and also adapted to cause movement of the slide, resilient means associated with the other claw for holding the handle therein, removable caps for the ends of the tube, a receptacle for tooth paste and the like carried within one cap, and means to expel the contents of the receptacle also carried by said cap.

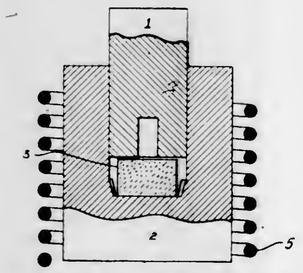


1,380,247. SHELL-FISH SCRAPER. CHARLES S. PRICE, Denver, Colo. Filed June 2, 1920. Serial No. 386,021. 2 Claims. (Cl. 30—22.)

1. In a device of the character stated, a handle, a body portion of compound curvature longitudinally, and of substantially the same width throughout, the free end of said

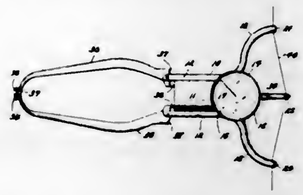
body portion located transversely to the plane of the handle and terminating in a sharp scraping edge located transversely of the longitudinal axis of the handle.

1,380,248. ELECTRIC FURNACE. CHARLES H. PRIESTLEY, Elizabeth, N. J. Filed Apr. 24, 1919. Serial No. 292,329. 3 Claims. (Cl. 204—64.)



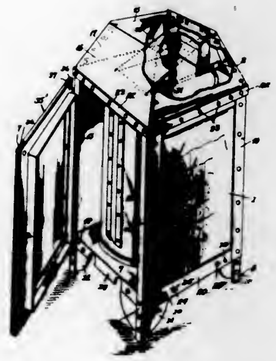
1. An electric furnace, comprising in combination; a retaining frame, a clamping cap screw screw-threaded within the retaining frame, a furnace cylinder, an insulating tube inserted within the furnace cylinder to line said cylinder, a grooved closure head, insulator caps placed upon each end of the furnace cylinder and against the insulator cap with the cap confined within the groove of the closure head, and circuit electrodes inserted within the groove of the insulator cap and passed across the bore of the furnace cylinder.

1,380,249. SHEARING-MACHINE. MARTIN O. REHFUSS, Philadelphia, Pa., assignor to John Wanamaker, Philadelphia, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 5, 1917. Serial No. 205,517. 13 Claims. (Cl. 164—42.)



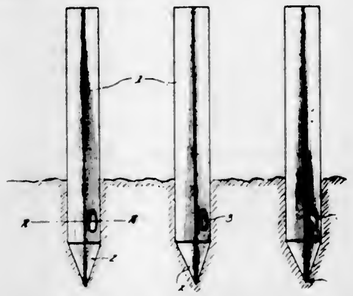
1. The combination in a shearing machine of means for supporting a body of sheet material in a plane; a guide; a pair of scissors bodily movable on said guide and including a fixed blade operative immediately adjacent the plane in which the material is supported; and means for continuously oscillating the second blade of said scissors while the latter is moving in one direction on the guide, consisting of a rotary shaft, and mechanism operatively connecting said shaft with the second scissors blade.

1,380,250. PROCESS OF MOLDING OR SHAPING PARTS IN MOLDS OR DIES. MARTIN H. REYMOND, Anderson, Ind. Filed Oct. 22, 1919. Serial No. 332,498. 3 Claims. (Cl. 219—13.)



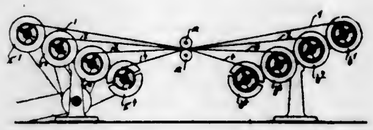
1. The process of molding material in a closed die, consisting of electrically heating the material in a coreless high frequency primary transformer by the transformer reaction between said high frequency primary and the material to be molded, and the shaping of said heated material in a closed die under pressure.

1,380,251. TENSIOMETER. PAUL RIBA, Philadelphia, Pa. Filed May 7, 1920. Serial No. 379,602. 2 Claims. (Cl. 265—1.)



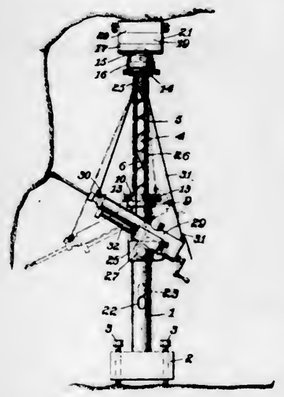
1. A tensiometer comprising a frame including wire engaging arms and a casing carried thereby, an indicating dial on the casing, a centrally disposed wire engaging plunger passing through the casing, a seat carried by the plunger, a spring disposed in the casing and bearing against the seat, a sliding block in the casing and engaged by the spring, handles mounted to swing on the frame, off-set projections on the handles for engagement with the block to advance the same in the casing when the handles are actuated and means for locking said handles against relative movement.

1,380,252. COMBINED TRASH-RECEPTACLE AND ADVERTISING MEDIUM. GEORGE J. RICHARDSON, New York, N. Y., assignor to National Sanitary Street System, Incorporated, a Corporation of Delaware. Filed Nov. 26, 1919. Serial No. 340,730. 4 Claims. (Cl. 220—83.)



1. A combined trash receptacle and advertising carrier, comprising a receptacle having metallic walls, connecting strips secured thereto on the outer sides of such walls to connect the walls in receptacle forming relation, and brace strips overlying the connecting strips and secured to the latter and to the walls, said brace strips extending inwardly of the edges of the connecting strips to provide with the underlying wall opposing guideways for the reception of advertising panels, each wall of the receptacle having an upper end brace strip to limit movement of the panel, and the panels having a lower end brace strip, the end brace strips of the receptacle wall and panel providing cross continuations of the guideway forming brace strips to complete the panel effect when the advertising panel is in place, and means for securing the panel to the receptacle wall.

1,380,253. GERMINATOR. JAMES G. RODGER, Camden, N. J. Filed Feb. 28, 1921. Serial No. 448,321. 2 Claims. (Cl. 47—36.)

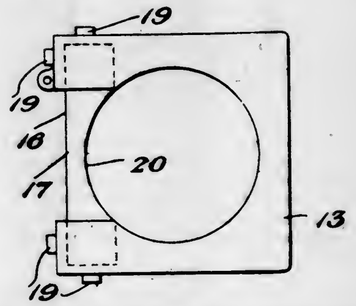


2. A germinator for use as an educational appliance, comprising a rod-like member having a pointed end and formed with a bowl-like recess near the pointed end, the length of the rod above the recess serving as a handle to permit the introduction of the germinator into and its withdrawal from the ground.

1,380,254. METHOD OF ROLLING IRON. CHRISTIAN RÖTZEL, Dusseldorf, Germany. Filed June 6, 1919. Serial No. 302,363. 1 Claim. (Cl. 29—18.)

An improved method of rolling hoop or ribbon iron, which consists in passing a plurality of separated blooms or bars in a cold state, laid one over another, at one time through a pair of rollers and repeating said passage in a cold state as often as required to bring the upper and lower surface of each hoop at least once into immediate contact with one of the rollers of the pair, and changing the surfaces at each passage.

4,380,255. DRILL-COLUMN. RAY P. SAFFOLD, Warren, Ariz. Filed Mar. 29, 1919. Serial No. 286,075. 12 Claims. (Cl. 255—52.)



1. A drill column comprising two telescoping members, one of said members having a threaded connection with the other, the externally threaded member having a second reverse thread; and a stop collar having a spline adapted to enter said reversely formed thread and to bear against the adjacent end of the other member.

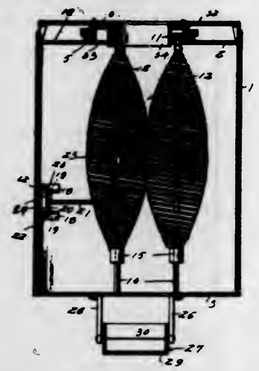
6. In a drill column, the combination of a base, an extension member carried thereby; a ball rotatably mounted on the upper end of said member; and a separate bearing block having a socket in which the ball seats.

10. In combination with a drill column; a drilling machine; a supporting bar for said machine, said bar being slidably supported upon the column; a pulley block attached to the upper portion of the column; and a rope or cable having its ends secured to the opposite ends of the drilling machine, said rope passing through the block and having a bight or loop passing downwardly and embracing the supporting bar.

1,380,256. JOURNAL-BOX. HENRY C. SALTIEL, Rawlins, Wyo. Filed Mar. 1, 1920. Serial No. 362,341. 1 Claim. (Cl. 64—24.)

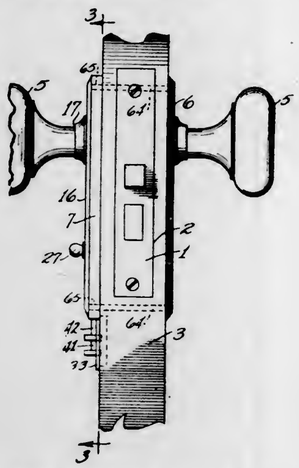
In combination, an oil box having one side formed with an opening, means for closing the opening, a stub axle extending from the wheel and disposed within said box, the opening in said box being of a size to permit passage of said stub axle, a journal bearing surrounding said stub axle, a wedge member disposed at the top of the box and engaging the top of said journal, and means for retaining the stub and journal within the box comprising an insert located within the open end of the box and having one face concaved for conforming engagement with the journal, said insert having right angularly extending ends bearing against the underside of the top and the top side of the bottom of the box and being bolted to the latter.

1,380,257. COAT-COLLAR FASTENER. GUIDO F. SCHLOTE, Afton, Wyo. Filed Dec. 7, 1918. Serial No. 265,730. 1 Claim. (Cl. 24—73.)



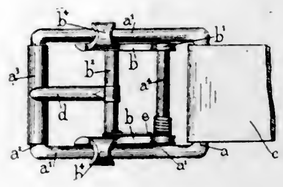
A device for the purpose indicated embodying an elastic strip, a head member carried by the strip adjacent one end, a socket member carried by the strip adjacent the other end, and attaching hooks having their shanks formed in rings embracing respectively the head and socket members on the peripheries of the latter, the hook portions lying in planes at right angles to the plane of the strip, the head member and socket member being engageable, whereby the hooks become oppositely disposed, so that if separately engaged with a garment or piece of goods they will become locked in such engagement upon the connection of the head and socket members.

1,380,258. CELLULOSE-NITRATE COMPOSITION AND SHEET. PAUL C. SEEL, HENRY COMBS, and RICHARD KEMP, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed May 10, 1920. Serial No. 380,411. 5 Claims. (Cl. 106—37.)



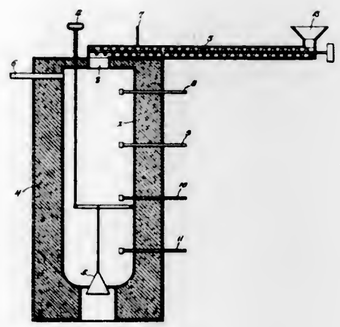
1. A composition consisting only of nitrocellulose, aliphatic alcohols containing from 4 to 5 carbon atoms, and a volatile common solvent, the boiling point of which is substantially below 100° C.

1,380,259. POTATO-PEELING MACHINE. BARNEY A. SHARP, Los Angeles, Calif. Filed July 23, 1920. Serial No. 398,369. 13 Claims. (Cl. 146—14.)



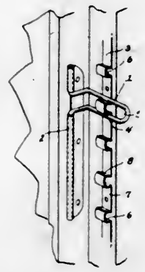
1. A potato peeling machine comprising a casing having inlet and outlet ports, potato feeding elements journaled in said casing between the ports and adapted to impart rotation to a potato during its passage from one port to the other, and a knife for removing the peelings from the potatoes as they are fed in the direction of the outlet port.

1,380,260. COMBINATION KEYHOLE-GUARD. JOSEPH SOMORA, Chicago, Ill. Filed Dec. 20, 1920. Serial No. 431,982. 3 Claims. (Cl. 70—66.)



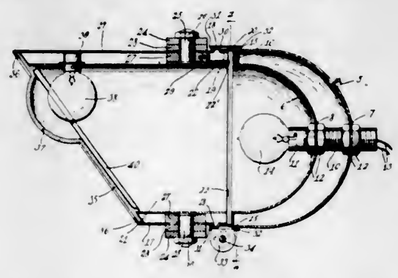
1. In a device of the class described, the combination of a door lock, a casing secured to said door lock, said casing being formed with a key-hole registering with the keyhole of said lock, transverse guide members secured to the inner side of said casing at opposite sides of said key-hole to provide a guide-way, a shutter slidable in said guide-way and being formed with a key-hole positioned to register with the key-hole in said casing when said shutter is in an adjusted position relative the casing, a plurality of spaced apart alined detents carried by said shutter and extending laterally thereof, a carrying plate secured in adjusted position between said casing and said lock, said carrying plate being provided with a pair of spaced apart parallel ways in its surface contiguous said shutter and with another way extending at right angles to said first named ways and being positioned to receive said detents, and a pair of locking bolts each having a series of characters marked thereon, said locking bolts being slidably disposed in said first named ways, each bolt being formed with a transverse slot in the surface thereof contiguous the shutter in position to register with said last named way when said locking belts are in adjusted positions, whereby said detents are moved along said last named way when said shutter is moved to bring the key-hole through the shutter into or out of registration with said first named key-hole.

1,380,261. BUCKLE FOR STRAPS, BELTS, AND THE LIKE. GABRIEL ALBERT VALENTIN SOULACROIX, Paris, France. Filed Aug. 7, 1918. Serial No. 248,783. 1 Claim. (Cl. 24—179.)



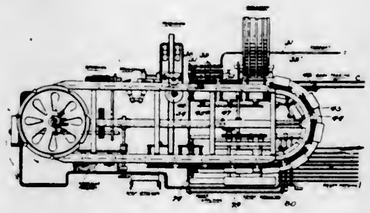
A buckle comprising a frame having longitudinally spaced cross bars, to one of which a strap end is adapted to be permanently secured, and beneath the other of which the free end of the strap is adapted to be passed up between the sides of the frame, a chassis pivoted to said frame at a point located between said cross bars, a tongue on said chassis adapted to pass through said free end of the strap and to overlie the cross bar beneath which the free end of the strap is passed, in combination with spring means engaging said chassis and tending to maintain the tongue in position to overlie said cross bar in strap-engaging position, substantially as described.

1,380,262. DESTRUCTIVE-DISTILLATION PROCESS. ORIN F. STAFFORD, Eugene, Oreg. Filed Aug. 29, 1919. Serial No. 321,298. 19 Claims. (Cl. 203—6.)



2. In the destructive distillation of wood, the step of heating the wood under treatment while out of contact with substantial amounts of air, said heating operation being effected, after the commencement of the operation, substantially by the heat produced in the exothermic wood carbonizing reaction, while continuously supplying wood to be treated.

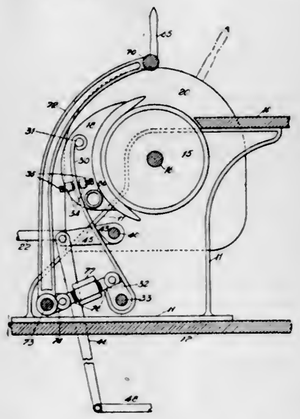
1,380,263. WINDOW-LOCK. GEORGE W. STEIN, Chicago, Ill. Filed Nov. 15, 1919. Serial No. 338,242. 2 Claims. (Cl. 292—194.)



1. A window locking device comprising a locking member secured to the window sash and movable with relation to the surfaces of the window frame, and a keeper in the form of a strip of metal having spaced portions formed into projections for engagement with the member.

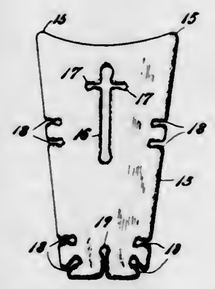
1,380,264. HEADLIGHT FOR AUTOMOBILES. OTTO A. STEUTERMANN, Reading Mass. Filed June 7, 1920. Serial No. 387,132. 2 Claims. (Cl. 240—41.)

1. A lamp including a forward section and a rear section, the rear section including a curved rear wall and a reflecting wall, said walls being disposed in spaced relation with each other, a bulb carried by each section, a lens carried by the forward section and disposed at an angle to the perpendicular, the bulb in the forward section being supported in a position to direct its light rays downwardly, a bracket member having connection with the forward section, and means for removably securing the sections together.



1,380,265. BOOKBINDING-MACHINE. WARD B. STORY, Brooklyn, N. Y., assignor to T. W. & C. B. Sheridan Company, New York, N. Y., a Corporation of New York. Filed Jan. 20, 1919. Serial No. 272,122. 21 Claims. (Cl. 11—1.)

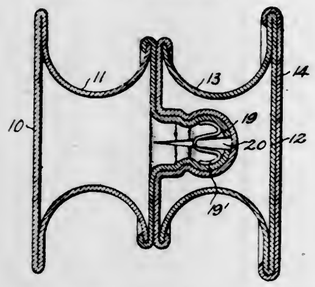
1. In combination, an endless series of book-conveying clamps, binding instrumentalities arranged in association therewith and adapted to operate on the groups of signatures in said clamps, means for assembling signatures into groups and introducing them into said clamps, means for detecting the presence of an imperfect signature as the groups are being assembled, and mechanism controlled by said means and operating on the group into which an imperfect signature enters to displace the same in its clamp and thus prevent the operation of the binding instrumentalities on said group.



13. In combination, an endless series of book-conveying clamps, means for assembling signatures into groups from a plurality of sources of sheet or signature supply and introducing said groups into said clamps, detecting means associated with each signature source and operating to detect imperfect signatures or the absence of a signature, and mechanism controlled by said detecting means and operating on a defective group to elevate the same just before its clamp closes.

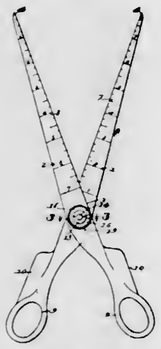
1,380,266. MANGLE. WILLIAM H. S. STRONG, Sandusky, Ohio. Filed Nov. 19, 1919. Serial No. 339,055. 17 Claims. (Cl. 68—9.)

3. In a mangle, the combination with a driven roll, and an iron connecting means between said roll and the driving gear, foot controlled means for interrupting the drive to said roll, and hand controlled means acting on said connecting means for rendering said foot controlled means operative or inoperative.



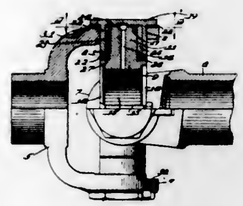
1,380,267. NECKTIE-FORM. FREDRIK STUART, Philadelphia, Pa. Filed July 9, 1920. Serial No. 395,041. 1 Claim. (Cl. 2—84.)

A necktie comprising a stiff form having an opening in its vertical central portion and also having slits reach-



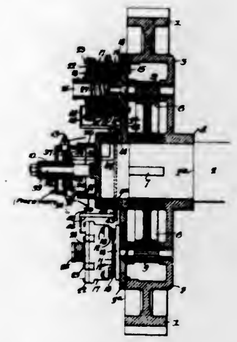
ing inwardly from its side edges, at intermediate points in the length thereof, and other slits reaching upwardly from its lower end, and a fabric member lapped over the upper end of the form and secured in the vertical central opening thereof and having folds disposed and held in the slits of the form.

1,380,268. CUFF-BUTTON. MICHAEL JOHN SULLIVAN, Holyoke, Mass. Filed Sept. 30, 1920. Serial No. 413,731. 1 Claim. (Cl. 24—102.)



A cuff button, including a pair of sections each comprising a base, a barrel secured to said base, a contact plate secured to the free edges of said barrel, one of said contact plates being formed with a rearwardly extending wall presenting a socket, said socket being formed substantially intermediate its depth with an inwardly extending flange, the second of said contact plates being formed with a stud terminating in a head, said stud being split throughout its entire length, and being formed with a groove substantially intermediate its extremities, the said flange being adapted to co-act with said groove, and an M-shaped spring arranged within the head of said stud for expanding the split portion of the same.

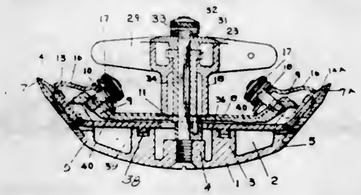
1,380,269. DIVIDERS. ALANO E. SUMERSILLE, San Juan, Porto Rico. Filed Oct. 22, 1918. Serial No. 259,198. 1 Claim. (Cl. 33—148.)



An implement comprising complemental sections or legs pivoted together at one end, a bolt passing through and securely fixed in one section and engaging the other section, an eyelet disposed in the latter section, the said bolt passing through the eyelet and being formed with a squared portion adjacent the outer face of the eyeleted section, a disk formed with a hole corresponding to the squared portion of the bolt and surrounding said squared portion and lying against the outer face of the section containing the eyelet, said disk having graduations and the eyeleted section having a mark to register with such graduations, a nut threadingly engaged with the bolt and bearing against the disk, and a set-screw threaded through the disk and adjustable to be engaged with the adjacent section whereby the two sections may be locked in angular relation to each other and as indicated by the movement of the mark beside the graduations.

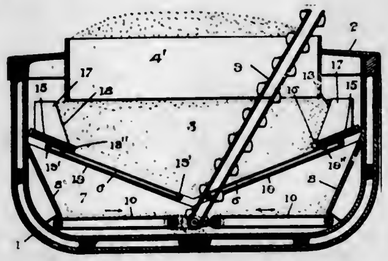
1,380,270. UNIVERSAL JOINT. CARL E. SWENSON, Rockford, Ill., assignor of one-fourth to Levin Faust, one-fourth to Eric S. Ekstrom, and one-fourth to Carl L. Anderson, Rockford, Ill. Filed June 7, 1920. Serial No. 387,024. 3 Claims. (Cl. 64—102.)

1. In a universal joint, a trunnion connector comprising an externally threaded socket member having a threaded connection with one of the members of the joint, a hardened bearing bushing ground on its inner and outer peripheries and having a press-fit in the socket of said threaded part, the trunnion having a radial bearing in said bushing and a thrust bearing at its outer end against said socket member, and means for lubricating the radial and thrust bearings.



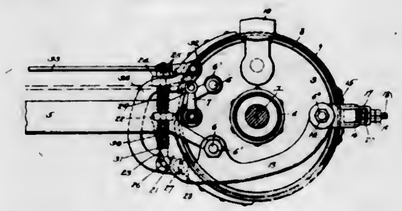
1,380,271. CLUTCH. JOSEPH W. THROPP, Trenton, N. J. Filed Aug. 7, 1919. Serial No. 315,873. 8 Claims. (Cl. 192—84.)

2. In a clutch, the combination of a movable member, a gear wheel carried thereby, a power transmitting member, a plurality of shafts journaled in the power transmitting member, pinions on said shafts in operative engagement with said gear wheel, means for locking each pinion to the power transmitting member whereby movement of the latter will be transmitted to the movable member, said means comprising a disk adjacent each pinion, a magnet adjacent said disk adapted when energized to attract the disk, and a spring bearing against the disk adapted to oppose the said attraction.



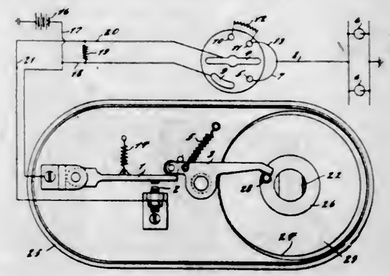
1,380,272. AUTOMATIC HAIR-CUTTING MACHINE. EPIFANIO V. N. TOMASULO, Cincinnati, Ohio. Filed Dec. 17, 1920. Serial No. 431,440. 43 Claims. (Cl. 30—1.)

1. In a power barber's clipper, a cutter element and a casing, said casing having a curved base adjacent the cutter element, and said cutter element being mounted on the casing and having a fixed member extending tangentially



from the upper end of the curve of the base and a handle mounted on and above the casing adjacent the cutter element.

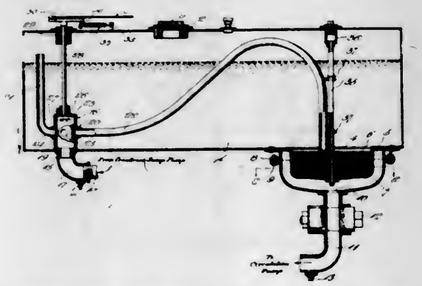
1,380,273. BUNKERING-BARGE. STARR TRUSCOTT, Birmingham, Ohio. Filed May 8, 1919. Serial No. 295,738. 8 Claims. (Cl. 214—15.)



1. A barge having a hold, a conveyer frame mounted to move over the bottom of the hold transaversely of said frame, an endless conveyer chain carried by said frame, means beyond one end of said frame for receiving the material conveyed by said chain, and a shield mounted on said frame and extending upwardly from one run of said chain.

1,380,274. OUTSIDE BRAKE. CLIFTON VAN COTT, Cold Spring Harbor, N. Y. Filed Aug. 9, 1919. Serial No. 316,325. 1 Claim. (Cl. 188—77.)

The combination with a stationary disk, a rotary drum and a brake band around the drum, of a bracket arm fixed to the disk, an extension on the rear end of the bracket arm, a laterally projecting block on the extension integral with said bracket arm, a socket frame on the intermediate portion of the brake band, into which the said block projects, a bolt on the block extending through the outer end of the socket frame, a nut on the outer end of the bolt, a coiled spring around the bolt, between the block and the outer end of the frame tending to move the intermediate portion of the brake band away from the drum, an operating lever pivotally connected to one end of the brake band, a rod pivotally connected to the lever, a perforated lug on the other end of the brake band receiving the rod, a perforated lug on the bracket arm through which the rod projects, coiled springs around the rod above and below said last mentioned lug, holding the rod in place, one of said springs exerting pressure on one end of the brake band and the other of said springs exerting pressure on the rod.

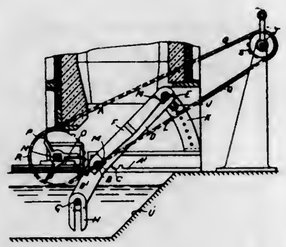


1,380,275. LIGHTING SYSTEM FOR AUTOMOBILES. RICHARD VARLEY, Englewood, N. J., assignor to Varley Duplex Magnet Company, a Corporation of New Jersey. Original application No. 324,450, filed Sept. 18, 1919. Divided and this application filed Dec. 26, 1919. Serial No. 347,412. 5 Claims. (Cl. 171—97.)

3. A lighting system for motor driven vehicles comprising a lamp and a circuit therefor including a source of electric current, a resistance in the circuit, a shunt around the resistance including a movable cnotact having a bias to open position, an operating member for the movable contact operative to close the contact and having a bias to non-operative position, a motor driven element, and means actuated by the motor driven element for moving the operating member to operative position.

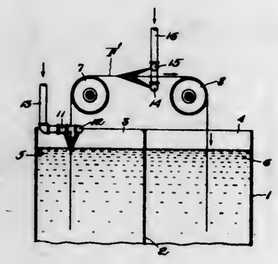
4. A lighting system for motor driven vehicles comprising a lamp and a circuit therefor including a source of electric current, a resistance in the circuit, a shunt around the resistance including a movable contact having a bias to open position, a pivoted lever adapted to engage the movable contact with one end and move it to closed position, a retractile spring operative to normally retract the lever, and a motor-operated device for actuating the lever including a rotative primary member connected to be driven by the motor and a rotative secondary member arranged to have a drag imparted to it by the primary member and operatively connected to the lever.

1,380,276. LUBRICATING SYSTEM. ALFRED WARD, St. Albans, N. Y. Filed July 13, 1920. Serial No. 395,854. 7 Claims. (Cl. 184—6.)



4. A lubricating system oil reservoir having an inlet and an outlet, a screen at the outlet, a valve controlled conduit for selectively returning oil from a circulating system to the reservoir and for conducting the oil through the reservoir from the inlet to the outlet, and a conduit for conducting a priming charge of oil through the reservoir and through the outlet thereof and through the screen.

1,380,277. CATALYTIC OXIDATION OF ORTHO-CRESOL. JOHN M. WEISS, New York, N. Y., and CHARLES R. DOWNS, Cliffside, N. J., assignors to The Barrett Company, a Corporation of New Jersey. Filed Dec. 12, 1919. Serial No. 344,370. 8 Claims. (Cl. 23—24.)

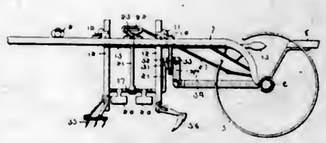


1. The method of producing salicylaldehyde and salicylic acid which comprises oxidizing ortho-crosol in the vapor phase with an oxygen containing gas in the presence of a metallic oxid as a catalyst.

1,380,278. GRATE FOR GAS-PRODUCERS AND CARBONIZING PLANTS. JOHN WELLS, Cairo, Egypt. Filed Nov. 1, 1919. Serial No. 335,080. 1 Claim. (Cl. 126—153.)

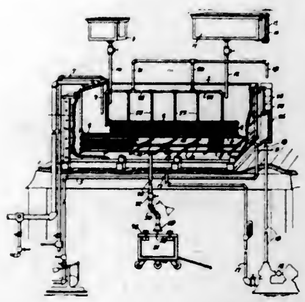
In a gas producer, a furnace body, an inclined grate arranged within the furnace body and pivotally supported therein at its rear end, means for adjustably holding said rear end of the grate in different horizontal positions for spacing the grate from the rear wall of the furnace body, means for adjustably supporting the forward upper end of the grate whereby siad grate may be supported at different angles in the lower portion of said furnace body, and a paddle wheel rotatably mounted in the rear portion of said furnace body above the lower end of said grate for supporting a body of fuel thereon and adapted to be operated for facilitating the discharge of ashes therefrom, substantially as described.

1,380,279. TREATMENT OF CINEMATOGRAPHIC FILMS. WILLIAM BURTON WESCOTT, Wellesley, Mass., assignors to Kalmus, Comstock & Wescott, Incorporated, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 28, 1918. Serial No. 214,086. 4 Claims. (Cl. 95—89.)



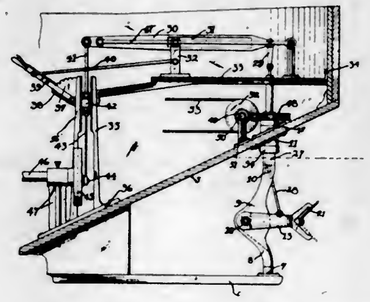
1. The method of treating a cinematographic film as it emerges from a body of liquid comprising directing a fluid stream downwardly along the film immediately above the body of liquid so that the stream will spread outwardly at the surface of the liquid and carry any substances floating on the surface of the liquid away from the place where the film emerges.

1,380,280. APPARATUS FOR STORING AND HANDLING LOGS. WILLIAM A. WHITCOMB, Millinocket, Me. Filed Oct. 24, 1919. Serial No. 332,898. 9 Claims. (Cl. 214—6.)



1. In an apparatus of the character specified, the combination of a pair of spaced towers; an inclined runway extending upwardly toward the upper portion of one of said towers; a tunnel extending from one of said towers to the other; and conveyer means extending through the tunnel, up the runway, across from one tower to the other, and back to the tunnel.

1,380,281. COTTON-CHOPPER. CHARLES W. WHITE, Chamblee, Ga. Filed Sept. 3, 1919. Serial No. 321,398. 5 Claims. (Cl. 97—45.)

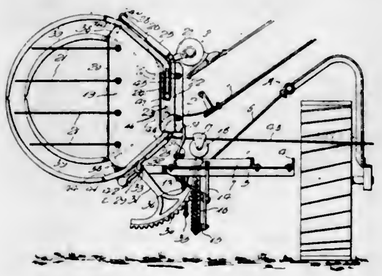


2. In a cotton chopper, a wheel mounted frame structure, standards suspended therefrom, cotton chopping means supported in the standards, an adjusting rod connected with the chopping means, an adjusting crank pivotally supported upon the frame structure and connected with the terminal of said rod, and manually operable means for adjusting the crank.

1,380,282. APPARATUS FOR PREPARING TEXTILE-TREATING BATHS. THEODORE WICKERSHAM, Philadelphia, Pa. Filed Nov. 24, 1919. Serial No. 340,432. 2 Claims. (Cl. 259—19.)

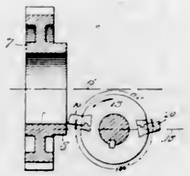
1. In apparatus for preparing a treating bath, the combination of a tank, means for heating the same, liquid containers mounted above the tank and having discharge pipes leading to the tank, a perforated pipe in the bottom of the tank for collection of the material contained therein, a perforated pipe in the top of the tank for the inlet of such material, a pump connected to said pipes for drawing the material from the bottom of the tank and discharging it into the top of the same to insure proper circulation and emulsification thereof, and means for discharging the material from the tank.

1,380,283. PROPELLING MECHANISM FOR VESSELS. JAMES WORCESTER, Waltham, Mass. Filed Oct. 11, 1920. Serial No. 416,240. 15 Claims. (Cl. 115—29.)



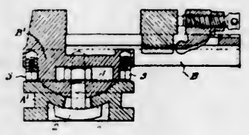
1. A propelling mechanism comprising a horizontally pivoted propeller frame, a propeller blade pivoted thereto, a rotary support to which said frame is pivoted, means for oscillating said frame, and means for rotating said support to swing the frame horizontally in the arc of a circle for steering and reversing purposes.

1,380,284. ANTICREEPING RAIL-CHAIR. STANISLAW WAUBEL, Genoa, Nebr. Filed June 1, 1920. Serial No. 385,744. 1 Claim. (Cl. 238—288.)



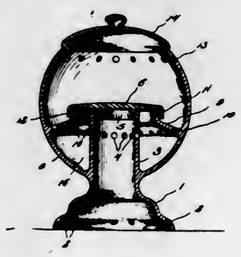
A rail chair comprising a plate having a flat bottom portion forming a rail base seat, an integral inwardly directed rail engaging flange formed adjacent the outer end of said plate and overlying the bottom portion, said plate also provided with spike receiving openings intersecting said flange, the other end of said plate being of increased cross sectional area to form an intermediate shoulder to cooperate with said plate flange to hold a rail seated therebetween against movement, the terminal of said enlarged end extending upwardly at right angles to the bottom plate to form a vertical anchoring extension and a connecting rod fastened to the extensions of adjacent chairs.

1,380,285. AUTOMATIC GRAIN-SHOCKER. CARL S. AGRE, Volga, S. D. Filed May 24, 1920. Serial No. 383,826. 22 Claims. (Cl. 56—423.)



1. A shock forming attachment for a harvester comprising a support, a cradle, means connecting the cradle with the support for swinging movement from a filling position to a dumping position, and compressing jaws, one jaw being connected with the cradle mounting means and moving toward the second jaw to gradually compress a shock during the entire movement of the cradle to a dumping position.

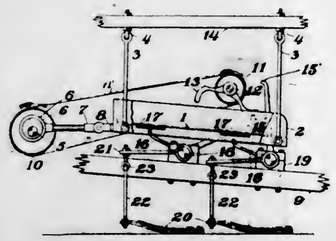
1,380,286. METHOD OF AND APPARATUS FOR HOBBING TEETH ON REVOLVING BLANKS. CARL L. ANDERSON and CARL E. SWENSON, Rockford, Ill. Filed Nov. 11, 1918. Serial No. 261,947. 12 Claims. (Cl. 90—3.)



1. The method of hobbing radial face teeth on a revolving blank which consists in setting the hobbing blades so that their edges designed to cut radial faces on the blank will revolve in a plane of rotation which is parallel to a radial plane of the blank and spaced a predetermined distance from said radial plane.

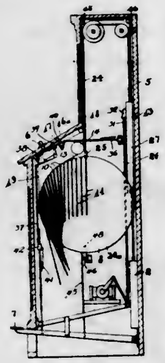
1,380,287. ADJUSTABLE WORK-HOLDER FOR MACHINE-TOOLS AND THE LIKE. FRANÇOIS-LOUIS BRODU, Nantes, France. Filed Dec. 9, 1919. Serial No. 343,682. 2 Claims. (Cl. 90—60.)

1. An adjustable work holder for machine tools comprising a base adapted to be secured to a machine tool and having a spherical concave surface, a platform adapted to receive the work to be operated upon and having a spherical convex surface, a bolt holding the base and the platform together with their spherical faces in contact, and a plurality of adjusting screws for the purpose of supporting the platform in any adjusted position.



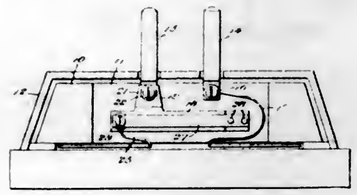
1,380,288. SOAP-DISH. AMY LEATHERS CHEAK, Waddy, Ky. Filed Feb. 15, 1921. Serial No. 445,203. 2 Claims. (Cl. 45—28.)

1. In a soap holder, an apertured base having a tubular extension, a globular body integrally formed on and sur-



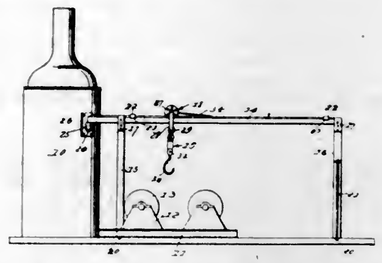
rounding the extension, said body having a partition directed upwardly and toward but spaced from the upper end of the tubular member, a soap holder removably connected to the end of the tubular member and resting on the partition, and said body partition, tubular member and base having air inlet apertures.

1,380,289. SCREENING DEVICE. HENRY H. CHILDERS, Louisville, Ky. Filed Mar. 5, 1920. Serial No. 363,381. 6 Claims. (Cl. 83—56.)



1. In a device of the character described, a longitudinally vibrating member embodying a screen, means to vibrate the member longitudinally, hammer rock shafts arrranged beneath and extending transversely of the longitudinally vibrating member and projecting outwardly beyond the sides of the same, a transverse cam shaft arranged above the longitudinally vibrating member and extending outwardly beyond one side thereof, cams disposed upon one side of the vibrating member and carried by the cam shaft, cam rockers disposed upon the same side of the vibrating member and secured to the hammer rock shafts and arranged to be engaged by said cams, yielding means arranged upon the opposite side of the vibrating member and connected with the hammer rock shafts to turn them in one direction, hammers arranged beneath the screen of the vibrating member and secured to the rock shafts to be operated thereby, and hammer plates secured to the lower surface of the screen and arranged to be struck by said hammers.

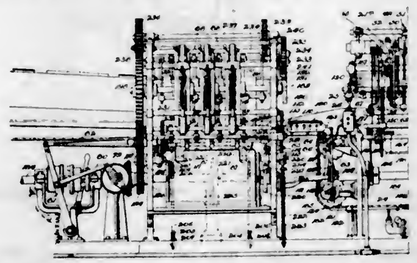
1,380,290. INFORMATION-DISPLAYING DEVICE. WILLIAM C. CUTLER, North Glendale, Calif. Filed Feb. 2, 1920. Serial No. 355,826. 5 Claims. (Cl. 40—65.)



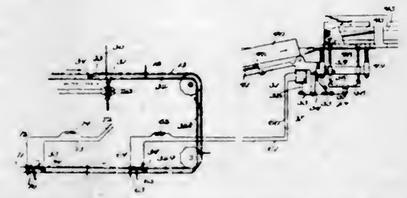
1. In an information-displaying device, circular members having a suitable number of means for receiving and storing information-displaying members in the periphery of the circular members, means disposed over the periphery of the circular member so as to encircle the sides and bottom but leaving a space in the top portion of the periphery for holding the information-displaying members engaged with the circular members in the storing portion of the periphery while allowing a removing of a card when the circular members are turned so as to bring that card to a point where the means are left spaced from the periphery, means for moving the information-displaying members on the circular members to such a point as a selective position, and means for lifting such selected member into displaying position.

1,380,291. TEMPERATURE-REGULATOR. JOHN J. DANYLCHUK, Saskatoon, Saskatchewan, Canada. Filed Mar. 30, 1920. Serial No. 369,946. 1 Claim. (Cl. 219—25.)

In a device of the class described, an electrically heated member having conductor terminals, one of the terminals being connected with one end of the resistant element, a temperature regulator comprising an arm, a lug projecting from said arm and connected to the other of said conductor terminals, a fixed contact carried by said arm and connected with the opposite end of the resistant element, an expansion member associated with said arm and composed of two different metals, a movable contact adjustably mounted upon the expansion member and normally engaged with the fixed contact, said expansion member being actuated by heat radiating from said heated member.



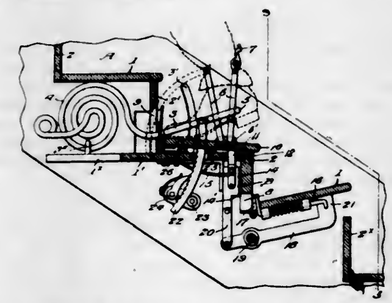
1,380,292. DONKEY-ENGINE CRANE. HARRY A. FREDERICKS, Port Angeles, Wash. Filed Feb. 10, 1920. Serial No. 357,497. 3 Claims. (Cl. 212—71.)



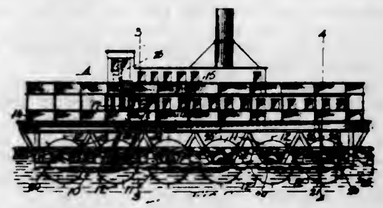
1. An apparatus for the purpose described having parallel track rails and means for supporting the same, carriers or travelers mounted upon said rails and consisting of rollers having depending stirrups, and hoisting devices suspended from the stirrups and provided with means for engaging engine drums, said rollers being provided with peripheral sockets for engagement by an operating pin or rod.

1,380,293. SIGNATURE-GATHERING MACHINE. CHARLES GITZENDANNER, Brooklyn, N. Y., assignor to T. W. & C. B. Sheridan Company, New York, N. Y., a Corporation of New York. Filed Jan. 18, 1919. Serial No. 271,892. 51 Claims. (Cl. 270—56.)

1. In a device of the character described, a support, means for assembling signatures from a plurality of sources of signature supply including a conveyer that progresses the signatures along said support, a plurality of pivoted elements carried by said conveyer, a track or way provided with displaceable sections over which said pivoted elements normally ride, one section being associated with each source of signature supply, detecting means associated with each source of signature supply for displacing its corresponding section to permit one of said elements to drop through said track, and a member operated by said dropped element.

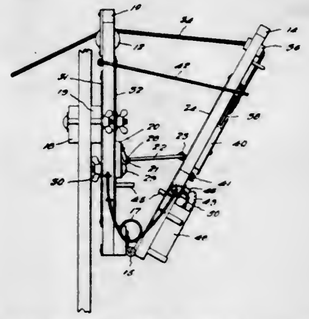


1,380,294. BOOKBINDING-MACHINE. CHARLES GITZENDANNER, Brooklyn, N. Y., assignor to T. W. & C. B. Sheridan Company, New York, N. Y., a Corporation of New York. Filed Jan. 25, 1919, Serial No. 273,052. Renewed Nov. 29, 1920. Serial No. 427,208. 14 Claims. (Cl. 11—1.)



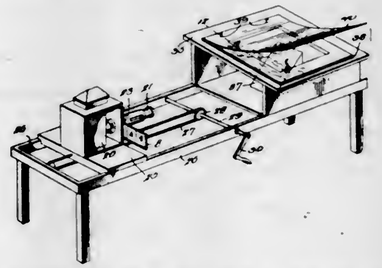
1. In combination, a traveling clamp, a leveling table over which said clamp moves and on which signature-groups rest, means for assembling signatures into groups from a plurality of sources of sheet or signature supply including a main conveyer provided with a plurality of stops or trips carried thereby, means for introducing a group of signatures into said clamp, detecting means associated with each signature source and operating to set one of said stops or trips should an imperfect signature be seized, and means controlled by said set stop elevating said table when a defective group is resting thereon and just before the clamp closes on said group.

1,380,295. STAIRWAY-TRAP. JEREMIAH HICKS, Philadelphia, Pa. Filed May 18, 1920. Serial No. 382,386. 9 Claims. (Cl. 43—59.)



1. In combination with a stairway, a pair of trap jaws connected with one of the steps thereof, spring arms engaging said jaws and connected with a part of the stairway, a trigger plate hinged to the step carrying the jaws, means engaging a part of the stairway for holding the jaws in open position and a trigger actuated by the trigger plate for releasing such means.

1,380,296. BOAT. POINDEXTER HILL, Bethesda, Ark. Filed Aug. 16, 1920. Serial No. 403,718. 3 Claims. (Cl. 114—163.)



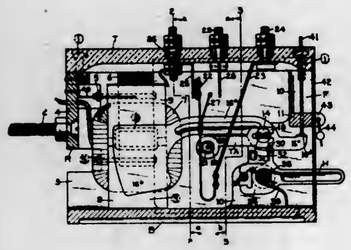
3. In a boat of the buoyant, propelling type comprising transversely disposed paddle wheels, in combination with the shaft of the rear paddle wheel, of rudders, means slidably mounted on the shaft and connected with the rudders and operating the latter, a steering wheel, and a connection between the steering wheel and said means for the purpose specified.

1,380,297. TENSION DEVICE FOR USE IN ORTHOPEDIC SURGERY. CHARLES B. HUGHES, New Orleans, La. Filed Oct. 5, 1920. Serial No. 414,732. 6 Claims. (Cl. 128—84.)

1. In a device of the class described, an arm to be mounted in a fixed position, an arm mounted to swing with reference thereto, a spring for resisting the action of such movement, and a flexible device for moving the second named arm against the action of the spring.

1,380,298. PROCESS OF AND APPARATUS FOR PRODUCING MOVING-PICTURE FILMS. EARL HURD, New York, N. Y. Filed Oct. 30, 1919. Serial No. 334,602. 9 Claims. (Cl. 88—16.)

7. A process as defined in claim 6, wherein the successively projected images of the different poses of the



movable object are graduated in size to produce the effect of an advance or recession of said movable object with respect to the picture plane of the first pose.

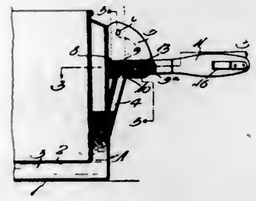
1,380,299. WAX-FINISH REMOVER. JOHN F. HURLEY, Denver, Colo. Filed July 6, 1920. Serial No. 394,316. 11 Claims. (Cl. 87—5.)

1. A process of making a wax-coating remover which consists in preparing a strong solution of soap in water, then introducing sufficient weak acid into the solution to react with a portion only of the soap, agitating the mixture, and finally adding a wax-coating loosening material capable of dissolving soap.

6. A composition for removing wax-coatings for varnish or other surfaces resulting from the mixture, by weight, of an aqueous solution of substantially eight parts of soap in thirty-two parts of water, with one part of a weak acid capable of reacting with soap, and one part of a generally alcoholic wax-coating loosening solvent capable of dissolving soap.

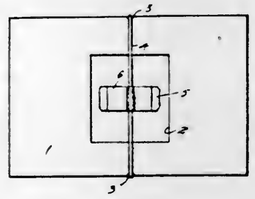
1,380,300. PROTECTIVE DEVICE. RICHARD C. LEAKE, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y., a Corporation of New York. Filed July 8, 1919. Serial No. 309,278. 12 Claims. (Cl. 200—89.)

1. A protective device for safeguarding electric interlocking systems comprising a normally closed circuit controller biased to open position, means including a coöperating latch and catch and operatively connected to said circuit controller for holding it in its normal position, and an electro-magnetic device including a vane adapted to trip said latch to permit said circuit controller to open when alternating current is supplied to the electro-magnetic device.



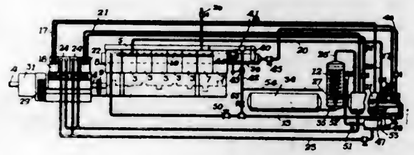
1,380,301. MINE-CAR COUPLING. ISAAC MARTIN, Pittsburgh, Pa. Filed Feb. 28, 1921. Serial No. 448,704. 1 Claim. (Cl. 213—62.)

In a device of the character described, a body, and two oppositely disposed hook members pivoted in said body adjacent to the ends thereof and adapted for engagement through links secured to the draw bars of adjacent cars, said hooks being so relatively positioned within the body as to contact with each other when raised into substantially vertical position.



1,380,302. COOKING UTENSIL. PETER MOE, Seattle, Wash. Filed Apr. 15, 1920. Serial No. 374,118. 11 Claims. (Cl. 53—1.)

2. A device of the character set forth comprising a container having an outlet, a handle movable from a horizontal position to a vertical position and adapted to serve as a closure for the outlet, and co-acting means between

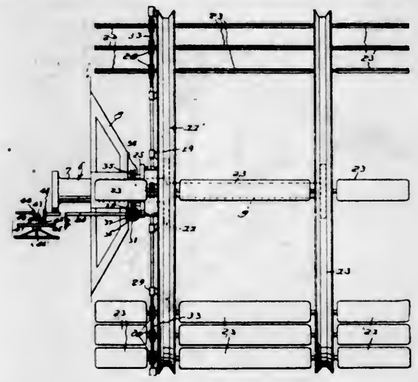


the container and the handle to retain the latter in closing position.

1,380,303. RATTLER. BERNARD NEVIN, Toledo, Ohio. Filed June 18, 1920. Serial No. 389,992. 1 Claim. (Cl. 46—37.)

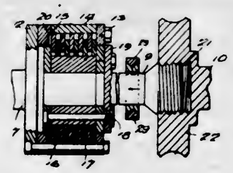
A rattler comprising a card having an opening and notches in its edges, an elastic band fitting in said notches and extending across said opening, a sound producing element positioned between the runs of the band within the opening, strips secured to said sound producing element and overlying the runs of the band, said sound producing element adapted to be manually rotated until the band is fully twisted, a wrapper about the card and said element and adapted to be positioned in an envelop along with the card, said sound producing device adapted to be rapidly rotated against the wrapper by the band unwinding when the card is removed from the envelop to create a sound.

1,380,304. PROPULSION FOR SUBMARINE VESSELS. FRED E. NORTON, Worcester, Mass. Filed Oct. 11, 1917. Serial No. 195,911. 6 Claims. (Cl. 60—14.)



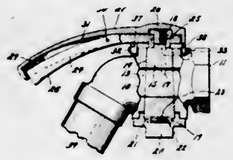
1. The herein described method for the propulsion of a submarine vessel, which consists in making a storing liquid oxygen during the unsubmerged running of the vessel, circulating said oxygen, when the vessel is running submerged, in heat exchanging relation to the exhaust gases from the engines of the vessel, whereby to liquefy said exhaust gases, and employing said liquefied exhaust gases, when the vessel is unsubmerged, to assist in the liquefaction of the oxygen.

1,380,305. VARIABLE-PITCH PROPELLER. HANS P. JENSEN-BEARLUNDD, Lisbon, Portugal. Filed Jan. 31, 1919. Serial No. 274,342. 5 Claims. (Cl. 170—150.)



1. In combination with a propeller, a rotatable shaft, a frame carried by and rotating with the shaft, oscillating blades mounted in the frame, members slidably mounted

on the frame and operably connected with the adjacent blades for rocking the blades, means on the shaft having eccentric connection with each of the members for sliding

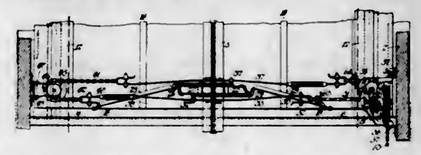


and rotating the members to consequently oscillate the blades to vary the pitch thereof in timed relation with and during the rotation of the shaft.

1,380,306. AUTOMATIC CLUTCH. HANS P. JENSEN-BEARLUNDD, Lisbon, Portugal. Filed July 2, 1919. Serial No. 308,253. 8 Claims. (Cl. 192—103.)

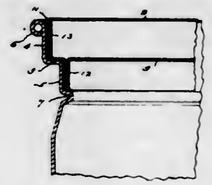
1. In combination, drive, driven and intermediate shaft sections, a clutch connecting the intermediate and driven shaft sections, and means responsive to independent rotary movement of the drive and intermediate shafts to control the clutch.

1,380,307. VALVE. WILLIAM R. H. CAPEWELL, Jamesburg, N. J., assignor of one-fourth to William Heinrich, Merchantville, N. J. Filed Nov. 17, 1919. Serial No. 338,702. 3 Claims. (Cl. 251—165.)



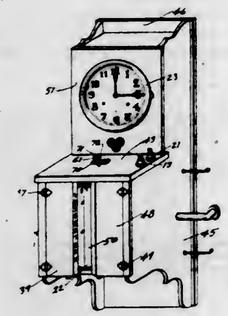
1. An air line valve comprising a body formed with a passage and a plurality of coupling ends and having a vertical bore therein traversing said passage, a valve proper provided with a cross passage and a vertical groove on the periphery, said groove with said body forming a bleed opening, means for movably seating said valve proper in said body, a handle having connection with a valve at the upper end thereof and disposed to operate the valve when the handle is operated to move the valve from an open to a closed or intermediate position relative to said body, the closed position of the valve registering the bleed opening with a passage of one of the coupling ends of the body, a handle covering pivoted on the handle and having the handle lying substantially within the same, a spring normally spacing one end of the handle covering from one end of the handle positioning stop flanges projecting from the body, a finger depending from the handle to engage with certain of said flanges and a second finger projecting from the covering to engage with other of said flanges, the engagement of said fingers with said flanges locking said handle and covering in different positions relative to said body.

1,380,308. COVER FOR DISHES. WILLIAM F. ROGERS, Taunton, Mass., assignor to Reed and Barton Corporation, Taunton, Mass., a Corporation of Massachusetts. Filed Apr. 29, 1920. Serial No. 377,622. 2 Claims. (Cl. 65—16.)



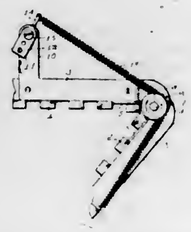
1. A cover for dishes having a flat top closure, and a tapering side wall, and being provided with a supporting ledge on the side wall around its open end, and with a band on the marginal part of the top closure projecting above the plane of the top closure.

1,380,309. MULTIPLE-SASH-OPERATING MECHANISM. CHARLES RUPP, Philadelphia, Pa., assignor to J. S. Thorn Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 15, 1919. Serial No. 297,400. 8 Claims. (Cl. 268—18.)



4. The combination with a structure having an opening, the effective area of which is to be controlled; of a closure arranged in movable relation with said opening; a lever pivotally connected with said closure by a link; a second lever pivotally connected with said first lever, by another link; said second lever being L-shaped and having a portion normally extending parallel with and supporting said second link, and a portion extending transversely thereto; and means arranged to actuate said levers to move said closure.

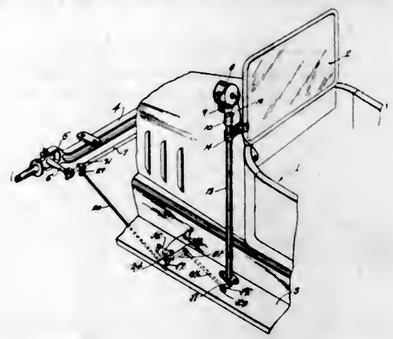
1,380,310. DISH-WASHING-MACHINE RECEPTACLE. FRANK E. WOLCOTT, Hartford, Conn. Filed May 15, 1920. Serial No. 381,661. 4 Claims. (Cl. 220—42.)



1. A dish washing machine receptacle comprising a tank having its side walls shaped to provide an inwardly extending cover seat below its upper edge and an inwardly extending ledge below said seat, and a cover fitting into the tank with its under surface resting upon said seat, said cover having a lip that extends downward below the seat to said ledge.

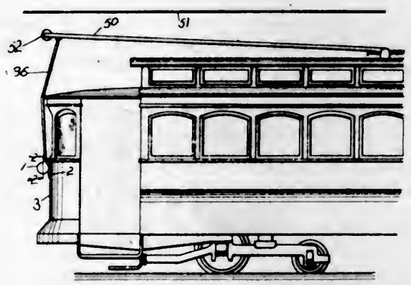
1,380,311. AUTOMATIC-CALL CLOCK. CHARLES R. BACON, Los Angeles, Calif. Filed Apr. 21, 1919. Serial No. 291,736. 3 Claims. (Cl. 161—2.)

1. A chronological switch comprising a rotatably mounted cylinder having holes chronologically arranged in vertical rows and numerically arranged in horizontal rows and chronological indications for the vertical rows and numerical indications for the horizontal rows, circuit breaker members adapted to be removably inserted in the holes, circuit breaker terminals in position to be engaged by the circuit breaker members, a clock, gearing connecting the clock mechanism to rotate the cylinder intermittently, means for disconnecting the cylinder from the clock, an electric circuit including audible signals and said circuit breaker members, and a switch located in said circuit and adapted to be opened upon the actuation of said means for disconnecting the cylinder from the clock.



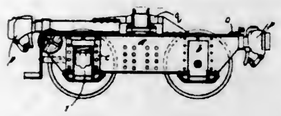
1,380,312. GATE-HINGE. ROBERT PEARCE BELLICAN, Natchez, Miss. Filed Mar. 5, 1921. Serial No. 449,921. 4 Claims. (Cl. 16—25.)

3. The combination with a fence and gate, of a pair of leaves secured against the upper faces of the fence and gate and having registering perforations therein, downwardly extending plates integral with the leaves and secured against the inner faces of the fence and gate, registering bearing sleeves integral with the plates, a hinge pin extending through the bearing sleeves and perforation, a pulley mounted on the upper end of the hinge pin, a contraction spring connecting the leaves and engageable with the pulley upon opening of the gate.



1,380,313. SEARCHLIGHT FOR MOTOR-VEHICLES. BERT CARLISLE, Santa Ana, Calif. Filed June 24, 1920. Serial No. 391,369. 2 Claims. (Cl. 240—62.)

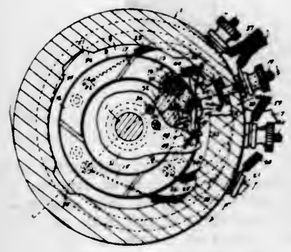
1. The combination with a connecting rod for the steering knuckles of a motor vehicle, of a rotatable supporting rod, a searchlight upon said rod, a pivoted bearing, arms extending from said bearing and said supporting rod, a link connecting said arms, and a connection between said



connecting rod and said bearing for turning the latter with the movement of said connecting rod.

1,380,314. TROLLEY-RETRIEVER. IRA L. CARPENTER, Los Angeles, Calif., assignor of one-half to W. E. Ayres, Los Angeles, Calif. Filed Dec. 6, 1920. Serial No. 428,707. 2 Claims. (Cl. 191—85.)

1. A trolley retriever comprising a head carrying a hub and a pawl wheel; a shaft mounted in the hub and key slotted from end to end; a casing mounted upon the head concentric to the shaft; a spring drum; a spring in the spring drum, the inner end of the spring being bent to fit in the key slot and the spring drum fitting loosely in the casing and having heads fitting upon the shaft; pawls carried by one head to engage the pawl wheel; blocks carried by the other head and having pawl faces; a second drum; a second spring in the second drum and having an end bent to fit in the key slot, the second drum being smaller than the casing; heads upon the second drum fitting loosely in the casing and loosely upon the shaft; spring actuated centrifugal pawls carried by one head to engage the blocks; and a rope mounted upon the second drum and extending through the casing.

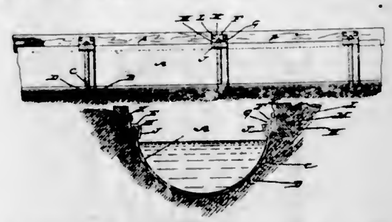


1,380,315. LOGGING-TRUCK. ELBERT G. CHANDLER, Portland, Oreg. Filed Nov. 6, 1919. Serial No. 336,168. 6 Claims. (Cl. 105—160.)

1. A logging truck, the combination of sides each consisting of a one piece metal flanged beam, journal boxes

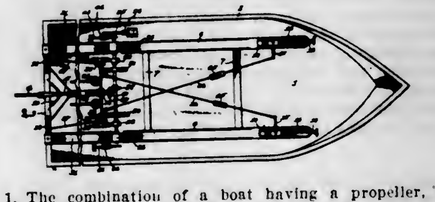
carried by the sides, the ends of the sides extending a substantial distance beyond said journal boxes, transverse end-sills secured to the flanges of the extensions of the sides, and coupling elements carried by said end-sills, the connection of the end-sills to the flanges of the opposing sides bracing said side extensions to resist bending due to blows delivered against them to thereby prevent the displacement of said end-sills and throwing out of alinement of the coupling elements.

1,380,316. TIMER. EDWARD T. CURTISS, Los Angeles, Calif. Filed Mar. 24, 1919. Serial No. 284,787. 3 Claims. (Cl. 200—19.)



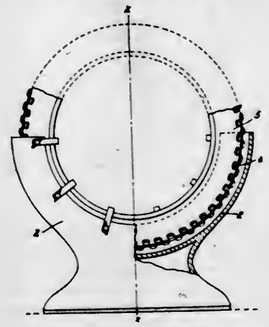
2. In a timer in combination with a timing shaft mounted in a gear housing, a hub fixed upon the shaft having an insulating member, a brush flexibly carried in the insulating member, a casing rotatably mounted against the gear housing, an annular ring positioned within the casing concentric to the timing shaft and opposed to the hub, a commutator ring fixed to the face of the annular ring in the casing and insulated from the casing and positioned to contact with the brush carried by the hub, an annular flange disposed inwardly from the casing having notches equally spaced, a make and break arm pivotally mounted on the hub, an outer end of which carried a pad of insulation and bears with resilient pressure against the notched flange of the casing and having on its inner end a contact point, a spring for holding the outer end of the lever resiliently against the notched flange, a second contact point carried by the hub in electric communication with the timing shaft positioned to be engaged by the point on the inner end of the arm, means electrically connecting the arm with the brush and means for connecting the annular commutator of the casing into the electric circuit of an ignition system.

1,380,317. TOOL-HOLDER. OSCAR GUSTAFSON, Seattle, Wash. Filed May 12, 1920. Serial No. 380,837. 3 Claims. (Cl. 29—96.)



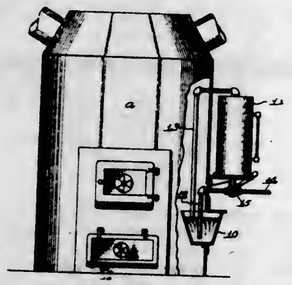
1. A tool holder for the cutters of lathes, boring mill machines, planers, etc., comprising integral shank and head portions, the latter being provided with a groove in its side face extending longitudinally thereof for the reception of a cutter, a bolt extending through a passage in said head and projecting through the face thereof at the top of said groove and extending rearwardly and downwardly oblique to the sides of the head, a notch in the head of the bolt providing an overhanging flange to engage one edge of the cutter and clamp it against the opposite ledge of said groove.

1,380,318. SHEET-METAL FLUME. LEWIS REED, Woods Cross, Utah. Filed Apr. 30, 1919. Serial No. 293,733. 2 Claims. (Cl. 61—15.)



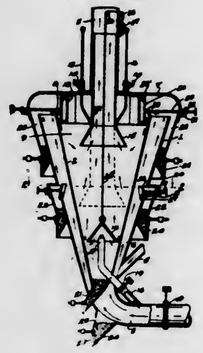
2. A sheet metal flume section having a continuous inwardly extending flange on each end thereof, the flange on one end being on the outer side of the main body of said section and in longitudinal alinement therewith, and the flange on the other end thereof being on the inner side of said body and parallel thereto, which section has a continuous groove adjacent the flange last-mentioned for the reception of a clamping member.

1,380,319. AUTOMOBILE-BOAT. WALTER H. HOUSEMAN and GEORGE BRONSON, Highland Park, Mich. Filed June 28, 1920. Serial No. 392,321. 5 Claims. (Cl. 115—0.5.)



1. The combination of a boat having a propeller, a shaft in said boat for driving the boat propeller, wheels on said shaft, an automobile supported in said boat with its rear wheels in driving relation to said shaft wheels, and steering means for the boat actuated from said shaft and controlled by the steering column assembly of the automobile.

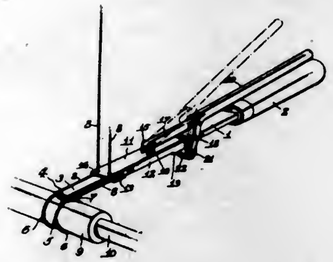
1,380,320. METHOD OF PREPARING RETREAD-MATRIX AND PRODUCT THEREOF. ERNEST C. HUFFORD, Los Angeles, Calif. Filed Dec. 11, 1919. Serial No. 344,249. 1 Claim. (Cl. 18—44.)



The herein described method of producing a tire retreading matrix which consists in placing a tire casing having the desired tread surface conformation in a mold and arranging said parts so that the tread surface of the casing is spaced apart from the surface of the mold then pouring molten metal in the space between the mold and tread surface of the casing and then applying the retreading matrix so formed to the tire that is to be retreaded.

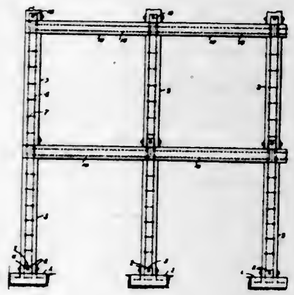
1,380,321. AIR-MOISTENING STRUCTURE FOR HOT-AIR FURNACES. ERNEST G. LIEBOLD, Detroit, Mich. Filed Jan. 19, 1920. Serial No. 352,504. 2 Claims. (Cl. 126—113.)

1. In air moistening means for hot air furnaces, an open-top container accessible to the flowing heated air of the furnace, a supply tank external of the furnace, and having a supply pipe leading therefrom to a point adjacent the bottom of the container, and a control pipe leading from the top of the tank and opening into the container at a point spaced above the plane of the discharge end of the supply pipe, the spacing distance being greater than the distance between such discharge end and the container bottom to produce a liquid content within the container above such discharge end sufficient to cause disturbance of such content substantially throughout the container and eliminate static conditions within the container by the delivery of liquid at such discharge end, said tank being positioned above the plane of the liquid level produced by the action of the control pipe.



1,380,322. PNEUMATIC DUST-SEPARATOR. LYCURGUS LINDSAY and ERNEST M. DAVIDS, Los Angeles, Calif. Filed Apr. 20, 1920. Serial No. 375,335. 7 Claims. (Cl. 83—54.)

1. A separator comprising an upwardly inclined conical passage of increasing width, an air intake at the lower end of said passage directing air upwardly through the same, means for directing material downwardly into the path of said air in said passage, suction creating means at the upper end of said passage, and take-off spouts at different levels along the outer wall of said passage.

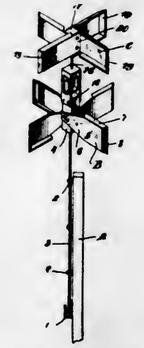


1,380,323. WIRE-BENDING TOOL. JAMES MCVAY, River Rouge, Mich. Filed Mar. 18, 1920. Serial No. 366,974. 1 Claim. (Cl. 81—9.3.)

A tool of the type described comprising a bar having a groove at its outer end adapted to engage a wire yoke having wire ends extending through the yoke to form loop portions adapted to be drawn taut, a slide head on said bar and of greater width than said bar and having openings at its outer end and adjacent the side edges of said bar to receive the wire ends of said yoke, a lever having a bifurcated end supported from the one face of

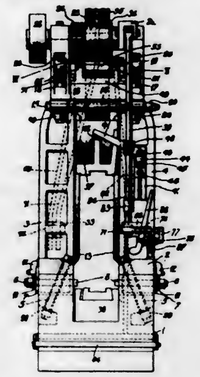
said bar, and a link connecting said lever to said slide head for shifting said slide head on said bar so that the wire ends in the outer end of said slide head may be drawn taut by movement of said slide head on said bar, said wire ends being bent relative to said yoke by bodily swinging said tool through an arc relative to said yoke.

1,380,324. CONCRETE CONSTRUCTION. WILLIAM S. PIGGINS, Detroit, Mich. Filed Jan. 30, 1919. Serial No. 273,955. 1 Claim. (Cl. 72—1.)



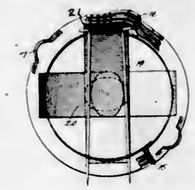
In concrete construction, the combination of a column having longitudinal reinforcing members extending above its upper end, beams having heads abutting each other on said column, said beams having longitudinal reinforcing members therein, the ends of the longitudinal members being formed with sockets adapted to receive the upper ends of the reinforcing members of the column and angle plates spaced from the ends of the beams having one flange embedded in the beam substantially parallel to its longitudinal axis and the other flange extending upward above the surface of the beam, the flanges of the several beams upon the column together forming a socket adapted to receive the lower end of another column seated on said beam ends and connected to the vertical flanges of said angle plates.

1,380,325. TOY WIND-WHEEL. HERMAN SCHLIRF, Milwaukee, Oreg. Filed Apr. 9, 1920. Serial No. 372,726. 4 Claims. (Cl. 46—14.)



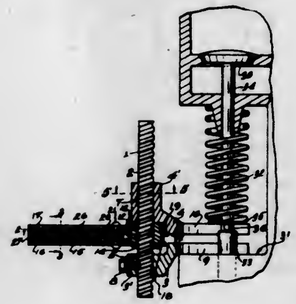
1. A toy comprising a standard, a bracket on the standard, a rotatable wind wheel on the standard having its

end supported on the bracket, a one piece supporting member mounted on the wind wheel and a second wind



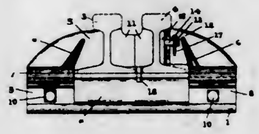
wheel carried in the supporting member and adapted for rotation in an opposite direction to the first named wind wheel.

1,380,326. DROP-HAMMER. WARREN W. STOLER, Detroit, Mich. Filed Mar. 29, 1919. Serial No. 285,989. 2 Claims. (Cl. 78—29.)



1. A drop hammer having a base and opposed frames thereon, depending lugs carried by said frames and extending into the hammer base, T bolts for laterally adjusting the frames on the base and extending through said lugs and each bolt having an exposed head against the inner wall of said base, a nut against the opposite side of each lug so that the bolts may readily be removed without lifting said frames from said base, and means for anchoring said frames on said base.

1,380,327. TRANSPLANTING-RECEPTACLE. LIONEL WEIL, Goldsboro, N. C. Filed June 14, 1920. Serial No. 388,820. 5 Claims. (Cl. 55—119.)



1. A transplanting receptacle, including a pair of side walls hingedly secured together, and means associated with said side walls adjacent their lower edges for supporting substances within said receptacle, and means for bracing said supporting means.

1,380,328. VALVE-SPRING LIFTER FOR INTERNAL-COMBUSTION ENGINES. GEORGE T. WROUGHTON, Los Angeles, Calif. Filed Feb. 25, 1920. Serial No. 361,346. 1 Claim. (Cl. 29—86.3.)

A device of the character described including a screw, a nut threaded upon said screw, a ratchet upon said nut, a handle oscillatively mounted upon said nut, a double pawl pivoted upon said handle and arranged to have one or the other tooth thereof in engagement with said ratchet, a lug projecting rearwardly from said pawl, and a spring secured to said handle and received around the lug of said pawl at the opposite ends for yieldably forcing said pawl into one or the other of its positions.

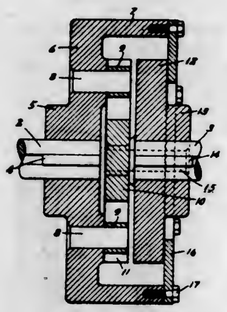
1,380,329. GUARD-RAIL CLAMP. ROBERT E. YOLTON, Birmingham, Ala., assignor to Kilby Frog & Switch Company, a Corporation of Alabama. Filed Dec. 18, 1920. Serial No. 431,690. 3 Claims. (Cl. 238—20.)

1. A guard rail clamp comprising, in combination, a pair of rail engaging clamp elements having transversely slotted bases projecting below the rails, a base member having a top flange adapted to support the rails to be clamped, means to rigidly mount said clamp elements on the ends of said base member, and a taper member adapted to wedge the assembled clamp in operative engagement with the rails.

1,380,330. FLEXIBLE COUPLING. GEORGE J. ZIEGLER, Los Angeles, Calif., assignor of one-third to Sherwin Gibbons, one-third to Ernest Stewart, and one-third to Frederick C. Beutel, Los Angeles, Calif. Filed Feb. 24, 1920. Serial No. 360,560. 1 Claim. (Cl. 64—101.)

A flexible shaft coupling comprising a disk keyed to the drive shaft, a disk keyed to the driven shaft, a transmission disk juxtaposed intermediate said disks, said transmission disk having radial slots in its periphery, pins in said first mentioned disk, rollers on said pins, said pins and rollers adapted to engage diametrically opposed slots in the transmission disk, similar pins and rollers on the second mentioned disk adapted to occupy the oppositely disposed members of a pair of the slots in the transmission disk, a marginal flange projecting outwardly from one

side of the first mentioned disk and inclosing the second mentioned disk and the transmission disk, and a ring



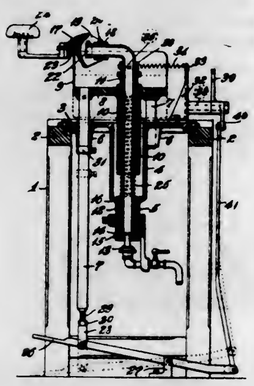


plate secured to the face of said marginal flange and adapted to contact with the rear face of the second mentioned disk to form an oil chamber.

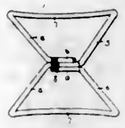
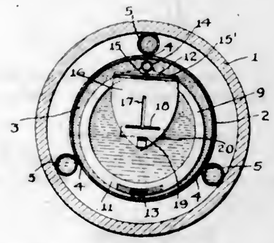
1,380,331. COLLAR-SHAPING MACHINE. CHARLES L. BRALEY, Cincinnati, Ohio, assignor to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Dec. 2, 1916, Serial No. 134,707. Renewed Oct. 29, 1920. Serial No. 420,577. 20 Claims. (Cl. 68—9.)



1. In a collar shaper, a collar form member, an ironing member, means normally tending to produce ironing engagement and pressure between said members, a hand operated device connected to one of said members for producing relative rotative ironing movement, and means for preventing movement of said ironing member by the operator out of a fixed orbit while said members are in ironing engagement.

6. A collar shaper, comprising an ironing member, a collar form member, a hand operated device for moving one of said members into ironing position and in a fixed orbit during the ironing operation, and means for normally forcing the other of said members into ironing engagement with said first named member.

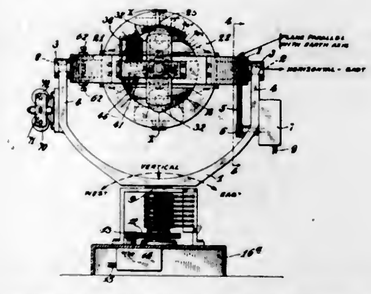


1,380,332. SUPPORT FOR REINFORCING-BARS. STEPHEN L. HEIDRICH, Brooklyn, N. Y. Filed Dec. 31, 1919. Serial No. 348,571. 1 Claim. (Cl. 72—122.)

A reinforcing bar support constructed of a single piece of wire and consisting of a semi-circular seat, downwardly diverging supporting legs therefor, and curved spacing elements connecting several of the legs, the terminals of

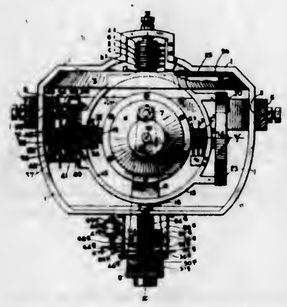
the wire being bent on each side, contiguous with and shaped in conformity with the seat.

1,380,333. SURVEYING INSTRUMENT. JERMAN ROSALES, New York, N. Y. Filed Apr. 8, 1920. Serial No. 372,123. 11 Claims. (Cl. 33—46.)



1. In combination, a tube and a disk pivotally mounted in said tube and having two slots therein at right angles to each other, said disk having movement about two axes which are at right angles to each other.

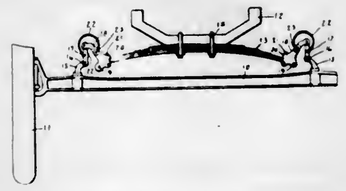
1,380,334. PROCESS FOR TREATING MEAL OR FLOUR AND MILLING PRODUCTS. EGBERT CORNELIS SUTHERLAND, Deventer, Netherlands, assignor to Naamlooze Vennootschap Industrieele Maatschappij voorheen Noury & van der Lande, Deventer, Netherlands, a Corporation of Netherlands. Filed Dec. 12, 1916. Serial No. 136,551. 17 Claims. (Cl. 83—42.)



1. A process of treating flour, meal, and milling products, which comprises mixing the product with a reagent containing as its essential constituent, a peroxid compound, and decomposing said compound while mixed with said product, under conditions capable of producing active oxygen in contact therewith, and while maintaining substantially the normal consistency of said product.

1,380,335. GYROSCOPIC DEVICE AND METHOD. CLIFFORD M. PAXTON, Brooklyn, N. Y., assignor to Paxton Gyroscope Corporation, a Corporation of New York. Filed Oct. 29, 1920. Serial No. 420,372. 43 Claims. (Cl. 33—204.)

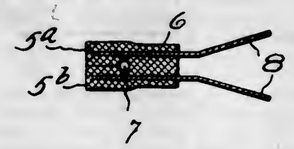
1. The method of enabling a freely mounted gyro to maintain its spinning axis approximately in a fixed-direction celestial meridian plane, which method consists in applying counter-torque, to obviate the effects of earth torque, as regards tendency to rotate the gyro axis in the plane of earth spin, and as regards tendency to cause precession at right angles to said plane.



1,380,336. GYROSCOPIC DEVICE AND METHOD. CLIFFORD M. PAXTON, Brooklyn, N. Y., assignor to Paxton Gyroscope Corporation, a Corporation of New York. Filed Nov. 26, 1920. Serial No. 426,600½. 24 Claims. (Cl. 33—204.)

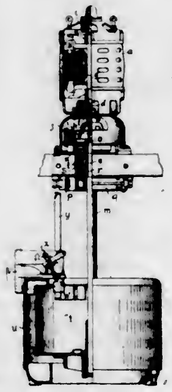
1. The method of modifying the effect of a slowly applied torque on a direction-indicating gyro, which method consists in actively and suddenly applying, continuing and removing relatively great, non-positive stresses in the same direction with said torque, and then in the opposite direction, alternately.

REISSUES.



15,113. SHOCK-ABSORBER. GEORGE G. F. BOSWELL, Indianapolis, Ind. Filed Sept. 3, 1919. Serial No. 321,463. Original No. 1,242,316, dated Oct. 9, 1917, Serial No. 135,782, filed Dec. 8, 1916. 9 Claims. (Cl. 267—19.)

9. The combination with the axle of a vehicle, a semi-elliptical main spring for the vehicle, and a rigid upwardly-extending supporting member secured near each end of the axle, of a member adapted to pivotally support the end of the main spring, pivot bars for supporting one end of said spring-supporting member upon and at a point higher than said rigid supporting member, yielding means tending to resist movement of said spring-supporting member under the influence of a load on said main spring, and means for adjusting the position of the main spring-supporting means with reference to the main spring and said pivot bars with reference to their rigid supporting means.

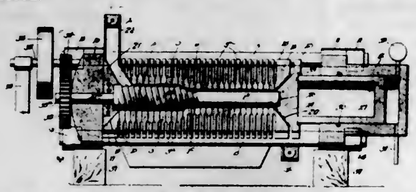


15,114. METHOD OF REGULATING SOUND-BOX REPRODUCTION. EMIL GRUENFELDT, Cleveland, Ohio. Filed Jan. 17, 1921. Serial No. 438,007. Original No. 1,170,530, dated Feb. 8, 1916, Serial No. 1,239, filed Jan. 8, 1915. 2 Claims. (Cl. 274—27.)

1. The method of regulating the reproduction of sound from a sound box, which consists in adjustably engaging with the needle arm of said sound box, between its point of connection with the diaphragm and its point of connection with said sound box, a mass of yieldable material and supporting said regulating mass solely by said needle arm and effecting the reproduction desired by utilizing the weight and yieldability of said mass and moving the same to and fro along said needle arm.

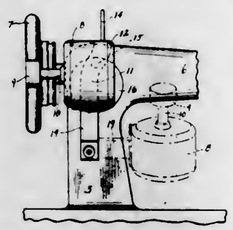
2. The method of regulating the reproduction of sound from a sound box, which consists in adjustably engaging with the needle arm of a sound box, between its point of connection with the diaphragm and its point of connection with the sound box, a regulating mass of sound deadening material and supporting said regulating mass solely by said needle arm and effecting the reproduction desired by utilizing the weight of said mass and moving the same to and fro along the needle arm.

15,115. METHOD OF DRIVING ELECTRIC CENTRIFUGAL MACHINES. EDWARD D. MACKINTOSH, deceased, Brooklyn, N. Y., by S. S. Hepworth Company, New York, N. Y., a Corporation of New York, and Edith M. Mackintosh, Brooklyn, N. Y., assignees. Filed Mar. 2, 1921. Serial No. 449,225. Original No. 1,342,405, dated June 1, 1920, Serial No. 262,051, filed Nov. 11, 1918. 6 Claims. (Cl. 210—72.)



1. A centrifugal machine comprising a multispeed electric motor, a centrifugal basket or the like, a friction clutch drive connection between the motor and the basket, the low speed drive of the motor exceeding a proper unloading speed, in combination with an unloader serving by its drag on the material in the basket to cause the friction clutch to slip and thus to reduce the speed of the basket to one suitable for unloading, substantially as described.

15,116. OIL-EXTRACTING APPARATUS. FRED STRICKLAND, Anderson, S. C. Filed Jan. 26, 1918. Serial No. 214,028. Original No. 1,233,930, dated July 17, 1917, Serial No. 120,861, filed Sept. 18, 1916. 8 Claims. (Cl. 100—48.)



1. A press for the purpose specified comprising a spirally grooved compressor which is circular in cross section, and a body surrounding said compressor which is formed of a series of plates having thickened hub portions and reduced or thinner outer portions, the hubs having ducts leading outward from the compressor into

the space between the outer portions of the plates as described.

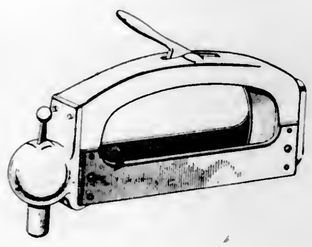
7. In a press of the character described, the combination of a compressor formed of two lengthwise cylindrical portions differing in diameter, and an intermediate tapering portion by which they are connected, the larger and tapered portions having a spiral feed groove, a body surrounding said compressor, and fitting it throughout its larger diameter and tapering portion, but having a narrow annular space around the smooth portion of smaller diameter and extending beyond the end of said smaller portion, means for laterally discharging the expressed oil from said body, means connected to said compressor at the end of greatest diameter for supporting and driving it, a closure for the discharge end of said body and the small end of said compressor, and means for applying constant pressure to said closure tending to close the discharge.

15,117. MOTOR-SUPPORT FOR SEWING-MACHINES. WILLIAM O. TAYLOR, Montreal, Quebec, Canada. Filed Jan. 13, 1920. Serial No. 351,249. Original No. 1,308,456, dated July 1, 1919, Serial No. 262,236, filed Nov. 12, 1918. 3 Claims. (Cl. 248—30.)

1. In combination with a sewing machine head having a driving wheel and a spool support at the upper portion thereof, of an electric motor having a friction wheel adapted to engage the drive wheel, and a supporting bracket for said motor comprising a member adapted to extend over the spool support and engage the same, a portion extending downwardly at the side of the sewing machine head, and a member connecting the motor with said downwardly extending portion in such a manner that said portion is normally held away from the sewing machine head by reason of engagement of the friction wheel with the driving wheel.

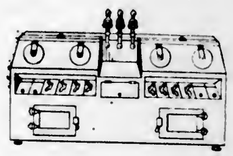
DESIGNS.

58,008. FINGER-RING. FRANK AMATI, Trenton, N. J. Filed May 8, 1920. Serial No. 379,982. Term of patent 14 years.



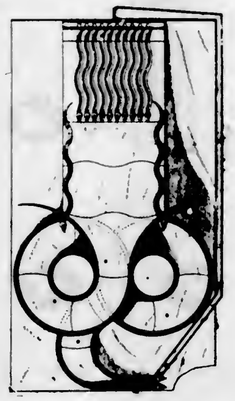
The ornamental design for a finger ring as shown.

58,009. FLYTRAP. JAN BAJ and LUCI MARCINIAK, Port Chester, N. Y. Filed Sept. 29, 1920. Serial No. 413,623. Term of patent 7 years.



The ornamental design for a flytrap as shown.

58,010. FRAME FOR A CLOTHES-WRINGER. HARRY O. BARTLETT, Washington, D. C., assignor to Bowers & Bartlett, Inc., Washington, D. C., a Corporation of Maryland. Filed Aug. 16, 1920. Serial No. 403,961. Term of patent 14 years.



The ornamental design for a frame for a clothes wringer, as shown.

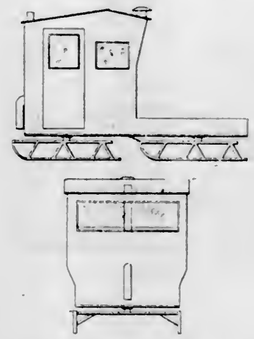
58,011. SODA-FOUNTAIN AND ICE-CREAM-DISPENSING APPARATUS. WILLIAM FRANKLIN BEATTY, Cincinnati, Ohio. Filed Mar. 22, 1920. Serial No. 367,885. Term of patent 14 years.

The ornamental design for a soda-fountain and ice-cream dispensing apparatus, as shown.

58,012. GAME. HENRY M. BECKER, Hartford, Conn. Filed Feb. 1, 1921. Serial No. 441,677. Term of patent 14 years.

The ornamental design for a game, as shown.

58,013. LAMP-SHADE. DOROTHY L. BEVAN, San Francisco, Calif. Filed Oct. 7, 1920. Serial No. 415,456. Term of patent 14 years.



The ornamental design for a lamp shade substantially as shown.

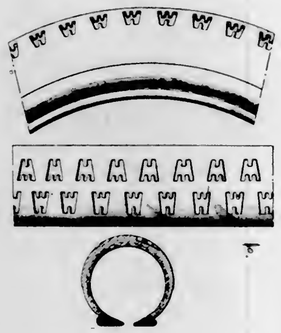
58,014. BOTTLE-HOLDER. WILLIAM T. BRADSHAW and ARTHUR J. BOND, Oakland, Calif. Filed Oct. 25, 1920. Serial No. 419,229. Term of patent 14 years.

The ornamental design for a bottle holder as shown.

58,015. SLED. VICTOR T. BROBERG, Luck, Wis. Filed Aug. 13, 1920. Serial No. 403,406. Term of patent 7 years.

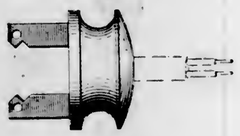
The ornamental design for a sled, as shown.

58,016. RAIL-BOND TERMINAL. JOHN ROWLAND BROWN, Cleveland, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Aug. 9, 1920. Serial No. 402,441. Term of patent 14 years.



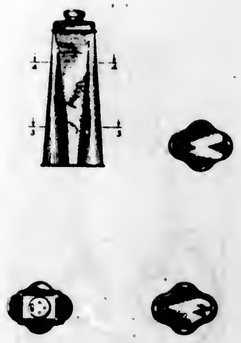
The ornamental design for a rail bond terminal as shown.

58,017. AUTOMOBILE-TIRE. WILLIAM A. BRUBAKER, Akron, Ohio, assignor to Nu-Cord Rubber Company, Greensburg, Pa. Filed June 12, 1920. Serial No. 388,652. Term of patent 7 years.



The ornamental design for an automobile tire substantially as shown.

58,018. VEHICLE TIRE OR CASING. EDWARD L. CAMPBELL, Winona, Minn., assignor to The J. R. Watkins Company, Winona, Minn., a Corporation of Minnesota. Filed Nov. 10, 1920. Serial No. 423,193. Term of patent 14 years.

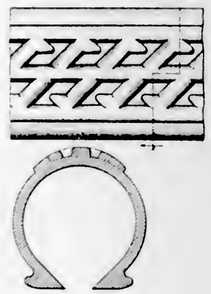


The ornamental design for a vehicle tire or casing, substantially as shown.

58,019. RECEPTACLE-PLUG. PAUL R. COLLIER, Philadelphia, Pa. Filed Sept. 30, 1920. Serial No. 413,922. Term of patent 7 years.

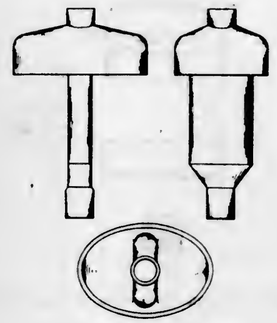
The ornamental design for a receptacle plug substantially as shown.

58,020. SIFTER-TOP CAN OR SIMILAR RECEPTACLE. MARTHA HALOWELL CONNOR, Baltimore, Md., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Apr. 8, 1921. Serial No. 459,561. Term of patent 14 years.



The ornamental design for a sifter top can or similar receptacle, as shown.

58,021. WATCHCASE OR LOCKET. JOSEPH DAVING, New York, N. Y. Filed May 31, 1918. Serial No. 237,645. Term of patent 3½ years.



The ornamental design for a watchcase or locket as shown.

58,022. ELASTIC VEHICLE-TIRE. DAYTON A. DOYLE, Jr., Akron, Ohio. Filed May 21, 1920. Serial No. 383,290. Term of patent 14 years.

The ornamental design for an elastic vehicle tire as shown.

58,023. PREHEATING-CHAMBER FOR DOMESTIC BOILERS. LEO V. GELDER, Oakland, Calif. Filed July 19, 1920. Serial No. 397,515. Term of patent 7 years.

The ornamental design for a preheating chamber for domestic boilers, as shown.

58,024. KNIFE AND FORK CLEANER. JACOB J. GOTTFRIED, Brooklyn, N. Y. Filed Dec. 3, 1920. Serial No. 428,134. Term of patent 3½ years.

The ornamental design for a knife and fork cleaner, as shown.

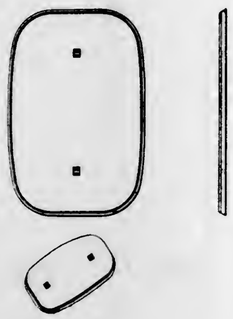
58,025. LINGERIE-CLASP. CHARLES G. HULTMAN, Providence, R. I. Filed Dec. 8, 1920. Serial No. 429,292. Term of patent 3½ years.

The ornamental design for a lingerie clasp, as shown.

58,026. SIFTER-TOP FOR A POWDER-CAN OR SIMILAR RECEPTACLE. CLEN S. HUMPHREY, Brooklyn, N. Y. Filed Sept. 25, 1920. Serial No. 412,868. Term of patent 14 years.

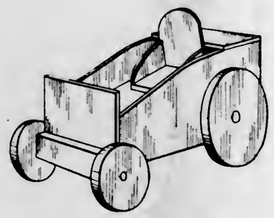
An ornamental design for a sifter top for a powder can or similar receptacle, substantially as shown.

58,027. COMBINATION LAMP-STAND AND SMOKING SET. SIDNEY M. ISRAEL, Richmond Hill, N. Y. Filed Nov. 19, 1920. Serial No. 425,281. Term of patent 7 years.



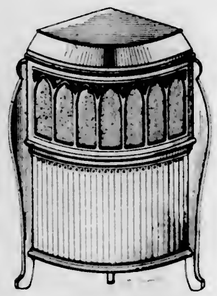
The ornamental design for a combination lamp stand and smoking set as shown.

58,028. COMBINATION LAMP-STAND AND SMOKING SET. SIDNEY M. ISRAEL, Richmond Hill, N. Y. Filed Nov. 19, 1920. Serial No. 425,282. Term of patent 7 years.



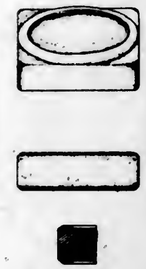
The ornamental design for a combination lamp stand and smoking set as shown.

58,029. SERVING-TRAY WARMER. WILLIAM C. JURGENS, Oakland, Calif. Filed July 19, 1920. Serial No. 397,506. Term of patent 14 years.



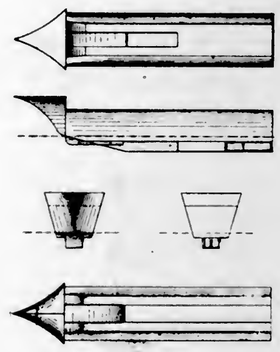
The ornamental design for a serving tray warmer.

58,030. DOLL-WAGON. CHARLES J. KERN, Buffalo, N. Y., assignor to New Era Toy Manufacturing Company, Inc., Cherry Creek, N. Y., a Corporation of New York. Filed Nov. 20, 1920. Serial No. 425,563. Term of patent 7 years.



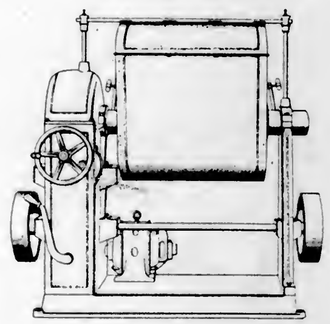
The ornamental design for a doll-wagon, as shown.

58,031. PHONOGRAPH-CABINET. HENRY KNAUB, Richmond, Va. Filed Jan. 19, 1921. Serial No. 438,451. Term of patent 14 years.



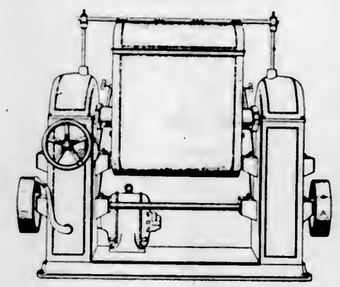
The ornamental design for a phonograph cabinet as shown.

58,032. CAKE OF SOAP. ARTHUR C. LANG, Chicago, Ill., assignor to The N. K. Fairbank Company, Chicago, Ill., a Corporation of New Jersey. Filed May 20, 1920. Serial No. 382,989. Term of patent 14 years.



The ornamental design for a cake of soap as shown.

58,033. BOAT-HULL. JOHN E. LANGSTAFF, Brooklyn, N. Y. Filed Apr. 23, 1920. Serial No. 376,152. Term of patent 14 years.

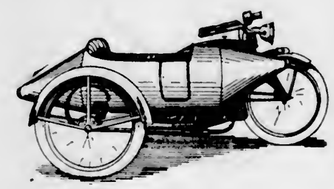


The ornamental design for a boat-hull substantially as shown.

58,034. DOUGH-MIXER. FRANK X. LAUTERBUR, Sidney, Ohio. Filed Oct. 6, 1919. Serial No. 328,911. Term of patent 14 years.

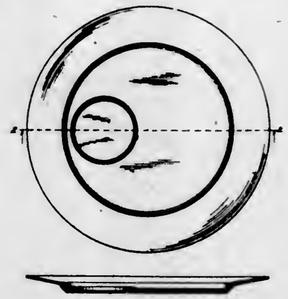
The ornamental design for a dough mixer, as shown.

58,035. DOUGH-MIXER. FRANK X. LAUTERBUR, Sidney, Ohio. Filed Oct. 6, 1919. Serial No. 328,912. Term of patent 14 years.



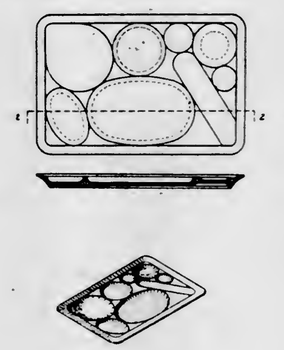
The ornamental design for a dough mixer, as shown.

58,036. TOY GLIDER. WILLIAM F. LEBZELTER, Elizabethtown, Pa., assignor to The Century Manufacturing Company, Inc., Elizabethtown, Pa., a Corporation of Delaware. Filed Jan. 21, 1921. Serial No. 439,026. Term of patent 3½ years.



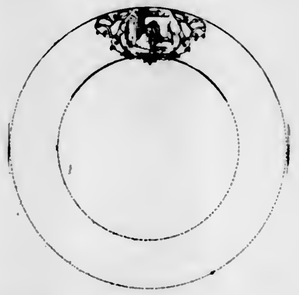
The ornamental design for a toy glider, as shown.

58,037. SIDE CAR FOR MOTORCYCLES. ONÉSIME LEMIEUX and GEORGE LIBOIRON, Montreal, Quebec, Canada. Filed Oct. 12, 1920. Serial No. 416,556. Term of patent 3½ years.



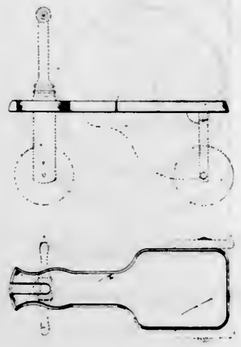
The ornamental design for a side car for motorcycles as shown.

58,038. REFRESHMENT-PLATE. MARGARET MCINERNEY, Los Angeles, Calif. Filed Aug. 5, 1920. Serial No. 401,526. Term of patent 7 years.



The ornamental design for a refreshment plate as shown.

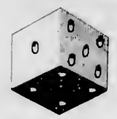
58,039. DINNER-PLATE. EMIL J. MEISSNER, West Hoboken, N. J. Filed Oct. 1, 1920. Serial No. 414,122. Term of patent 7 years.



The ornamental design for a dinner plate as shown.

58,040. PLATE OR SIMILAR ARTICLE. SAMUEL I. MORLEY, Sebring, Ohio, assignor to The Sebring Pottery Company, Sebring, Ohio, a Corporation of Ohio. Filed Nov. 10, 1920. Serial No. 423,190. Term of patent 3½ years.

The ornamental design for a plate or similar article, substantially as shown.



58,041. SEAT-BODY FOR CHILDREN'S VEHICLES. HARRY G. NORWOOD, Baltimore, Md., assignor to William Andrew Fuld, Baltimore, Md. Filed Oct. 8, 1920. Serial No. 415,704. Term of patent 14 years.

The ornamental design for a seat body for children's vehicles as shown.

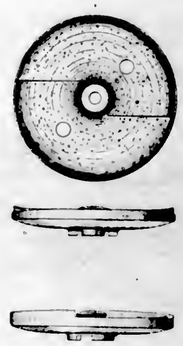
58,042. CONFECTIONERY OR CHEWING-GUM UNIT. GEORGE HEBARD PAINE, Rockville Center, N. Y. Filed May 17, 1920. Serial No. 382,184. Term of patent 14 years.

The ornamental design for a confectionery or chewing gum unit as shown.

58,043. STAPLE. NIELS PETER PLOUGMANN, Laurel, Nebr. Filed Nov. 10, 1919. Serial No. 337,030. Term of patent 7 years.

The ornamental design for a staple, as shown.

58,044. LAMP. RALPH W. POE, Canton, Ill. Filed June 19, 1920. Serial No. 390,261. Term of patent 7 years.

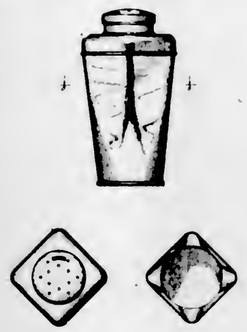


The ornamental design for a lamp as shown.

58,045. EMBLEM OR BADGE. ANNIE M. POND, New York, N. Y., assignor to Order of the Eastern Star State of New York, New York, N. Y., a Corporation of New York. Filed Aug. 5, 1920. Serial No. 401,519. Term of patent 14 years.

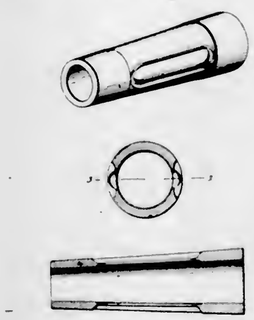
The ornamental design for an emblem or badge, as shown.

58,046. VEGETABLE-PEELING DISK. CHARLES F. SMITH, Chicago, Ill., assignor to Maxim Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed July 22, 1920. Serial No. 398,323. Term of patent 14 years.



The ornamental design for a vegetable peeling disk as shown.

58,047. SELF-ILLUMINATING PENDANT. THEODORE C. SMITH, Philadelphia, Pa. Filed Oct. 28, 1919. Serial No. 334,093. Term of patent 14 years.



The ornamental design for a self illuminating pendant as shown.

ORKID

Particular description of goods.—Printing, Writing, Cover, and Bond Paper for Wrapping, Writing, and Printing Purposes.
Claims use since February, 1902.

Ser. No. 124,726. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) MOLINE CHEMICAL COMPANY, Moline, Ill. Filed Nov. 10, 1919.

C-it

Particular description of goods.—A Non-Greasy Granulated Chemical Cleanser for Softening Water and for Cleaning Woven Material or Metal, Wood, or Composition Objects and Surfaces.
Claims use since July 10, 1919.

Ser. No. 125,149. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) GEORGE H. BUGENHAGEN, Minot, N. D. Filed Nov. 21, 1919.

THE PAL SWING

No claim is made to the word "Swing," apart from the other features of the trade-mark.
Particular description of goods.—Lawn-Swings.
Claims use since Oct. 21, 1919.

Ser. No. 125,884. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) GRAY-JUERGENS CO., Cincinnati, Ohio. Filed Dec. 12, 1919.

ZEM-ZEM

Particular description of goods.—Non-Alcoholic, Non-Intoxicating, Maltless, Non-Cereal Beverage Sold as a Soft Drink and Syrup for Making the Same.
Claims use since Sept. 9, 1919.

Ser. No. 125,890. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) HAMMOND STANDISH & CO., Detroit, Mich. Filed Dec. 12, 1919.

GREENFIELD BRAND

No claim is made to the word "Brand" apart from the mark shown on the drawing.
Particular description of goods.—Breakfast-Sausages.
Claims use since 1880.

Ser. No. 126,607. (CLASS 17. TOBACCO PRODUCTS.) WALKER-MATTESON COMPANY, Joliet, Ill. Filed Dec. 29, 1919.

Armory

Particular description of goods.—Cigars.
Claims use since Jan. 1, 1912.

Ser. No. 127,624. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) UNITED DRUG COMPANY, Boston, Mass. Filed Jan. 26, 1920.

Ambassador

Particular description of goods.—Candy.
Claims use since November, 1913.

Ser. No. 127,703. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) STUART PRODUCTS CORPORATION, Chicago, Ill. Filed Jan. 28, 1920.

The picture or illustration is fanciful. The lines in the drawing are intended to indicate shading and have no reference to color.
Particular description of goods.—Electric Batteries.
Claims use since on or about the 1st day of November, 1918.

Ser. No. 128,774. (CLASS 36. MUSICAL INSTRUMENTS, AND SUPPLIES.) FILMUSIC COMPANY, Los Angeles, Calif. Filed Feb. 24, 1920.

POP ROLL

Particular description of goods.—Perforated Music Rolls or Sheets for Use With Mechanical Player Instruments.
Claims use since December, 1918.

Ser. No. 129,504. (CLASS 32. FURNITURE AND UPHOLSTERY.) THE L. E. PALMER CO., Middletown, Conn. Filed Mar. 10, 1920.

Particular description of goods.—Couch-Hammocks.
Claims use since Jan. 1, 1915.

Ser. No. 129,753. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) MRS. FLORENCE STEWART, Glencoe, Ill. Filed Mar. 15, 1920.

Madame Florence

No claim is made to the representation of a spoon apart from the mark shown in the drawing.
Particular description of goods.—Silver-Polish.
Claims use since July 3, 1919.

Ser. No. 129,772. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MRS. ALBERTA BATTS, Detroit, Mich. Filed Mar. 16, 1920.

ORELIO NO. 1

Particular description of goods.—A Hair-Tonic and a Preparation to Straighten and Give Life to Obstinate Hair.
Claims use since June 1, 1915.

Ser. No. 129,842. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) MAX L. GOLDBERT, New York, N. Y. Filed Mar. 17, 1920.

La Belle

Particular description of goods.—Sound Recording or Reproducing Machines, Phonographs, Talking-Machines, Parts Thereof, Sound-Records, Sound-Boxes, and Needles for Talking-Machines and Phonographs.
Claims use since about Nov. 1, 1919.

Ser. No. 130,583. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) JERRY FAPPIANO, Waterbury, Conn. Filed Apr. 3, 1920.

A SUPERB PRODUCT FOR LADIES CHILDREN MEN'S SHOES. Fappiano's SHOE POLISH MADE BY J. FAPPIANO FOR ALL LEATHER DRESSING PURPOSES.

Consists of the circle-inclosed surname "Fappiano's" in applicant's own handwriting, no claim being made by this applicant to any of the remaining matter appearing in worded form on the drawing forming a part hereof.

RUFFEND

Particular description of goods.—Chocolates.
Claims use since Apr. 28, 1920.

Ser. No. 136,230. (CLASS 17. TOBACCO PRODUCTS.) COMMONWEALTH CIGAR CO., St. Louis, Mo. Filed Aug. 18, 1920.

TRIPLE C.C.C.

Particular description of goods.—Cigars.
Claims use since May 24, 1920.

Ser. No. 136,678. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) HENRY A. GARDNER, Washington, D. C. Filed Aug. 31, 1920.

GARDOL

Particular description of goods.—Dechlorinated Oils, with or without Resin Additions.
Claims use since Aug. 19, 1920.

Ser. No. 136,934. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) CHATHAM BOTTLING COMPANY, Savannah, Ga. Filed Sept. 8, 1920.

TRY-ME

Particular description of goods.—Non-Alcoholic, Maltless Beverages Sold as Soft Drinks.
Claims use since Dec. 1, 1918.

Ser. No. 137,244. (CLASS 39. CLOTHING.) ISIDORE SALMONSON, Los Angeles, Calif. Filed Sept. 15, 1920.

STAG

Particular description of goods.—Puttees of Leather and Canvas.
Claims use since June 1, 1920.

Ser. No. 137,256. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) THE E. C. MANUFACTURING COMPANY, Elkhart, Ind. Filed Sept. 16, 1920.

ALL FYRE

Particular description of goods.—Spark-Plugs for Ignition Systems for Internal-Combustion Engines.
Claims use since Sept. 2, 1920.

Ser. No. 137,419. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) KNIGHT ENGINEERING & SALES CO., Los Angeles, Calif. Filed Sept. 21, 1920.

ONE-HAND-Y

Particular description of goods.—Electric Hand-Drills.
Claims use since on or about Aug. 25, 1920.

Ser. No. 137,710. (CLASS 37. PAPER AND STATIONERY.) THE PEERLESS PAPER COMPANY, Dayton, Ohio. Filed Sept. 28, 1920.

AERO

Particular description of goods.—Ledger-Paper.
Claims use since March, 1918.

Ser. No. 137,805. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) IDA R. COOK, St. Louis, Mo. Filed Oct. 1, 1920.

ROSLYND

Particular description of goods.—Cold-Cream, Vanishing Cream, Rouge, and Foot-Relief in Form of a Massage-Cream.
Claims use since November, 1912.

Ser. No. 137,867. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) THE VOLTAX COMPANY, Bridgeport, Conn. Filed Oct. 2, 1920.

"MILL-WHITEST"

Particular description of goods.—Ready-Mixed Paints and Paint Enamels.
Claims use since on or about Jan. 8, 1920.

Ser. No. 137,868. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) THE VOLTAX COMPANY, Bridgeport, Conn. Filed Oct. 2, 1920.

"FLAT WHITEST"

Particular description of goods.—Ready-Mixed Paints and Paint Enamels.
Claims use since on or about Jan. 8, 1920.

Ser. No. 137,896. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) SCHIBI SPRING BREWING CO., St. Charles, Mo. Filed Oct. 4, 1920.

CONTENTS 10 FLUID OZ.
SERVE SAYSO COLD
ROOT BEER
Invigorating Refreshing
MADE BY
SAYSO BEVERAGES
ST. CHARLES, MO.

All words shown on the drawing except "Sayso" are disclaimed apart from the mark shown on the drawing.
Particular description of goods.—Root-Beer.
Claims use since Nov. 1, 1919.

Ser. No. 137,899. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) WRIGHT & WRIGHT, INC., Boston, Mass. Filed Oct. 4, 1920.

ALLWEATHER

Particular description of goods.—Leather Grips for Golf-Sticks, Tennis-Racket Handles, and Squash-Racket Handles.
Claims use since Mar. 1, 1920.

Ser. No. 137,962. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) REMIEN & KUHNERT CO., Chicago, Ill. Filed Oct. 5, 1920.

FLOOROLEUM

Particular description of goods.—Floor-Varnish.
Claims use since May 1, 1907.

Ser. No. 137,993. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) W. H. BAGSHAW CO., Lowell, Mass. Filed Oct. 6, 1920.

TRIO-TONE

Particular description of goods.—Phonographic Needles.
Claims use since June 23, 1920.

Ser. No. 138,042. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) BRADLEY & VROOMAN COMPANY, Chicago, Ill. Filed Oct. 7, 1920.

Permalac

Particular description of goods.—Ready-Mixed Paints, Varnishes, Stains, and Enamel Paints.
Claims use since Jan. 1, 1906.

Ser. No. 138,116. (CLASS 48. MALT BEVERAGES, EXTRACTS, AND LIQUORS.) YE OLDEN TIMES CO., New York, N. Y. Filed Oct. 8, 1920.

REFERENDUM

Particular description of goods.—Malt Extracts.
Claims use since September, 1919.

Ser. No. 138,120. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) THE BEAVER VARNISH CO., INC., Buffalo, N. Y. Filed Oct. 9, 1920.

BEAVER

Particular description of goods.—Mixed Paints in Oil, Enamels, Varnishes, Waterproof Coatings, Japans, Stains, Lacquers, Fillers, and Colors in Oil.
Claims use since June 1, 1917.

Ser. No. 138,136. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) F. O. PIERCE COMPANY, New York, N. Y. Filed Oct. 9, 1920.

EMALINE

Particular description of goods.—Bituminous Rubber Paint.
Claims use since Aug. 14, 1920.

Ser. No. 138,172. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE MOTHER'S REMEDIES COMPANY, Chicago, Ill. Filed Oct. 11, 1920.

MOTHER'S SALVE
MOTHER'S REMEDY

No claim is made to the exclusive use of the words "Salve" and "Remedy" appearing on the drawing. The picture appearing on the drawing is fanciful.
Particular description of goods.—Certain Ointment for External Application in the Treatment of Inflammation and Congestion of Parts of the Human Body.
Claims use since 1893.

Ser. No. 138,267. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) THE SANGTOY COMPANY, Grand Rapids, Mich. Filed Oct. 13, 1920.

SANGTOY

Particular description of goods.—Musical Stringed Instruments Played by a Bow.
Claims use since Apr. 1, 1920.

Ser. No. 138,281. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) L. J. CHRISTOPHER CO., Los Angeles, Calif. Filed Oct. 14, 1920.

The Ambassador

Particular description of goods.—Candies and Chocolates.
Claims use since Sept. 1, 1920.

Ser. No. 138,291. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MEYER BROTHERS DRUG COMPANY, St. Louis, Mo. Filed Oct. 14, 1920.

MEYER

In the drawing the diamond-shape design comprising a part of the mark is lined for red, indicating a red coloration in a display thereof. No claim is made to the words "St. Louis" apart from the mark shown by the drawing.
Particular description of goods.—Merchandise of the Following Particular Description: Alteratives, Analgesics, Anaphrodisiacs, Anesthetics, Anodynes, Antacids, Anthelmintics, Antichlorotics, Antimetics, Antiepileptics, Antigalactagogues, Antigonorrheics, Antihidrotics, Antilithics, Antineuralgics, Antiparasitics, Antiperiodics, Antiphlogistics, Antipyretics, Antirheumatics, Antisialagogues, Antispasmodics, Antizymotics, Aperients, Aphrodisiacs, Astringents, Cardiac Sedatives, Cardiac Stimulants, Carminatives, Cathartics, Cerebral Depressants and Stimulants, Cholagogues, Constructives, Counter-Irritants, Demulcents, Deodorants, Deoxidizers, Depilatories, Depressants, Diaphoretics, Digestives, Discutients, Disinfectants, Diuretics, Ecbolics, Emetics, Emmenagogues, Errhines, Escharotics, Expectorants, Galactagogues, Gastric Tonics, Hemostatics, Hypnotics, Irritants, Laxatives, Motor-Depressants, Motor-Excitants, Mydriatics, Myotics, Narcotics, Nervines, Nutrients for Medicinal Purposes, Oxytocics, Ptyalagogues, Purgatives, Pustulants; Refrigerants, (Medicinal;) Resolvents, Respiratory Depressants, Respiratory Stimulants, Restoratives, Rubefacients, Sedatives, Sialagogues, Soporifics, Sternutatories; Stimulants, (Cardiac, Cerebral, Hepatic;) Stomachics, Styptics, Sudorifics, Tæniafuges, General Tonics, Vasoconstrictors, Vasodilators, Vascular Sedatives, Vermicides, Vesicants; Chemicals and Drugs—Namely, the Following: Acacia, Acetanilid, Acetone, Acetphenetidin: Acids—Namely, Acetic, Acetic Anhydrid, Glacial Acetic, Acetylsalicylic, Arsenious, Arsenic Trioxid, Benzoic, Boric, Carbolic, Chromic, Citric, Gallic, Hydriodic, Hydrobromic, Hydrochloric, Hydrofluoric, Hypophosphorous, Lactic, Molybdic, Nitric, Nitrohydrochloric, Oleic, Oxalic, Phosphoric, Glacial Phosphoric, Phosphotungstic, Pyrogallic, Salicylic, Stearic, Sulfuric; Sulfuric, Aromatic; Sulfurous, Tannic, Tartaric, Trichloracetic; Aconite, Aconitin Crystals; Alcohol, De-

hydrated; Alcohol, Methyl; Allspice (Pimenta) for Medicinal Purposes, Aloes, Aloin, Althæa, Aluminum Compounds—Namely, the Following: Alum; Ammonium: Alum, Exsiccated; Alum, Chrome; Alum, Ferric; Aluminum Acetate, Aluminum Nitrate, Aluminum Sulfate; Ammonia and Ammonium Compounds—Namely, Ammonia-Water; Ammonium Benzoate, Bromid, Carbonate, Chlorid, Chromate, Citrate, Hypophosphite, Iodid, Molybdate, Nitrate, Oxalate, Persulfate, Phosphate, Salicylate, Sulfate, Sulfocyanate, Tartrate, Valerate; Amyl Acetate, Amyl Nitrite, Amylopsin, Anise; Antidote, Arsenic; Antimony and Potassium Tartrate, Antiphrin, Aqua Ammoniæ, Arnica-Flowers and Arnica-Root, Aromatized Castor-Oil, Arsenic Iodid, Aspirin, Atropin, Atropin Sulfate, Baking-Powder, Balsam Peru, Balsam Tolu; Barium Compounds—Namely, Barium Acetate, Carbonate, Chlorid, Dioxid, Hydroxid, Nitrate, Sulfate; Belladonna, Benzaldehyde, Benzoin; Benzol, (Benzene; Benzonaphthol, Beta-Naphthol, Beta-Naphthol Benzoate; Bismuth Compounds—Namely, Bismuth Milk; Bismuth Citrate, Nitrate, Oxid, Oxychlorid, Oxyiodid, Subcarbonate, Subgallate, Subnitrate, Subsalicylate: Bismuth and Ammonium Citrate; Bloodroot, Borax, Bromid Compound, Buchu, Burow's Solution, Cacao-Butter for Medicinal Purposes, Cadmium Iodid, Cadmium Nitrate, Cadmium and Potassium Iodid, Cadmium Sulfate, Caffein, Caffein Benzonate; Caffein, Citrated; Caffein Hydrobromid, Caffein and Sodium Benzonate, Caffein and Sodium Salicylate; Calcium Compounds—Namely, Calcium Acetate, Bromid, Carbonate, Chlorid, Glycerophosphate, Hypophosphite, Lactate, Lactophosphate, Oxid, Phenolsulfonate, Phosphate, Sulfid; Calendula, Calisaya-Bark, Calomel, Calumba, Camphor; Camphor, Monobromated; Cantharides, Capsicum, Carbon Disulfid, Carbon Tetrachlorid, Cardamom, Cardamom Compound, Cascara Sagrada, Caustic Potash, Caustic Soda, Cerium Oxalate; Chalk, Precipitated; Chamomile, Charcoal; Chloral, Camphorated; Chloral, Hydrated; Chloramin T, Chlorosane, Chlorinated Eucalyptol, Chloroform, Cinchona, Cinchona Compound; Cinchona, Red; Cinchonidin, Cinchonidin Salicylate, Cinchonidin Sulfate, Cinchonin, Cinchonin Sulfate, Cinnamon, Cassia, Cloves for Medicinal Purposes, Cobalt Chlorid, Cobalt Nitrate, Cocain and Cocain Salts, Cochineal, Codein and Codein Salts, Colchicin, Cold-Cream, Collodion, Confection Senna, Copper Acetate, Copper Sulfate, Corrosive Sublimate; Creosote, (Wood;) Creosote Carbonate, Cresol, Cubeb, Cudbear, Diacetylmorphin, Diastase from Malt, Diastase from Pancreas, Dichloramin T, Digitalin, Digitalis, Digitoxin, Epsom Salts, Ergot, Eriodictyon, Ether; Ether, Acetic; Ethyl Bromid, Ethyl Chlorid, Eucalyptol, Eucalyptus, Eugenol, Fennell, Cascara Compound, Ferruginous Tablets, Food Allergens, Foxglove, Gentian, Gentian Compounds, Ginger for Medicinal Purposes, Glycerin, Glycerites; Glycyrrhiza, (Licorice-Root;) Gold Chlorid, Gold and Sodium Chlorid, Guaiac Resin, Guaiacol Carbonate, Gum-Arabic, Gum-Benjamin, Halazone Tablets; Hellebore, American; Hemoglobin, Henbane, Hexamethyleneamin, Hydrastin, Hydrastin Hydrochlorid, Hydrogen Peroxid, Hyoscyamus, Hypodermic Tablets, Iodin, Iodoform, Ipecac; Iron and Iron Compounds—Namely, Iron, Reduced; Iron Albuminate, Arsenate, Cacodylate, Carbonate; Carbonate, Saccharated; Chlorid, Ferric; Ferrocyanid, Glycerophosphate, Hydroxid with Magnesium Oxid, Hypophosphite, Lactophosphate; Oxid, Red, Saccharated; Peptonate, Peptonate with Manganese, Phenolsulfate, Phosphate, Pyrophosphate, Subcarbonate, Subsulfate, Sulfate, Iron and Ammonium Citrate, Iron and Ammonium Sulfate, Iron and Ammonium Tartrate, Iron and Manganese Peptonate, Iron and Potassium Tartrate, Iron and Quinin Citrate; Iron, Quinin, and Strychnin Citrate; Iron and Strychnin Citrate, Jalap; Kaolin, Medicinal; Kaolin Poultice, Krameria, Lanolin; Lard, Benzoinated; Larkspur, Laudanum, Lavender Compound, Lead Acetate, Lead Carbonate, Lead Nitrate, Lead Oxid, Lead Peroxid, Leucocyte, Licorice, Lime for Medicinal Purposes; Lime, Chlorinated; Lime, Hydrated; Lime, Sulfureted; Liquid Petroleum for Medicinal Purposes, Used Both Internally and Externally; Lithia Tablets, Lithium Benzoate, Lithium Bromid, Lithium Carbonate, Lithium Citrate; Lithium Glycerophosphate, Lithium Salicylate, Lithium Tartrate, Litmus-Paper, Lobelia, Lupulin, Magma Bismuth, Magma Magnesia; Magnesium Compounds—Namely, Magnesia; Magnesium Carbonate, Chlorid, Citrate, Glycerophosphate, Hypophosphite, Phosphate, Salicylate, Sulfate; Magnesium and Ammonium Phosphate; Manganese Compounds—Namely, Manganese Chlorid, Citrate, Dioxid, Glycerophosphate, Hypophosphite, Oxid, Sulfate; Marigold, Matricaria, Menthol; Mercury and Mercury Compounds—Namely, Mercury; Mercury, Ammoniated; Mercury Bromid, Chlorid, Iodid, Oleate, Oxid, Salicylate, Subsulfate, Sulfid, Tannate; Mercury and Ammonium Chlorid, Mercury with Chalk, Methyl Acetate, Methyl Salicylate, Methylthionin, Milk of Bismuth, Milk of Magnesia, Morphin, Morphin Salts, Mustard for Medicinal Purposes, Myrrh, Nickel Nitrate, Nickel Sulfate, Nickel and Ammonium Sulfate, Spirit of Nitroglycerin, Nutmeg for Medicinal Purposes, Nux Vomica, Oil Betula, Oil Bitter Almond; Oil, Camphorated; Oil, Castor; Oil, Castor, Aromatized; Oil, Cod-Liver; Oil, Ethereal; Oil Peppermint for Medicinal Purposes, Oil Theobroma, Oleoresin Capsicum, Oleoresin Cubeb, Oleoresin Ginger, Oleoresin Male Fern, Ophthalmic Tablets, Opium, Opodeldoc, Orange-Peel for Medicinal Purposes, Ox-Gall, Pancreatin, Paprika for Medicinal Purposes, Paraldehyde, Paregoric, Pareira, Pepper for Medicinal Purposes; Pepsin, Saccharated; Peptone, Peptonizing-Powder, Peptonizing-Tubes; Petrolatum, Liquid; Phenazone, Phenolphthalein; Phenyl Salicylate, (Salol;) Phenylacetamid; Physostigmin, (Eserin;) Physostigmin Salicylate, Physostigmin Sulfate, Pilocarpin Hydrochlorid; Pilocarpus, (Jaborandi;) Pimenta, Podophyllin; Potassium Compounds—Namely, Potassa, Sulfureted; Potassium Acetate, Benzoate, Bicarbonate, Binoxalate, Bisulfate, Bitartrate, Bromate, Bromid, Carbonate, Chlorate, Chlorid, Chromate, Citrate, Dichromate, Ferricyanid, Ferrocyanid, Glycerophosphate, Hydroxid, Hypophosphite, Iodid, Nitrate, Oxalate, Permanganate, Persulfate, Phenolsulfonate, Phosphate, Sulfate, Sulfid, Sulfocarbolate, Sulfocyanate, Tartrate; Potassium and Sodium Tartrate; Protargentum, Pyrogallol, Quinin; Quinin Salts—Namely, Quinin Bisulfate, Dihydrochlorid, Glycerophosphate, Hydrobromid, Hydrochlorid, Hypophosphite, Phosphate, Salicylate, Sulfate, Tannate, Valerate; Quinin and Urea Hydrochlorid, Rennin, Resin Jalap, Resin Podophyllum, Resin Scammony, Resorcinol, Rhatany, Rhubarb for Medicinal Purposes and Applies to the Root Tincture for Fruit Extract and other Preparations of the Root, Rubefacine, Saccharin, Salol; Salt Carlsbad, Artificial; Salt, Kissingen, Artificial; Salt, Vichy, Artificial; Sanguinaria, Santonin, Scopolamin, Hydrobromid, Seidlitz-Powder, Senna; Silver, Colloidal; Silver Nitrate, Silver Protein; Sodium Compounds—Namely, Sodium Acetate, Acid Phosphate, Arsenate, Arsenite, Benzoate, Bicarbonate, Biphosphate, Bisulfate, Bisulfite, Bitartrate, Borate, Bromid, Cacodylate, Carbonate, Chlorate, Chlorid, Citrate, Cyanid, Glycerophosphate, Glycerocholate, Hydroxid, Hypophosphite, Iodid, Nitrate, Nitrite, Nitroprussid, Oxalate, Phenolsulfonate, Phosphate, Phosphate Compound, Pyrosphosphate, Salicylate, Sulfate, Sulfite, Tartrate, Thiosulfate; Sodium and Ammonium Phosphate, Solargentum, Spartein Sulfate, Squill; Strontium Compounds—Namely, Strontium Acetate, Arsenite, Bromid, Chlorid, Iodid, Lactate, Nitrate, Salicylate; Strophanthin, Strychnin Salts and Compounds, Sulfonethylmethane, Sulfonmethane, Sulfur, Suppositories, Suprarenals, Tartar Emetic, Terpin Hydrate, Theobromin, Theobromin and Sodium Salicylate, Thiosinamin, Thromboplastin, Thymol, Thymol Iodid; Thyroid Glands, Dried; Tin Chlorid, Stannous; Toluol, (Toluene;) Tragacanth, Trifolium Compound, Uranium Acetate and Nitrate, Urease, Valerian, Vanillin, Veratrum Viride, White-Pine Bark, White-Pine Compound, Wild Cherry, Yerba Santa; Zinc Compounds—Namely, Zinc Acetate, Bromid, Carbonate, Chlorid, Iodid, Oxid, Phenolsulfonate, Stearate, Sulfate, Sulfid, Valerate; Biological Products—Namely, the Following: Antitoxins, Serums, Bacterial Vaccins, Smallpox-Virus, Antirabic Vaccin, Leucocyte Extracts, Veterinary Products, Emetic, Ophthalmic Mallein, Mallein Solution, and Prepared in Any One or Another

of the Following Forms: Ampuls, Crude Drugs, Crystals, Elixirs, Extracts, Gases, Liquids, Lozenges, Mixtures, Ointments, Powders, Serums, Solids, Solutions, Spirits, Syrups, Tablets, Tinctures, Troches, and Vaccins.
Claims use since Jan. 2, 1919.

Ser. No. 138,295. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) NOXAL POLISH MANUFACTURING COMPANY, Philadelphia, Pa. Filed Oct. 14, 1920.

NOXAL

NOXAL

Particular description of Goods.—Polish for Automobiles, Pianos, Victrolas, Furniture, and All Enameled and Varnished Surfaces.
Claims use since Feb. 18, 1920.

Ser. No. 138,458. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) SANT CHEMICAL CO., Kansas City, Mo. Filed Oct. 18, 1920.

SANT

Particular description of goods.—A Powder Preparation for Cleaning Artificial Teeth.
Claims use since Aug. 1, 1920.

Ser. No. 138,750. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) ALFRED H. BURT, Buffalo, N. Y. Filed Oct. 25, 1920.

PIPPIN

Particular description of goods.—Candy, Peanuts, and Popcorn.
Claims use since September, 1914.

Ser. No. 138,789. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THOMAS BIGG, LIMITED, London, England. Filed Oct. 25, 1920.

Thomas Bigg

The drawing shows a facsimile of the signature of Thomas Bigg.
Particular description of goods.—Chemicals Used in Preparations for the Destruction of Insect Life, Especially for External Application upon Animals, Fruit-Trees and other Trees, and Generally upon all other Forms of Insect Life Wherever They Abound.
Claims use since Oct. 1, 1912.

Ser. No. 138,790. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THOMAS BIGG, LIMITED, London, England. Filed Oct. 25, 1920.

No claim is made herein to the exclusive use of the words "Renowned Preparation" apart from the trade-mark shown.
Particular description of goods.—Chemicals Used in Preparations for the Destruction of Insect Life, Especially for External Application upon Animals, Fruit-Trees and other Trees, and Generally upon All other Forms of Insect Life Wherever They Abound.
Claims use since Oct. 1, 1919.

Ser. No. 138,854. (CLASS 15. OILS AND GREASES.) E. F. HOUGHTON & CO., Philadelphia, Pa. Filed Oct. 27, 1920.

VITSOL

Particular description of goods.—Metal-Cutting Oils.
Claims use since about Sept. 9, 1920.

Ser. No. 139,036. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) GIBSON COMMERCIAL CO., Salt Lake City, Utah. Filed Nov. 1, 1920.

CUVANO

Particular description of goods.—Flavoring-Vanilla, a Fluid Extract Used to Flavor Food.
Claims use since Oct. 1, 1919.

Ser. No. 139,175. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) ALFRED H. SMITH COMPANY, New York, N. Y. Filed Nov. 4, 1920.

DIJER-KISS

The same being colored gold.
Particular description of goods.—Soaps.
Claims use since Nov. 1, 1903.

Ser. No. 139,321. (CLASS 15. OILS AND GREASES.) SINCLAIR REFINING COMPANY, Chicago, Ill. Filed Nov. 6, 1920.

HI-PO-DISTAL

Particular description of goods.—Petroleum Products Used as a Fuel for Automobiles, Gas Motors, and Engines.
Claims use since Aug. 8, 1919.

Ser. No. 139,467. (CLASS 39. CLOTHING.) MORVAY & SON MANUFACTURING COMPANY, Bridgeton, N. J. Filed Nov. 10, 1920.

Particular description of goods.—Chemises, Camisoles, Bloomers, Nightgowns, Pantalettes, Ladies' Combination-Garments, and Underwear.
Claims use since June 1, 1920.

Ser. No. 139,527. (CLASS 27. HOROLOGICAL INSTRUMENTS.) B. GUTTER & SONS, New York, N. Y. Filed Nov. 11, 1920.

Entyme

Particular description of goods.—Watches, Watchcases, and Watch-Movements.
Claims use since Apr. 1, 1920.

Ser. No. 139,597. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) W. W. RYCROFT & Co., New York, N. Y. Filed Nov. 12, 1920.

TUSSAH CARINA

Particular description of goods.—All-Wool Dress Goods in the Piece.
Claims use since 1908.

Ser. No. 139,704. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ANTI-URIC COMPANY, San Francisco, Calif. Filed Nov. 16, 1920.

ANTI-URIC

No claim is made to the word "Anti-Uric" apart from the mark shown.
Particular description of goods.—Rheumatism Medicine.
Claims use since 1904.

Ser. No. 139,760. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ABRAHAM SALIKOF, Philadelphia, Pa. Filed Nov. 17, 1920.

SALKO

Particular description of goods.—Toilet Waters, Perfumes, Massage-Creams, and Shampoo Preparations.
Claims use since on or about May, 1919.

Ser. No. 139,807. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) DONATO MADDALONI, Plainfield, N. J. Filed Nov. 18, 1920.

Particular description of goods.—General Tonic.
Claims use since about July 29, 1920.

Ser. No. 139,835½. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) E. F. HOUGHTON & Co., Philadelphia, Pa. Filed Nov. 18, 1920.

SYN-OLIVE

No claim being made to the word "Olive" apart from the mark shown.
Particular description of goods.—Preparation of an Oily Nature for Treating Textile Fabrics.
Claims use since Nov. 10, 1920.

Ser. No. 139,836½. (CLASS 15. OILS AND GREASES.) E. F. HOUGHTON & Co., Philadelphia, Pa. Filed Nov. 18, 1920.

FRAPOL

Particular description of goods.—Metal-Cutting Oils.
Claims use since Nov. 5, 1920.

Ser. No. 139,990. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) ROUNDY, PECKHAM & DEXTER CO., Milwaukee, Wis. Filed Nov. 22, 1920. Under ten-year proviso.

RED CROSS

The cross is printed in red.
Particular description of goods.—Tea and Coffee.
Claims use since about Jan. 1, 1893, on tea and since about Aug. 1, 1884, on coffee.

Ser. No. 140,030. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) FRUIT DISTRIBUTORS SERVICE CO., INC., Chicago, Ill. Filed Nov. 23, 1920.

BRAND 4

No exclusive claim being made to the word "Brand" apart from the mark shown in the drawing.
Particular description of goods.—Cantaloups.
Claims use since Mar. 5, 1920.

Ser. No. 140,071. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SANITOL CHEMICAL LABORATORY CO., St. Louis, Mo. Filed Nov. 23, 1920.

SANITOL

Particular description of goods.—Face-Powder, Talcum Powder, Rouge, Face-Cream, Face-Lotion, Tooth-Powder, Tooth-Paste, Liquid Antiseptic, Hair-Tonic, Hair-Shampoo, and Eye-Bath.
Claims use since 1905.

Ser. No. 140,083. (CLASS 39. CLOTHING.) HARRY E. ADAMS, Haverhill, Mass. Filed Nov. 24, 1920.

FEDERATION

Particular description of goods.—Leather Shoes.
Claims use since Nov. 15, 1920.

Ser. No. 140,176. (CLASS 39. CLOTHING.) HAMILTON-BROWN SHOE COMPANY, St. Louis, Mo. Filed Nov. 26, 1920.

Commodore

Particular description of goods.—Men's and Boys' Leather Shoes.
Claims use since Apr. 22, 1919.

Ser. No. 140,220. (CLASS 39. CLOTHING.) THE UNITED TURKEY RED COMPANY LIMITED, Glasgow, Scotland. Filed Nov. 26, 1920.

WOLSCOT

Particular description of goods.—Knitted, Wool, Silk, or Cotton, or Wool and Silk, or Cotton, or Silk and Cotton Outer Garments—viz., Coats, Dresses, Headwear, Skirts, Gloves, Hosiery, Children's Overalls, and Bedroom-Slippers; Also Garments Made of the Same Material—viz., Underwear for Men, Women, and Children; Work, Negligée, and Dress Shirts, and Blouses.
Claims use since Mar. 16, 1920.

Ser. No. 140,280. (CLASS 42. KNITTED, NETTED AND TEXTILE FABRICS.) MARSHALL FIELD & COMPANY, Chicago, Ill. Filed Nov. 27, 1920.

COTTON FIELD

Particular description of goods.—Piece Goods—Namely, Cotton Duck.
Claims use since Jan. 4, 1918.

Ser. No. 140,328. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) HEYERS & VANRIPER, Bloomfield, N. J. Filed Nov. 27, 1920.

O. K. KILLEM ON THE SPOT

Consisting of the letters and words "O. K. Killem on the Spot," no claim being made to the exclusive use of the words "Killem on the Spot."
Particular description of goods.—Insecticide.
Claims use since Oct. 16, 1920.

Ser. No. 140,335. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) WILLIAM F. KUHLBACH, Fort Wayne, Ind. Filed Nov. 27, 1920.

VICTORIA

The facsimile signature being that of the applicant.
Particular description of goods.—A General Tonic Made from Root, Herb, and Berry Extract.
Claims use since Mar. 13, 1919.

Ser. No. 140,432. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NON-METALLIC TIRES.) DUNLOP TIRE AND RUBBER CORPORATION OF AMERICA, Tonawanda, N. Y. Filed Nov. 30, 1920. Under ten-year proviso.

DUNLOP

Particular description of goods.—Rubber Tires and Parts Thereof—Namely, Tubes, Shoes, and Casings.
Claims use since 1893.

Ser. No. 140,533. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) KAFFIR CHEMICAL LABORATORIES, Omaha, Nebr. Filed Dec. 2, 1920.

Applicant disclaims all the wording occurring on the drawing, with the exception of the word "Dentlo."
Particular description of goods.—Tooth-Paste.
Claims use since May 15, 1920.

Ser. No. 140,583. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) W. B. BOND & Co., Newark, N. J. Filed Dec. 4, 1920

WILSON'S
Porto - Pepto - Beef

Particular description of goods.—General Tonic.
Claims use since September, 1920.

Ser. No. 140,732. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) WILLIAM J. KELLEHER, Toronto, Ontario, Canada. Filed Dec. 7, 1920.

The portrait forming part of the mark being that of Joseph MacKay. The right to the exclusive use of the carton-blank apart from other features of the mark is disclaimed.
Particular description of goods.—Butter-Scotch Candy.
Claims use since Apr. 19, 1920.

Ser. No. 140,767. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) AMBOY PRODUCTS CO., Chicago, Ill. Filed Dec. 8, 1920.

CEL-O-MINT

Particular description of goods.—Chewing-Gum.
Claims use since Jan. 2, 1919.

Ser. No. 140,796. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) WALTER HASSLINGER, Baltimore, Md. Filed Dec. 8, 1920.

The horizontal lines upon the representation of the ribbon are intended to represent the color blue. The diagonal lines upon the words "Hasslinger's Blue Ribbon Sea Food" are intended to represent the color green. The words "Sea Food" upon the drawing are disclaimed.
Particular description of goods.—Fresh Live and Steamed Hard Crabs, Fresh Live Soft Crabs, Fresh Crab-Meat, Fresh Crab Cakes, Fresh Deviled Crabs, Fresh Raw Clams, Fresh Raw and Steamed Shrimp, and Fresh Oysters, None of the Above Being Subjected to a Preserving Process.
Claims use since July 13, 1920.

Ser. No. 140,829. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ISAAC J. EPSTEIN, San Francisco, Calif. Filed Dec. 9, 1920.

Epco

Particular description of goods.—Cold-Caps for the Treatment of Colds in the Head, La Grippe, Hay-Fever, Coryza, Influenza and Neuralgia Pains, and for the Treatment of All Forms of Coughs, Colds, Hoarseness, Bronchitis, and Loss of Voice; Cold-Cream; Cough-Balsam for Treatment of Coughs, Colds, and All Bronchial and Laryngeal Affections; Lax for the Treatment of Constipation and Biliousness; Liquid Antiheadache Remedy for Treatment of Headaches, Neuralgia, and Vertigo; Bandoline, and Prophylactic Tubes.
Claims use since Nov. 1, 1919.

Ser. No. 140,832. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) FITZPATRICK BROS., Chicago, Ill. Filed Dec. 9, 1920. Under ten-year proviso.

SUPERIOR

Particular description of goods.—Soap.
Claims use since January, 1895.

Ser. No. 140,901. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CLARISSA LIZZIE RILEY, Canton, Miss. Filed Dec. 10, 1920.

Magna

Particular description of goods.—Hair-Tonic.
Claims use since July 1, 1920.

Ser. No. 140,905. (CLASS 48. MALT BEVERAGES, EXTRACTS, AND LIQUORS.) THE WANDER COMPANY, Chicago, Ill. Filed Dec. 10, 1920.

PANOMALT

Particular description of goods.—Malt Extract.
Claims use since Mar. 1, 1920.

Ser. No. 141,001. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) LUCRETIA BENTLEY KERLIN, Chester, Pa. Filed Dec. 13, 1920.

The portrait shown in the drawing being that of the applicant.
Particular description of goods.—Bentley's Greaseless Cream, Strawberry Crême, Scalp-Pomade, Beauty-Powder, Almond-Meal, Face-Powder, Depilatory, Vegetable Cream, Hair-Tonic, Dry Shampoo, Bust-Developer, Toilet Water, Eyebrow-Grower, Sweet-Violet Extract, Pimple-Ointment.
Claims use since 1897.

Ser. No. 141,030. (CLASS 15. OILS AND GREASES.) SINCLAIR REFINING COMPANY, Chicago, Ill. Filed Dec. 13, 1920.

DIAMOND C.

Particular description of goods.—Lubricating-Oils.
Claims use since Jan. 25, 1917.

Ser. No. 141,032. (CLASS 15. OILS AND GREASES.) SINCLAIR REFINING COMPANY, Chicago, Ill. Filed Dec. 13, 1920.

ONYX

Particular description of goods.—Lubricating Oils and Greases.
Claims use since May 1, 1919.

Ser. No. 141,033. (CLASS 15. OILS AND GREASES.) SINCLAIR REFINING COMPANY, Chicago, Ill. Filed Dec. 13, 1920.

SPIN-KNIT

Particular description of goods.—Lubricating-Oil.
Claims use since May 1, 1919.

Ser. No. 141,034. (CLASS 15. OILS AND GREASES.) SINCLAIR REFINING COMPANY, Chicago, Ill. Filed Dec. 13, 1920.

SUPERFLAME

Particular description of goods.—Kerosene.
Claims use since Nov. 1, 1919.

Ser. No. 141,188. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JUSTO J. RODRIGUEZ, Scranton, Pa. Filed Dec. 16, 1920.

Société

Particular description of goods.—Face-Powders, Face-Creams, Face-Powder Compacts, and Perfumes.
Claims use since Aug. 18, 1920.

Ser. No. 141,190. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE RESTICIDE COMPANY, Cleveland, Ohio. Filed Dec. 16, 1920.

RUST-I-CIDE

Particular description of goods.—A Chemical Preparation for Removing Rust.
Claims use since Oct. 8, 1920.

Ser. No. 141,203. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE TWITCHELL-CHAMPLIN COMPANY, Portland, Me., and Boston, Mass. Filed Dec. 17, 1920.

Applicant disclaims the word "Brand" and the expression "Portland, Me., & Boston, Mass."

Particular description of goods.—Cream Tartar, Baking-Soda, Sulfur, and Epsom Salts.

Claims use since 1883.

Ser. No. 141,219. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) Mrs. K. G. ELLIS, Beaumont, Tex. Filed Dec. 17, 1920.

S. K. Gardner.

The name appearing therein being a facsimile of the signature of the applicant.

Particular description of goods.—A Medicine for the Treatment of the Kidneys and Bladder.

Claims use since Aug. 1, 1920.

Ser. No. 141,223. (CLASS 15. OILS AND GREASES.) E. F. HOUGHTON & Co., Philadelphia, Pa. Filed Dec. 17, 1920.

COSMOLUBRIC

Particular description of goods.—Lubricating-Oils.

Claims use since 1870.

Ser. No. 141,224. (CLASS 15. OILS AND GREASES.) E. F. HOUGHTON & Co., Philadelphia, Pa. Filed Dec. 17, 1920.

HYDROLUBRIC

Particular description of goods.—Lubricating-Oils for Hydraulic Systems.

Claims use since about 1905.

Ser. No. 141,225. (CLASS 15. OILS AND GREASES.) E. F. HOUGHTON & Co., Philadelphia, Pa. Filed Dec. 17, 1920.

HOUGHTOLARD

Particular description of goods.—Metal-Cutting Oils.

Claims use since about 1906.

Ser. No. 141,244. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) DAVID C. SMITH, Schenectady, N. Y. Filed Dec. 17, 1920.

RADOLENE

Particular description of goods.—A Paint Withstanding High Temperature.

Claims use since September, 1920.

Ser. No. 141,269. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) INDUSTRIAL COTTON OIL PROPERTIES, Boston, Mass. Filed Dec. 18, 1920.

LONGHORN

Particular description of goods.—Cotton-Seed Meal.

Claims use since Mar. 17, 1920.

Ser. No. 141,270. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) EARL KENT, Tacoma, Wash. Filed Dec. 18, 1920.

SWEET BRIAR

Consisting of the words "Sweet Briar."

Particular description of goods.—Butter.

Claims use since Oct. 23, 1920.

Ser. No. 141,312. (CLASS 12. CONSTRUCTION MATERIALS.) HASSAM PAVING COMPANY, Worcester, Mass. Filed Dec. 20, 1920.

Particular description of goods.—Street-Pavements and Bituminous Paving Materials.

Claims use since about Oct. 1, 1920.

Ser. No. 141,334. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SHEPHERD DRAIN, M. D., Baltimore, Md. Filed Dec. 20, 1920.

Sen Pru
CUT PLUG

Particular description of goods.—A Remedy for Constipation.

Claims use since June 1, 1920.

Ser. No. 141,374. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) ITEN BISCUIT CO., Clinton, Iowa. Filed Dec. 21, 1920.

AVALON

Particular description of goods.—Cakes.

Claims use since Dec. 6, 1920.

Ser. No. 141,401. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) SILVEY AND GOLLIDAY, Eldon, Mo. Filed Dec. 21, 1920.

RESTORO

Particular description of goods.—A Rug-Cleaner.

Claims use since September, 1920.

Ser. No. 141,539. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CHARLES EZERSKIS, Chicago, Ill. Filed Dec. 27, 1920.

The portrait shown is that of the applicant.

Particular description of goods.—A Medicine Used in the Treatment of Rheumatism.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

DECISIONS OF THE U. S. COURTS.

Court of Appeals of the District of Columbia.

BALL *v.* BARNHURST *et al.*

Decided February 7, 1921.

1. PATENTS—EVIDENCE—ADMISSION BY FORMER ATTORNEY PERSUASIVE AGAINST CLIENT.
An admission in an interference proceeding that the adversary's exhibit illustrated the subject-matter of the issue, made by a former attorney, if not conclusively binding upon the client, is very persuasive in determining whether the Commissioner's decision that the adversary had disclosed the invention in issue should be affirmed.

2. SAME—CONCURRENT FINDING OF OFFICE TRIBUNALS NOT REVERSED UNLESS MANIFESTLY WRONG.
Where the three tribunals of the Patent Office are in accord upon a question of fact, the Commissioner's decision will not be disturbed on appeal unless it is clearly wrong.

3. SAME—INTERFERENCE—FAILURE TO FILE MOTION TO DISSOLVE—RIGHT TO ARGUE AT FINAL HEARING RIGHT TO MAKE CLAIMS.
Where a party to interference proceedings did not file a motion to dissolve in accordance with Rule 122, he is not entitled, under Rule 130, to contend that his adversary cannot make the claims, unless he shows good reasons why he failed to file a motion.

4. SAME—RELIANCE ON OTHER GROUND HELD NOT EXCUSE FOR FAILURE TO MOVE TO DISSOLVE.
Reliance by a party in interference proceedings on estoppel of his adversary, under a prior decision of the appellate court, which was subsequently reversed by the Supreme Court, does not excuse failure to move to dissolve the interference proceedings because the adversary is not entitled to make the claims.

Mr. Paul Synnestvedt and *Mr. H. L. Lechner* for Ball.

Mr. Dean S. Edmonds for Barnhurst *et al.*

SMYTH, *C. J.:*

This interference relates to an apparatus for burning pulverized fuel in boiler-furnaces. Ball is the senior party, having filed in August, 1913, while the appellees, whom we shall refer to herein as Barnhurst, did not file until March, 1914. A patent issued to Ball while the applications were copending. Ball took no testimony and is therefore restricted to his filing date. The three tribunals of the Patent Office concurred in holding that Barnhurst conceived the invention as early as July, 1913. It was stipulated by the parties that there was no lack of diligence on his part between that date and the date on which he filed his application. Consequently he was awarded priority.

Ball planted his case before the Examiner of Interferences and the Examiners-in-Chief on the assumption that Barnhurst, not having made his claims in time, was estopped under the ruling in *Wintroath* v. *Chapman*, (47 App. D. C., 428; 252 U. S., 126.) The first tribunal held against him but was reversed by the second one. When the matter came before the Commissioner on appeal he withheld action until the Supreme Court of the United States disposed of the Wintroath case. That case was reversed and thereby the basis for Ball's argument that Barnhurst was estopped was removed.

Ball then took the position that Barnhurst had not disclosed the invention in issue. The Commissioner pointed out that Ball in his brief before the Examiner of Interferences admitted that Barnhurst's Exhibit 4 which was made prior to Ball's filing date, illustrated "the subject-matter of the issue." Ball does not deny the admission, but says it was made by a former attorney, and that he should not be bound by it. Even if we should hold that it was not conclusively binding upon him, we think it must be treated as very persuasive in determining whether or not we should reverse the Office. It indicates at least that one of Barnhurst's attorneys is in harmony with the decision of the three tribunals of the Patent Office. The Commissioner held that Barnhurst's Exhibit 4 did disclose the invention, and, Ball's other contentions being out of the way, awarded Barnhurst priority.

We have repeatedly ruled that where, as here, the three tribunals of the Patent Office are in accord upon a question of fact, we will not disturb the Commissioner's decision unless it is clearly wrong, (*Hopkins* v. *Riegger*, 49 App. D. C., 188; *Greenawalt* v. *Dwight*, 49 App. D. C., 82,) which it is not in this case.

Furthermore, the argument now made on behalf of Ball is to the effect that Barnhurst cannot make the claims. Ball did not file a motion to dissolve in accordance with Rule 122, and where this is not done, Rule 130 says that a party shall not be entitled to raise the question unless he shows good reasons why he failed to file a motion. He says he relied on the ruling in *Wintroath* v. *Chapman* to defeat his opponent; but the fact that he might have great confidence in the strength of one point is no excuse for failing to raise all points available to him. This is the only excuse he offers for his default, but it is not sufficient. His contention could

have been rejected on that ground, but the Commissioner saw fit to rule upon it, and we are satisfied with his decision.

Affirmed.

Court of Appeals of the District of Columbia.

LAUGHLIN v. BURRY.

Decided February 7, 1921.

1. PATENTS—DISCLOSURE BY JUNIOR PARTY TO SENIOR PARTY.

In an interference proceeding in the Patent Office involving an invention relating to side bearings for railroad-cars evidence *Held* to show that the junior party disclosed the invention to the senior party in connection with negotiations with the senior party's employer and subsequent assignee.

2. SAME—PARTY DISCLOSING GENERIC IDEA ENTITLED TO GENERIC CLAIMS.

Where the junior party to an interference proceeding involving side bearings for railroad-cars had disclosed to the senior party an embodiment of the generic claims of the issue, he was entitled to the broad generic claims and not limited to any specific form or arrangement.

3. SAME—CONCEPTION BY EMPLOYER AND DISCLOSURE TO EMPLOYEE—EMPLOYER ENTITLED TO RESULT.

Where one conceives an invention and employs another to work out the details of the general conception, the result belongs to the employer.

4. SAME—INVENTOR BY OBTAINING LICENSE FROM PATENTEE NOT ESTOPPED TO ASSERT RIGHTS.

Where a party to an interference proceeding, before the corporation of which he was president obtained a license to manufacture the device covered by the other party's patent, had taken steps to apply for a patent, the license did not estop him from claiming the invention, but was justifiable for the protection of his interests.

5. SAME—CONCURRENT DECISIONS IN FAVOR OF SAME PARTY NOT CONCLUSIVE WHEN NOT CONCURRING ON FACTS OR CONCLUSIONS.

The rule that the court will hesitate to disturb concurrent decisions of the Patent Office does not apply where they did not agree on the facts or the conclusions to be drawn therefrom, though all awarded priority to the same party.

6. SAME—DELAY IN APPLYING FOR PATENT UNTIL AFTER GRANT TO ANOTHER HELD TO CREATE NO UNFAVORABLE PRESUMPTION.

The delay of an inventor in applying for a patent until four months after the issue of the patent to another claimant of the invention created no presumption in favor of the patentee where the delay was due to an informal arrangement with the patentee's employer for joint ownership and as soon as it became apparent that the employer would not carry out the agreement he took steps to protect his rights and applied for a patent.

Mr. J. R. H. Potts and *Mr. B. G. Richards* for Laughlin.

Mr. R. D. Totten for Burry.

VAN ORSDELL, *J.*:

This appeal is from the decision of the Commissioner of Patents awarding priority of invention to appellee Burry for an invention relating to side bearings for railway-cars. The issue is in seven counts, of which the following are illustrative:

1. A bearing device comprising upper and lower housings or bearing plates vertically movable the one with relation to the other and having plain bearing faces, a plurality of rollers interposed between said plates and means on said plates and said rollers to maintain the rollers constantly spaced at the same distance apart and constantly centered with respect to the application of the load.

7. In a bearing device, the combination with upper and lower bearing plates vertically movable the one with relation to the other and having plain bearing faces forming runways and each having a slot arranged in a vertical plane, a pair of bearing rollers interposed between said bearing plates, said rollers being provided at the end with one or more lugs adapted to engage said slots, said slots being so formed as not to interfere with the rotation of said rollers, but to guide the same to centered position beneath the point of application of the load at all times, and also to maintain the rollers in substantially centered position when the car is tilted and the rollers are out of engagement with one or the other of said upper and lower bearing members.

The invention is described in the opinion of the Examiners-in-Chief as follows:

The invention relates to side bearings for railway cars and consists essentially in the provision of rollers having plain bearing faces, located between housing parts on the under side of the car body and upper side of the track, respectively, the rollers being provided with laterally extending trunnions which engage race-ways in side extensions of the housing. The race-ways are designed to cooperate with the trunnions to permit the lifting of the car body, as in rounding a curve, while at the same time maintaining the rollers properly spaced apart and centered with respect to the load.

The case turns largely upon the question of originality. Appellant Laughlin in November, 1914, was president of the Joliet Railway Supply Company of Chicago. He was thirty-five years old, and had been engaged for sixteen years in the manufacture and sale of railway supplies. He has obtained six patents on side bearings which have been in general use. Laughlin conceived the idea of inventing a car-mounting in which the load would be carried on side bearings. This he termed the side-bearing truck, as distinguished from a side bearing which only bears the load in emergencies. Laughlin took up the matter of the invention with Turner, superintendent of motive power for the Pittsburgh & Lake Erie Railroad Company, with headquarters at Pittsburgh. Turner appears here as the assignee of the Burry patent. Laughlin and Turner were on intimate business terms, growing out of the use of Laughlin's bearings by the Pittsburgh & Lake Erie Railroad.

Upon the invitation of Laughlin, Turner made a trip to Laughlin's home at Oregon, Ill., where the details of the present invention were discussed and an oral agreement entered into between Laughlin and Turner that they would share equally in the invention. It was then that Turner suggested to Laughlin that he had a young man by the name of Burry working under him as chief draftsman in the mechanical department of the Pittsburgh & Lake Erie Railroad, who could render valuable assistance in working out the details of the invention. As a result of this suggestion, Burry went to Chicago, and Laughlin laid before him his plans for developing the invention. Burry returned to Pittsburgh with Laughlin's drawings and certain models which Laughlin had prepared. Later, when Burry reached a point where he needed further assistance, he made a trip to Laughlin's home, where he spent several days with Laughlin in working upon the details of the invention. Burry returned to Pittsburgh, where bearings were constructed and placed upon the cars of the Pittsburgh & Lake Erie Railroad Company and tested out, which test demonstrated the complete success of the invention. Burry made application for a patent February 17, 1916, and a patent was issued thereon July 18, 1916.

When Laughlin began pressing Turner for a written contract setting forth their agreement as joint owners of the invention, his suspicions were first aroused that Turner was planning to appropriate the invention to his own benefit. It was then that he made application for the patent, which resulted in the present interference. The evidence in the case is somewhat complicated, but depends largely upon a long series of correspondence between Laughlin, Turner and Burry, which overwhelmingly establishes the contract between Turner and Laughlin and the fact that Burry was called in merely as an employee to help work out the details of the invention.

That Laughlin disclosed the invention to Burry at the meeting in Chicago, we think is clear. Blue-Print Exhibit 6, which Laughlin gave to Burry, disclosed all the elements of the issue, except that the lower surfaces of the rockers are shown to have teeth, whereas the issue calls for plain surfaces, both above and below. However, model rockers (Laughlin's Exhibits 1, 2 and 3), which Burry admits were explained to him in connection with Exhibit 6, show a plain surface at the top, the teeth at the bottom being removable, which would suggest the use of a smooth surface. This strongly corroborates Laughlin's testimony that they were so constructed in order that they could be tested both ways, and his testimony is to the effect that they were so tested. It is also significant that these rockers were provided with lugs or trunnions to cooperate with the side guides to prevent displacement.

Laughlin also testified that the use of the smooth surface was discussed at his meeting with Burry. While Burry denies this, it is inconceivable that Laughlin should have explained to Burry the rockers with removable teeth in connection with Exhibit 6, and made no reference to their use without the teeth. That this feature was discussed by them, as Laughlin testifies, is emphasized by the fact that Burry returned to Pittsburgh and immediately set about to work out the details of the invention with plain-surface bearings. It is also significant that Burry, in his preliminary statement, alleges that he conceived the invention in issue the first week in January, 1916, or a little over a week after the Chicago meeting, although admitting under oath that he had never invented anything before or since. All the circumstances corroborate Laughlin and refute Burry. It must also be remembered that the relation of employer and employee having been established, the burden shifts heavily upon Burry. (*Gedge* v. *Cromwell*, 19 App. D. C., 192; *Miller* v. *Kelly*, 18 App. D. C., 163.)

It is true that Laughlin's original conception, as disclosed by Burry, showed a slightly different arrangement of the side trunnions from that disclosed by Burry in his application for patent. But the issues broadly cover—

means on said plates and said rollers to maintain the rollers constantly spaced at the same distance apart and constantly centered with respect to the application of the load.

It is clear that Laughlin disclosed to Burry an embodiment of the generic claims of the issue. He is not, therefore, limited to any specific form or arrangement, but is entitled to the broad generic claims.

It is well settled that where one conceives an invention and employs another to work out the details of the general conception, the result belongs to the employer. (*Milton* v. *Kingsley*, 7 App. D. C., 531, 537; *Miller* v. *Kelly*, 18 App. D. C., 163, 170; *Gedge* v. *Cromwell*, 19 App. D. C., 192, 198; *Gallagher* v. *Hastings*, 21 App. D. C., 88, 99; *Flather* v. *Weber*, 21 App. D. C., 179; *Kreag* v. *Geen*, 28 App. D. C., 437.) In the Kreag case the court announced the rule as follows:

The relation of employer and employee once established, the law is well settled that when one conceives the principle or plan of an invention, and employs another to perfect the details and realize his conception, though the latter may make valuable improvements therein, such improved result belongs to the employer.

Much is attempted to be made of a license to manufacture the Burry bearing granted to Laughlin-Clark & Company on November 23, 1916. Laughlin was president of this corporation, and it is claimed that, in the light of this transaction, he is estopped from claiming the invention. It is not clear how the contract between Turner and Burry and this corporation can estop Laughlin from contesting Burry's right to the patent, especially in the light of the facts disclosed by the record. Laughlin filed his application four days after this contract was made. We may assume that the application had been in the hands of his attorneys at least since his discovery of Turner's duplicity, which date is fixed by a letter sent by Laughlin to Turner October 5, 1916, in which he states:

Your favor of the 3rd forwarded to me here, and I thank you for your frankness. I evidently have misunderstood the situation. It was always my understanding that whatever was developed in the way of a truck, from my suggestions to you and Mr. Burry, and whatever I developed from your suggestions, was to be "joint property," as between you and me. You have my written word to this effect.

Laughlin had already taken steps to protect his rights, and the contract thereafter entered into by the corporation in which he was interested could not be taken as an admission that he had no claim to the invention. This court, in *Winslow* v. *Austin*, (14 App. D. C., 137, 143,) considering the effect of an assignment of an interest in the Winslow patent to Austin, said:

On this state of the case, the Board of Examiners-in-Chief, on appeal to them, and the Commissioner of Patents, on appeal to him, appear to have had no difficulty in reaching the conclusion that Austin had fully made out his claim to priority of invention, and he was accordingly awarded such priority. The conclusion of the Examiner of Interferences was in favor of Winslow, but his conclusion was largely based upon the *prima facie* effect secured to Winslow by his position of senior party upon the record, and upon the fact of the assignment taken by Austin from Licht & Keeney of interest in the Winslow patent. And there is unquestionably considerable force in this latter fact. But this fact, we think, ought not to be taken as an admission on the part of Austin that he in reality and truth had no claim to the invention involved in the present issue, and that the sole and exclusive right as in-

ventor was in Winslow. As very properly said by the Examiner-in-Chief, he may have obtained the assignment as an easy way to quiet a contest, or in order to combine in himself all adverse claims to the contested invention.

It will be observed that, even if Laughlin had personally accepted a license under the Burry patent, it would only bring him squarely within the Winslow case. But the license was granted to a corporation in which Laughlin was interested, and the negotiations, as shown by the record, were carried on entirely by Clark, its vice-president. However, as in the Austin case, any interest that Laughlin may have acquired through this transaction was justifiable, inasmuch as he had the right to protect his interests by acquiring use of the patent to any extent that he might desire.

This is not a case where the court will hesitate to disturb the concurrent decisions of the Patent Office, since no two of them agree either upon the facts or the conclusions to be drawn therefrom. The Examiner of Interferences found that the distinguishing feature of the issue consists of—

bearing-plates vertically movable, the one with relation to the other, and having plain bearing surfaces;

that Burry was not in the employ of Laughlin; that, when Burry visited Laughlin, the disclosures made by Laughlin all showed bearing-surfaces with teeth, and that Laughlin's knowledge of Burry's license arrangement with Laughlin-Clark & Company estopped him from claiming the invention.

The Board of Examiners-in-Chief held that Burry was in the employ of Laughlin; that Laughlin disclosed to Burry vertically-movable bearing plates, both with and without plain bearing-surfaces; that Laughlin was not estopped by the license to Laughlin-Clark & Company, but that the distinguishing feature of the invention resided in the specific arrangement of the side trunnions and raceways as shown by Burry, and that, on this point alone, Burry was entitled to prevail.

The Commissioner held that Laughlin disclosed nothing to Burry that did not belong to the prior art; hence it was immaterial whether Burry was in Laughlin's employ or not; and that Laughlin's actions, after he discovered Burry had applied for a patent, were inconsistent with the claim of the existence of a fiduciary relation between them.

The delay of Laughlin in applying for a patent after Burry's patent was issued creates no presumption in Burry's favor or against Laughlin, since the correspondence discloses clearly that Laughlin was relying upon Turner to enter into a formal contract in pursuance of the oral agreement originally made between them, and, as soon as it became apparent to Laughlin that Turner would not carry out his agreement, he took steps to protect his rights through an application for patent. In any event, his application was made four months after the issue of the Burry patent, and this, considering the negotiations he was carrying on with Turner, cannot be held to be an unreasonable delay. It was Laughlin's reliance upon his agreement with Turner and his fiduciary relation with Burry that lulled him into inactivity during the period when Burry was securing his patent. As soon as Laughlin discovered the scope of Burry's patent, he at once insisted upon his rights, both under his agreement with Turner, and by taking steps to assert his claims in the Patent Office. The conspiracy of Turner and Burry to repudiate their contract and to appropriate to themselves the whole benefit to be derived from this valuable invention, cannot be employed by them to the disadvantage of their victim.

The improvement involved, in view of the prior art, is a narrow one, and consists, in our opinion, of a combination of the features specified, only in conjunction with plain bearing-surfaces. This is emphasized from the rejection of the Burry application until he limited his claim to plain bearing-surfaces. The conclusion, therefore, is irresistible that the distinguishing feature of the issue consists in the vertically-movable bearing-plates with plain bearing-surfaces; that this was broadly disclosed to Burry at his first meeting with Laughlin, and that whatever Burry did was merely ancillary in specifically carrying into effect the generic disclosure of his employer.

The decision of the Commissioner of Patents is reversed.

Reversed.

Adverse Decisions in Interference.

PATENT No. 1,154,929.

On May 9, 1921, a decision was rendered that Oscar M. Leich and Charles E. Hague were not the first inventors of the subject-matter covered by claims 2, 7, 8, 10, 11, 22, 23, and 27 of their Patent No. 1,154,929, subject, "Signaling system," and no appeal having been taken within the time allowed such decision has become final.

PATENT No. 1,306,380.

On May 24, 1921, a decision was rendered that Winthrop K. Howe was not the first inventor of the subject-matter covered by claims 1, 2, 6, 9, 10, 12, 13, and 15 of his Patent No. 1,306,380, subject, "Automatic train-control system," and no appeal having been taken within the time allowed such decision has become final.

PATENT No. 1,316,563.

On May 10, 1921, a decision was rendered that Henry John Edwards was not the first inventor of the subject-matter covered by claims 1, 2, 3, 7, and 8 of his Patent No. 1,316,563, subject, "Universal joint," and no appeal having been taken within the time allowed such decision has become final.

ALPHABETICAL LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED DURING THE MONTH OF MAY, 1921.

NOTE.—Arranged in accordance with the first significant character or word of the name. (In accordance with city and telephone directory practice.)

A/S Myrens Verksted. (See Elling, Jens W. A., assignor.)
Abbot, Charles G., Washington, D. C. Ordnance. No. 1,380,171; May 31; v. 286; p. 978.
Abbot, Charles G., Washington, D. C. Self-propelled projectile. No. 1,380,172; May 31; v. 286; p. 978.
Abbott, Adrian O., Jr. (See Holmes, R., and Abbott.)
Abbott, Scott M., Philadelphia, Pa. Adjustable bookmark. No. 1,380,031; May 31; v. 286; p. 951.
Abegg, Julius, West Hoboken, assignor to Gordon Pen Company, West New York, N. J. Stylographic pen. No. 1,379,602; May 31; v. 286; p. 871.
Abegg, Julius, assignor to Gordon Pen Company, West Hoboken, N. J. Stylographic pen. No. 1,379,603; May 31; v. 286; p. 871.
Abel, Arthur J., Brooklyn, N. Y. Attachment for internal-combustion engines. No. 1,380,173; May 31; v. 286; p. 978.
Åberg, Carl J., Stenstorp, Sweden. Machine for making macadamized roads. No. 1,377,302; May 10; v. 286; p. 232.
Abern, Halsey C., and F. J. Baivier, Racine, Wis. Side-draft eliminator. No. 1,379,074; May 24; v. 286; p. 696.
Abrahmsén, Carl H. V., Stockholm, Sweden. Apparatus for holding plates and the like during washing up and rinsing. No. 1,379,379; May 24; v. 286; p. 755.
Abram, Ira, Dugger, Ind. Means for building concrete structures. No. 1,376,911; May 3; v. 286; p. 101.
Abtmeyer, Theodore, Pittsburgh, Pa., assignor to Westinghouse Electric and Manufacturing Company. Percolator. No. 1,379,671; May 31; v. 286; p. 883.
Acheson, Edward G., Jr., Niagara Falls, N. Y. Preparing graphitized vulcanized fiber. No. 1,379,155; May 24; v. 286; p. 712.
Acheson, Edward G., Jr., Niagara Falls, N. Y. Preparing graphitized vulcanized fiber. No. 1,379,156; May 24; v. 286; p. 712.
Ackerland, Joseph, assignor to G. M. Seemann, Minneapolis, Minn. Windshield-shade. No. 1,378,509; May 17; v. 286; p. 516.
Ackerland, Joseph, assignor to G. M. Seemann, Minneapolis, Minn. Windshield-shade. No. 1,378,510; May 17; v. 286; p. 516.
Adam Hilger Limited. (See Twyman, F., and Wilson, assignors.)
Adam, Matthew A., J. Stevenson, and A. T. Mabbitt, London, England; said Stevenson and said Mabbitt assignors to said Adam. Detinning of tinned iron-scrap. No. 1,379,237; May 24; v. 286; v. 727.
Adams, Arthur J., assignor to The Fulton Company, Bay City, Mich. Perambulator. No. 1,379,295; May 24; v. 286; p. 738.
Adams, Ellis E. and E. C. Bennett, Roanoke, Va. Automatic train-stop. No. 1,377,955; May 10; v. 286; p. 359.
Adams, James R., Roanoke, Va. Lock for motor-vehicles. No. 1,378,308; May 17; v. 286; p. 477.
Adams-Williams Mfg. Corporation. (See Cunningham, William C., assignor.)
Adams-Williams Manufacturing Corporation. (See Williams, Charles D., assignor.)
Adamson, Allan A. (See Grupe, W. F., and Adamson.)
Adler, Frank H., Minneapolis, Minn. Windshield-cleaning composition. No. 1,378,931; May 24; v. 286; p. 670.
Adriance Machine Works. (See Calleson, Amos, assignor.)
Advance Manufacturing Company, The. (See Saborsky, Arthur D., assignor.)
Agnew, Paul G. (See Loomis, A. L., Klopsteg, Agnew, and Stannard.)
Agre, Carl S., Volga, S. D. Automatic grain-shocker. No. 1,380,285; May 31; v. 286; p. 999.
Ahl, Frank H. (See Parr, Albert, assignor.)
Ahlert, Ernest. (See Scholl, Paul, assignor.)
Ahlstrom, Charles A., Jamestown, N. Y. Lid-support. No. 1,379,794; May 31; v. 286; p. 906.
Aichele, Albert, Baden, Switzerland. Apparatus for operating the sliding wheels of change-speed gears. No. 1,379,891; May 31; v. 286; p. 924.
Aichele, William F., Good Ground, N. Y. Emergency-tire. No. 1,377,170; May 10; v. 286; p. 207.
Aicher, Gustav A., assignor to Arden Salt Company, San Francisco, Calif. Salt-harvesting machine. No. 1,377,999; May 17; v. 286; p. 419.
Aiken, George A., Clifton, N. J. Cutting shirts. No. 1,378,164; May 17; v. 286; p. 451.
Aikin, Arthur C., Mason City, Iowa. Lug-shield for tractor-wheels. No. 1,377,794; May 10; v. 286; p. 327.
Air Reduction Company. (See Wilkinson, Walter, assignor.)
Air Reduction Company. (See Zouck, G. H., and Walker, assignors.)
Air Reduction Company Incorporated. (See Kaufman, Alfonse, assignor.)
Ajax Electrothermic Corporation. (See Northrup, Edwin F., assignor.)
Ajello, Gaetan, New York, N. Y. Landing-gear and shock-absorber for aircraft. No. 1,376,912; May 3; v. 286; p. 102.
Ajouz, George, Detroit, Mich. Velocipede. No. 1,379,604; May 31; v. 286; p. 871.
Akemann, Walther, Essen, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Fire-control apparatus for naval guns. No. 1,379,506; May 24; v. 286; p. 778.
Aktiebolaget Gerh, Arehns Mekaniska Verkstad. (See Ekström, G. C., Johnson, and Orström, assignors.)
Aktiebolaget Gustafsbergs Fabriks Inkessenter. (See Odelberg, Axel S. W., assignor.)
Aktiebolaget Gyro. (See Cassel, Gunnar E., assignor.)
Aktiebolaget Ljungstroms Angturbin. (See Wiberg, Oskar A., assignor.)
Alary, Alphonse, St. Casimir, Quebec, Canada. Hinge. No. 1,379,951; May 31; v. 286; p. 936.
Albrecht, Edward, and W. H. Schuessler, Philadelphia, Pa. Hoisting and dumping vehicle. No. 1,377,611; May 10; v. 286; p. 291.
Albury, Robert C., and L. T. Hayman, Tampa, Fla. Automatic stop mechanism for railways. No. 1,380,174; May 31; v. 286; p. 978.
Alderdice, Walter, New York, N. Y., assignor to Mergenthaler Linotype Company. Slug-casting machine. No. 1,379,892; May 31; v. 286; p. 924.
Alexander, George E., New York, N. Y. Wheel. No. 1,379,507; May 24; v. 286; p. 778.
Alexander, Laurence G. (See Logan, Marcellus J., assignor.)
Alldredge, Francis B., Des Moines, Iowa. Device and process for automatically removing water from gas wells. No. 1,377,171; May 10; v. 286; p. 207.
Allen, Arthur E., Kirkland, Wash. Dehydrating potatoes. No. 1,377,172; May 10; v. 286; p. 207.
Allen, Charles J., San Francisco, Calif. Portable loading device. No. 1,378,576; May 17; v. 286; p. 528.
Allen, Charles O., Shawnee, Okla. Swivel connection for electrical conductors. No. 1,379,795; May 31; v. 286; p. 906.
Allen, Charles R., assignor to The Ashtabula Bow Socket Company, Ashtabula, Ohio. Vehicle-top. No. 1,379,893; May 31; v. 286; p. 925.
Allen, Ebenezer W. (See Heiby, C. G., Burkam, Lindquist, Riggin, Allen, and Lau.)
Allen, Edward B., Bridgeport, Conn., assignor to The Singer Manufacturing Company. Work-clamping mechanism for sewing-machines. No. 1,379,894; May 31; v. 286; p. 925.
Allen, Eryan V., Bogalusa, La. Cultivator. No. 1,378,165; May 17; v. 286; p. 451.
Allen, Herman. (See Daraban, Charles J., assignor.)
Allen, Judge S., New York, N. Y. Hat-holder. No. 1,379,605; May 31; v. 286; p. 871.
Allen, Lucan D., assignor of two-fifths to W. E. Allen, San Francisco, Calif. Demountable-tire rim. No. 1,377,173; May 10; v. 286; p. 207.
Allen, William E. (See Allen, Lucan D., assignor.)
Allen, William H., assignor to Parker Rust-Roof Company, Detroit, Mich. Controlling case-hardening. No. 1,377,174; May 10; v. 286; p. 207.
Allis-Chalmers Manufacturing Company. (See Baudisch, Hans, assignor.)
Allman, Sydney K., Jenkintown, Pa. Bumper for automobiles. No. 1,378,000; May 17; v. 286; p. 419.
Alm, Oscar A., Binford, N. D. Ladder-foot extension. No. 1,377,343; May 10; v. 286; p. 278.
Alpha Timer and Accessories Company, The. (See Bokemeyer, Charles H., assignor.)

Alquist, Sven P., Sedalia, Mo., and A. S. Barrows, Chicago, Ill., assignors of one-third to W. L. Kellogg, Detroit, Mich. Freight-car construction. No. 1,379,952; May 31; v. 286; p. 936.

Alston Saw & Steel Company. (See Pittman, Reinhart W., assignor.)

Altgelt, Herman E., New Braunfels, Tex., assignor to Oliver Chilled Plows Works, South Bend, Ind. Wheel-operated lift mechanism. No. 1,378,754; May 17; v. 286; p. 563.

Altgelt, Rudolph J., assignor to Oliver Chilled Plow Works, South Bend, Ind. Plow. No. 1,377,047; May 3; v. 286; p. 127.

Altgelt, Rudolph J., assignor to Oliver Chilled Plow Works, South Bend, Ind. Plow. No. 1,377,048; May 3; v. 286; p. 128.

Altgelt, Rudolph J., assignor to Oliver Chilled Plow Works, South Bend, Ind. Wheeled plow. No. 1,377,049; May 3; v. 286; p. 128.

Altgelt, Rudolph J., assignor to Oliver Chilled Plow Works, South Bend, Ind. Plow. No. 1,377,050; May 3; v. 286; p. 128.

Altmayer, Marvin C. (See Netter, Raphaël, assignor.)

Alton, William H., New York, N. Y. Treating calcium carbonate. No. 1,379,157; May 24; v. 286; p. 712.

Aluminum Company of America. (See Frary, Francis C., assignor.)

Amalgamated Machinery Corporation. (See Yeomans, Lucien I., assignor.)

American Abrasive Metals Company. (See Burger, Ellsworth, assignor.)

American Balsa Corporation. (See Mattullath, Alice K., assignor.)

American Brake Shoe and Foundry Company, The. (See Jones, Harry, assignor.)

American Building Products Company. (See Stevens, Fremont C., assignor.)

American Chain Company. (See Cole, John W., assignor.)

American Chain Company. (See Smith, Friend W., assignor.)

American Chain Company. (See Stodden, George, assignor.)

American Chemical Laboratories. (See Gelbert, Alfred, assignor.)

American Coke & Chemical Company. (See Roberts, Arthur, assignor.)

American Dressler Tunnel Kilns. (See Kelley, Cott C., assignor.)

American Dressler Tunnel Kilns. (See Zimmerman, Edward G., assignor.)

American Equipment Company, The. (See Cary, William N., assignor.)

American Flexible Bolt Company. (See Frauenheim, J. A., and Etheridge, assignors.)

American Foundry Equipment Company, The. (See Rich, Elmer A., Jr., assignor.)

American Gas Accumulator Company. (See Medén, Elof H., assignor.)

American Hardware Corporation, The. (See Stone, Elmer B., assignor.)

American Lacing Hook Co. (See Blessington, S. G., and Cosgrove, assignors.)

American Lacing Hook Co. (See Havener, Arthur R., assignor.)

American Laundry Machinery Company, The. (See Andrée, William E., assignor.)

American Laundry Machinery Company, The. (See Braley, Charles L., assignor.)

American Manganese Steel Company. (See Watts, James R., assignor.)

American Metal Cap Company. (See Hammer, Charles, assignor.)

American Molding Machine Company. (See Norcross, William C., assignor.)

American Nottingham Process Company. (See Nottingham, C. A., and Tuhey, assignors.)

American Novelty Company, The. (See Ferland, Napoleon H., assignor.)

American Ocarina and Toy Company. (See Gidlof, Conrad E., assignor.)

American Optical Company. (See Demers, Arthur E., assignor.)

American Photo Player Company. (See Van Valkenburg, Burt R., assignor.)

American Road Plane. (See Lee Joseph W., assignor.)

American Steel Foundries. (See Floyd, George G., assignor.)

American Rotary Engine Co. (See Boyer, Alexander B., assignor.)

American Safety Razor Corporation. (See Behrman, Marcus B., assignor.)

American Seeding Machine Company. (See Towle, Elmer E., assignor.)

American Smelting and Refining Company. (See Garr, Samuel R., assignor.)

American Smelting and Refining Company. (See Howard, William H., assignor.)

American Smelting and Refining Company. (See Strobel, Roger L., assignor.)

American Steel Foundries. (See Floyd, George G., assignor.)

American Steel Foundries. (See Lamont, John A., assignor.)

American Stove Company. (See Farnham, Charles F., assignor.)

American Telephone & Telegraph Company. (See Arnold, O. M., and Toomey, assignors.)

American Telephone and Telegraph Company. (See Clark, A. B., and Demarest, assignors.)

American Telephone and Telegraph Company. (See Demarest, Charles S., assignor.)

American Telephone and Telegraph Company. (See Espenschied, Lloyd, assignor.)

American Telephone and Telegraph Company. (See Rhodes, William A., assignor.)

American Telephone and Telegraph Company. (See Toomey, J. F., and Spencer, assignors.)

American Thermophone Company. (See Breckenridge, Francis C., assignor.)

American Well Works, The. (See Sperry, John B., assignor.)

American Whaley Engine Company. (See Whaley, William B. S., assignor.)

American Woodworking Machinery Company. (See Clement, Frank H., assignor.)

Ames, Adelbert, Jr., Tewksbury, Mass. Projection apparatus. No. 1,376,913; May 3; v. 286; p. 102.

Amigues, Albert, Paris, France. Sighting apparatus for firearms, and particularly for machine-guns. No. 1,376,992; May 3; v. 286; p. 117.

Amiot, Felix, Colombes, France. Arrangement or grouping of the parts of the transmission-gear in motorcycles and gear-case therefor. No. 1,378,309; May 17; v. 286; p. 478.

Amoedo, Tomás F., Buenos Aires, Argentina. Device for marking animals and the like. No. 1,378,166; May 17; v. 286; p. 451.

Anchor Cap & Closure Corporation. (See Luhrmann, George W., assignor.)

Anchors, George R., St. Louis, Mo. Making nitrostarch and the like. No. 1,376,598; May 3; v. 286; p. 42.

Andersen, Lauritz W., Waterbury, Conn. Ceiling-light. No. 1,380,131; May 31; v. 286; p. 970.

Andersen, Wilhelm G., and J. H. Brevig, Christiania, Norway. Coupling-sleeve for tubular bodies. No. 1,380,175; May 31; v. 286; p. 978.

Anderson, Albin E., Oakmont, assignor to Pittsburgh Wire Rope Company, Verona, Pa. Machine for making wire rope. No. 1,378,932; May 24; v. 286; p. 670.

Anderson, Carl L., and C. E. Swenson, Rockford, Ill. Method of and apparatus for hobbing teeth on revolving blanks. No. 1,380,286; May 31; v. 286; p. 999.

Anderson, Carl L., *et al.* (See Swenson, Carl E., assignor.)

Anderson, Duncan M., Toronto, Ontario, Canada. Artificial hand. No. 1,377,956; May 10; v. 286; p. 359.

Anderson, E. D., Inc. (See Anderson, Ernest D., assignor.)

Anderson, Elmer W. (See Hutchinson, E. C., and Anderson.)

Anderson, Ernest D., assignor to E. D. Anderson, Inc., New York, N. Y. Cartoning-machine. No. 1,376,499; May 3; v. 286; p. 23.

Anderson, George G. (See Koken, W. F., and Anderson.)

Anderson, George H., Battle Creek, Mich. Centrifugal pump. No. 1,379,380; May 24; v. 286; p. 755.

Andrée, William E., Chicago, Ill., assignor to The American Laundry Machinery Company, Norwood, Ohio. Garment-press. No. 1,379,601; May 24; v. 286; p. 796.

Anderson, Hans C., Minneapolis, Minn. Cot for automobiles. No. 1,377,801; May 17; v. 286; p. 419.

Anderson, Harold N., assignor to The Anderson Patents Company, Cleveland, Ohio. Apparatus for making gears. No. 1,377,175; May 10; v. 286; p. 207.

Anderson, Harold N., assignor to The Anderson Patents Company, Cleveland, Ohio. Forged shrouded gear. No. 1,377,176; May 10; v. 286; p. 208.

Anderson, Harold N., assignor to The Anderson Patents Company, Cleveland, Ohio. Making gears. No. 1,377,177; May 10; v. 286; p. 208.

Anderson, Harry G., Chicago, Ill. Traction device. No. 1,378,083; May 17; v. 286; p. 435.

Anderson, Harry T., Butler, assignor to Standard Steel Car Company, Pittsburgh, Pa. Cane-car. No. 1,380,176; May 31; v. 286; p. 979.

Anderson, Lou B., Celina, Tex. Fuse-block. No. 1,376,392; May 3; v. 286; p. 3.

Anderson, Neal H. (See Newton, D. L., and Anderson.)

Anderson Patents Company, The. (See Anderson, Harold N., assignor.)

Anderson, Raymond M., assignor to G. M. Holley, Detroit, Mich. Carbureter float mechanism. No. 1,380,032; May 31; v. 286; p. 951.

Andreani, Antoine, Geneva, Switzerland. Lock. No. 1,379,844; May 31; v. 286; p. 916.

Andrée, Arthur G. H., assignor to M. J. Andrée, Oak Park, Ill. Wrench. No. 1,377,178; May 10; v. 286; p. 208.

Andrée, Max J. (See Andrée, Arthur G. H., assignor.)

Andreino, Hector, assignor to The Society Fabriques des Moutres Zenith successeur de Fabriques des Moutres Zenith Georges Favre-Tacot & Cie., Le Locle, Switzerland. Ignition-magneto for internal-combustion engines. No. 1,379,953; May 31; v. 286; p. 936.

Andresen, Herman P., Chicago, Ill. Combination heater and maintenance-wagon. No. 1,376,852; May 3; v. 286; p. 90.

Andrews, Carlos S., Chicago, Ill. Screwdriver, or the like. No. 1,377,958; May 10; v. 286; p. 359.

Angeli, Otis R., Boston, Mass. Centrifugal top. No. 1,377,544; May 10; v. 286; p. 278.

Angus, Donald J. (See Esterline, J. W., and Angus.)

Anheuser, Ernst, Racine, Wis. Tool. No. 1,379,737; May 31; v. 286; p. 896.

Annable, Warren W., Grand Rapids, Mich. Keyway-forming in wheels or the like and product thereof. No. 1,376,664; May 3; v. 286; p. 53.

Anti-Corrosion Engineering Company. (See West, Perry, assignor.)

Apco Manufacturing Company. (See Storrie, William, assignor.)

Apollo Magneto Corporation. (See Fuegel, G., and Schmid, assignor.)

Appleby, William E., Newcastle-on-Tyne, England. Toy aeroplane. No. 1,377,867; May 10; v. 286; p. 341.

Arato, Achille, assignor to F. Botta, Turin, Italy. Steering-gear for vehicles used as trailers. No. 1,378,436; May 17; v. 286; p. 502.

Arbuckle, Samuel F., Indianapolis, assignor to United States Automotive Corporation, Connersville, Ind. Lamp construction. No. 1,376,599; May 3; v. 286; p. 42.

Arbuckle, Samuel F., Indianapolis, assignor to United States Automotive Corporation, Connersville, Ind. Adjustably-hinged tilting reflector for lamps. No. 1,376,993; May 3; v. 286; p. 117.

Arden Salt Company. (See Aicher, Gustav A., assignor.)

Arentz, Fred B. (See Backhaus, A. A., and Arentz.)

Arkin, Louis, Boston, Mass. Fastener. No. 1,380,177; May 31; v. 286; p. 979.

Armstrong Cork Company. (See Fix, Frank C., assignor.)

Armstrong, Edward R., Wilmington, Del. Anchoring aeroplane, navigating, and supply stations at any depth of the ocean. No. 1,378,394; May 17; v. 286; p. 494.

Armstrong, Frank W., Salina, Kans. End shield for automobile-dustpans. No. 1,377,705; May 10; v. 286; p. 327.

Arnold, Douglass L., Chicago, Ill., assignor to International Harvester Company. Spark-plug. No. 1,376,500; May 3; v. 286; p. 23.

Arnold, Oscar M., and John F. Toomey, New York, N. Y., assignors to American Telephone & Telegraph Company. Telephone toll-circuits. No. 1,376,391; May 3; v. 286; p. 3.

Arnold, Satterlee T., Paducah, Ky. Bottle-opener. No. 1,376,994; May 3; v. 286; p. 117.

Arnold, John T., Attica, N. Y., assignor to Westinghouse Electric & Manufacturing Company. Stoker. No. 1,379,672; May 31; v. 286; p. 884.

Asbestos Shingle Company. (See Norton, Charles L., assignor.)

Ashley, Chauncey E., Syracuse, N. Y. Locking-socket. No. 1,379,606; May 31; v. 286; p. 871.

Ashley, Chauncey E., Syracuse, N. Y. Locking-socket. No. 1,379,607; May 31; v. 286; p. 872.

"Asfag" Aktiengesellschaft. (See Gebhard, Conrad, assignor.)

Ashbaugh, Robert P., River Forest, and S. C. Cawthon, Cicero, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y. Winding mechanism. No. 1,376,914; May 3; v. 286; p. 102.

Ashtabula Bow Socket Company, The. (See Allen, Charles R., assignor.)

Ashton, John F., Worcester, and T. N. Ashton, Fall River, Mass. Lens-edge-grinding machine. No. 1,378,831; May 24; v. 286; p. 651.

Ashton, Thomas N. (See Ashton, John F. and T. N.)

Ashworth, William D., Philadelphia, Pa. Cartridge-clip. No. 1,379,075; May 24; v. 286; p. 696.

Askin, Morris W. (See Herbert, T. L., and Askin.)

Askren, Herman G., Tipton, Ind. Broom-corn stemmer and separator. No. 1,377,796; May 10; v. 286; p. 328.

Associated Engineering and Supply Company. (See Stewart, Carlton D., assignor.)

Associated Tanners Machinery Co. (See Soper, Walter R., assignor.)

Aston, James, assignor to A. M. Byers Company, Pittsburgh, Pa. Making wrought-iron. No. 1,380,178; May 31; v. 286; p. 979.

Atherton, Alfred L., Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company. Combined rivet-heater and riveter. No. 1,376,501; May 3; v. 286; p. 23.

Atkins, E. C., & Company. (See Berry, Robert C., assignor.)

Atlantic Refining Company, The. (See Buerger, Charles B., assignor.)

Atlas Manufacturing Company. (See Billingsley, Percy L., assignor.)

Atwood, A. L. (See Parmenter, Brady, assignor.)

Augenbraun, Peter F., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Strike or keeper for rim-locks. No. 1,377,051; May 3; v. 286; p. 128.

Augenbraun, Peter F., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Lock for automobile-doors. No. 1,379,508; May 24; v. 286; p. 779.

Auger, Victor, assignor of one-half to A. Ferron, Montreal, Quebec, Canada. Supporting device for switch-actuating bars. No. 1,378,755; May 17; v. 286; p. 564.

Aulenback, James R., Bridgewater, Nova Scotia, Canada. Inside-cutting tool. No. 1,377,109; May 3; v. 286; p. 139.

Austin, Frederick C. (See French, James C., assignor.)

Austin, John T., assignor to The Austin Organ Company, Hartford, Conn. Bearing. No. 1,379,296; May 24; v. 286; p. 738.

Austin Organ Company, The. (See Austin, John T., assignor.)

Austin, Paul V., Buffalo, N. Y. Apparatus for treating grain or the like. No. 1,377,743; May 10; v. 286; p. 316.

Ausubel, Herman, New York, N. Y. Hypodermic-syringe transmission therefor. No. 1,378,756; May 17; v. 286; p. 564.

Auto Safety Device Company. (See Olson, John A., assignor.)

Automatic Electric Company. (See Chapin, William A., assignor.)

Automatic Electric Company. (See Homrighous, John H., assignor.)

Automatic Electric Company. (See Jacobsen, Emil, assignor.)

Automatic Electric Company. (See Seymour, Arthur J., assignor.)

Automatic Electric Company. (See Wicks, John, assignor.)

Automatic Electric Company. (See Willis, Bernard D., assignor.)

Automatic Electric Company. (See Yanochowski, G. A., and Hershey, assignors.)

Automatic Flatwork Folder Company. (See Kelley, Margaret, assignor.)

Automatic Recording Safe Company, The. See Fisher, Charles, assignor.)

Auzenat, Louis G. R., assignor to la Loie Artificielle de La Voulte, Paris, France. Waterproofing and strengthening threads and fabrics. No. 1,377,110; May 3; v. 286; p. 139.

Aveline, Georges, Soho, London, assignor to R. Roze-Perkins, deceased, Kensington, London, England; H. Paget-Cooke and E. A. H. Douglass-Hamilton, executors. Automatic stabilizing or controlling means for aircraft. No. 1,378,895; May 31; v. 286; p. 925.

Aveline, John, Scranton, Pa. Draft appliance. No. 1,378,437; May 17; v. 286; p. 502.

Avery Company. (See Bartholomew, John B., assignor.)

Avery Company. (See Solomon, Edgar J., assignor.)

Avery, Thomas J., Albia, Iowa. Combination scraper, charger, and tamper. No. 1,379,435; May 24; v. 286; p. 764.

Avorio, Luigi. (See Prassone, E., and Avorio.)

Awe, William F., assignor of one-half to M. P. H. Schroeder, Chicago, Ill. Manifold-lock for internal-combustion engines. No. 1,377,168; May 3; v. 286; p. 150.

Awner, Myron, Chicago, Ill. Trousers-belt. No. 1,378,207; May 17; v. 286; p. 458.

Axelman, Harry W. (See Axelman, Mayer and H. W.) (Reissue.)

Axelman, Mayer, and H. W., Chicago, Ill. Brief and other carrying case. (Reissue.) No. 15,104; May 17; v. 286; p. 578.

Axilrod, Meyer, Reading, Pa. Combination table and shaft support. No. 1,379,158; May 24; v. 286; p. 712.

Axtell, Clinton J., assignor to General Electric Company, Schenectady, N. Y. Electrical system of power transmission and regenerative braking. No. 1,378,511; May 17; v. 286; p. 516.

Ayres, W. E. (See Carpenter, Ira L., assignor.)

Babcock & Wilcox Company, The. (See Kemnal, J., and Henry, assignors.)

Babel, Henry C., Buffalo, N. Y. Cushioned tire. No. 1,378,832; May 24; v. 286; p. 651.

Bachle, Andrew, Detroit, Mich. Intake-manifold for internal-combustion engines. No. 1,379,327; May 24; v. 286; p. 745.

Backhaus, Arthur A., Baltimore, and F. B. Arentz, Curtis Bay, Md., assignors to U. S. Industrial Alcohol Co. Making catalyzers. No. 1,376,665; May 3; v. 286; p. 54.

Bacon, Charles R., Los Angeles, Calif. Automatic-call clock. No. 1,380,311; May 31; v. 286; p. 1004.

Bacon, Raymond F., and C. N. Wenrich, Pittsburgh, Pa., assignors to Texas Gulf Sulphur Company, Bay City, Tex. Refining sulfur. No. 1,378,084; May 17; v. 286; p. 435.

Baer, Thomas, and W. H. Bitler, Terre Hill, Pa. Apparatus for use in assorting cigar-wrappers. No. 1,380,179; May 31; v. 286; p. 979.

Bagnall, Chandler, Battle Creek, Mich. Fruit receiving and conveying device. No. 1,380,033; May 31; v. 286; p. 952.

Bahrenburg, Henry W., Newark, N. J. Ice and snow cutting implement. No. 1,378,577; May 17; v. 286; p. 528.

Bail, Elmer E., Pittsburgh, Pa. Milk-bottle receptacle. No. 1,379,509; May 24; v. 286; p. 779.

Bailey, Anna D., New York, N. Y. Adjustable and collapsible dress-form. No. 1,376,502; May 3; v. 286; p. 23.

Bailey, David, Salem, Ohio. Eraser and pencil holder. No. 1,379,608; May 31; v. 286; p. 872.

Bailey, Jessie, and S. Kelley, Clarinda, Iowa. Skirt-marker. No. 1,377,179; May 10; v. 286; p. 208.

Bailey, Percy S., Lynn, Mass., assignor to General Electric Company. Universal joint and shock-absorbing spring for headlights. No. 1,379,510; May 24; v. 286; p. 779.

Bailey, William E., Rock Island, Ill. Camera. No. 1,378,208; May 17; v. 286; p. 458.
Bain, Foreé, La Grange, Ill., assignor to The Miami Trailer Company. Camping-vehicle. No. 1,378,512; May 17; v. 286; p. 516.
Bair, Joseph H., Haddonfield, N. J. Rotary internal-combustion engine. No. 1,377,383; May 10; v. 286; p. 249.
Baird-Daniels Co., *et al.* (See Popper, Joseph, assignor.)
Baird, Melville B., and G. A. Walls, Kansas City, Mo.; said Walls assignor, by mesne assignments, of his right to J. C. W. Bland, Tulsa, Okla. Sanitary drinking-cup. No. 1,378,310; May 17; v. 286; p. 478.
Baird, Walter. (See Cardwell, Charles E., assignor.)
Baird, William J., Detroit, Mich. Molding-machine. No. 1,379,328; May 24; v. 286; p. 745.
Baits, Stuart G. (See Fekete, S. I., and Baits.)
Baivier, Felix J. (See Abern, H. C., and Baivier.)
Baker, A. T., & Company. (See Ott, Frederick, assignor.)
Baker, Charles I., St. Paul, Minn. Automatic hot-water heater. No. 1,376,853; May 3; v. 286; p. 90.
Baker, Clinton C., assignor of one-half to T. L. Bonsall, Ottawa, Ontario, Canada. Detergent. No. 1,378,311; May 17; v. 286; p. 478.
Baker & Company. (See Carter, Frederic E., assignor.)
Baker & Company. (See Van Allen, George L., assignor.)
Baker, Eugene L., Taunton, Mass. Range. No. 1,379,954; May 31; v. 286; p. 937.
Baker, Ira F. (See Meaker, A. P., and Baker.)
Baker, John C., Ridgefield Park, N. J. Sterilizing. No. 1,378,644; May 17; v. 286; p. 542.
Baker, Linnaeus E., assignor to Wayne Oil Tank and Pump Company, Fort Wayne, Ind. Setting mechanism for indicating-registers. No. 1,379,738; May 31; v. 286; p. 896.
Baker, Morvan N., Dorchester, Nebr. Hoisting apparatus. No. 1,377,744; May 10; v. 286; p. 316.
Baker, Newton D., Secretary of War, trustee. (See Cook, Clarence A., assignor.)
Baker-Perkins Manufacturing Corporation. (See Gase, Eugene, assignor.)
Baker, Robert W., assignor of one-half to M. W. Cochrane, Omaha, Nebr. Piston-ring. No. 1,377,151; May 3; v. 286; p. 147.
Baker-Vawter Company. (See Manny, Fred L., assignor.)
Baker, Walter W., and F. W. Franklin, Syracuse, N. Y. Self-centering tool-holder. No. 1,376,791; May 3; v. 286; p. 77.
Balch, Samuel W., Montclair, N. J. Geographical clock. No. 1,378,085; May 17; v. 286; p. 435.
Balch, Samuel W., Montclair, N. J. Ship's-bells clock. No. 1,378,438; May 17; v. 286; p. 502.
Balderston, William, assignor to French Battery & Carbon Co., Madison, Wis. Dry cell. No. 1,380,034; May 31; v. 286; p. 952.
Baldwin, Charles E., Jamestown, assignor to Registrometer Company, Buffalo, N. Y. Measuring-machine. No. 1,379,159; May 24; v. 286; p. 712.
Ballard, Harrie A., Boston, assignor to The Phonoharp Company, East Boston, Mass. Inverted keyed zither. No. 1,376,738; May 3; v. 286; p. 67.
Ballard, Harry E., Holyoke, assignor to The Coburn Trolley Track Manufacturing Company, Chicopee, Mass. Mounting for trolley-switches. No. 1,377,653; May 10; v. 286; p. 299.

Brandenburg, George A., St. Francis, Kans. Attachment for tape-measures. No. 1,380,184; May 31; v. 286; p. 980.

Brandenstein, M. J., & Co. (See Burns, Wilford E., assignor.)

Brant, Paul, Bristol, Ind., and H. T. Wilson, Petoskey, Mich.; said Wilson assignor of his entire right to V. N. Brant, Bristol, Ind. Leather-making. No. 1,378,213; May 17; v. 286; p. 459.

Brant, Victor N. (See Brant, P., and Wilson, assignor.)

Brassington, William B., Port Richmond, N. Y. Valve. No. 1,379,388; May 24; v. 286; p. 756.

Brassington, William B., Port Richmond, N. Y. Valve. No. 1,379,389; May 24; v. 286; p. 756.

Braunschweig, Fred W., Milwaukee, Wis. Aeroplane. No. 1,379,390; May 24; v. 286; p. 757.

Breckenridge, Francis C., Providence, R. I., assignor to American Thermophone Company, Boston, Mass. Transmitter. No. 1,377,144; May 3; v. 286; p. 146.

Breed, Charles W., Western Springs, Ill. Switch-stand. No. 1,380,037; May 31; v. 286; p. 952.

Breer, Carl. (See Jacobsen, C. H., and Breer.)

Brennan, John S., Milwaukee, Wis. Valve for oil-stove reservoirs. No. 1,376,858; May 3; v. 286; p. 91.

Brennan, John S., Milwaukee, Wis. Fuel-reservoir. No. 1,376,859; May 3; v. 286; p. 91.

Brenner, Henry, New York, N. Y. Cap for valve-stems. No. 1,379,676; May 31; v. 286; p. 884.

Bressler, Robert E., Hammond, assignor to O. F. Jordan Company, East Chicago, Ind. Railway-spreader. No. 1,376,510; May 3; v. 286; p. 25.

Brevig, Johannes H. (See Andersen, W. G., and Brevig.)

Brewer, Oscar Z., Spokane, Wash. Timing mechanism. No. 1,378,318; May 17; v. 286; p. 479.

Brewster, Theodore J., Perth Amboy, N. J. Process of nitrating benzol. No. 1,380,185; May 31; v. 286; p. 980.

Brewster, Theodore J., Perth Amboy, N. J. Making nitrophenolic compounds. No. 1,380,186; May 31; v. 286; p. 980.

Bridgman, Percy W. (See Emerson, C. P., and Bridgman.)

Bridgman, Percy W., Cambridge, Mass. Vibration-absorbing mounting. No. 1,377,556; May 10; v. 286; p. 281.

Briggs, Charles A. (See Cooper, Hamilton A., assignor.)

Briggs & Stratton Company. (See Briggs, S. F., and Jacobi, assignors.)

Briggs, Stephen F., and E. N. Jacobi, assignors to Briggs & Stratton Company, Milwaukee, Wis. Lock-switch. No. 1,377,145; May 3; v. 286; p. 146.

Brigham, Edwin T., Kansas City, Mo., assignor to J. Rousso, Los Angeles, Calif. Towel-rack. No. 1,378,214; May 17; v. 286; p. 459.

Brinley, William, and W. Collins, Benton, Ill. Coal-washer. No. 1,378,521; May 17; v. 286; p. 518.

British Metal and Toy Manufacturers Limited, The. (See Hazelton, George, assignor.)

British Westinghouse Electric and Manufacturing Company. (See Guy, Henry L., assignor.)

Brixey, Austin D., New York, N. Y., assignor to Ordinator Company, Inc. Multiple shade-roller. No. 1,377,461; May 10; v. 286; p. 264.

Brock, Addison W., assignor to H. Gamse & Bro., Baltimore, Md. Bronzing-machine. No. 1,377,056; May 3; v. 286; p. 129.

Brock, Joseph, assignor of one-eighth to E. Demuling and five per cent. to J. J. Grant, Erie, Pa. Horseshoe-punching machine. No. 1,377,799; May 10; v. 286; p. 328.

Brockett, Frederick G., Chicago, Ill. Shutter mechanism for cameras. No. 1,378,936; May 24; v. 286; p. 671.

Broderick, Arthur F., Jersey City, N. J. Locking device for automobiles. No. 1,376,999; May 3; v. 286; p. 118.

Brodowski, John F., Milwaukee, Wis. Sash-fastener. No. 1,379,959; May 31; v. 286; p. 938.

Brodu, François-Louis, Nantes, France. Adjustable work-holder for machine-tools and the like. No. 1,380,287; May 31; v. 286; p. 999.

Broider, Louis, *et al.* (See Wagner, Michael, assignor.)

Brolt Limited. (See Holt, William, assignor.)

Bronnert, Emile, Mülhausen, Alsace-Lorraine, France. Recovering salts formed in the manufacture of artificial silk. No. 1,376,671; May 3; v. 286; p. 54.

Bronnert, Emile, Mülhausen, Alsace-Lorraine, France. Manufacture of viscose silk. No. 1,376,672; May 3; v. 286; p. 55.

Bronson, George. (See Houseman, W. H., and Bronson.)

Brooks, Hugh A., Bainbridge, Ga. Lathe-chuck. No. 1,378,319; May 17; v. 286; p. 479.

Brooks, John C., Paterson, N. J. Loom. No. 1,377,390; May 10; v. 286; p. 250.

Brooks, S. J., *et al.* (See Taft, John A., assignor.)

Brooks, Winfred M., West Orange, N. J. Sealing mechanism. No. 1,380,038; May 31; v. 286; p. 952.

Brose, Carrie H., San Diego, Calif. Measurer and gage. No. 1,380,187; May 31; v. 286; p. 980.

Brouillard, Donat, Haverhill, Mass. Lifting-tackle. No. 1,377,870; May 10; v. 286; p. 342.

Brown & Bigelow. (See Kristofek, Frank J., assignor.)

Brown, Christopher, Charleroi, Pa., assignor to Pittsburgh Plate Glass Company. Edge grinding and polishing machine. No. 1,380,133; May 31; v. 286; p. 970.

Brown Company. (See Richter, George A., assignor.)

Brown, Egbert S., East Savannah, Ga. Conveyer. No. 1,377,800; May 10; v. 286; p. 328.

Brown, Frank A., Indianapolis, Ind., assignor to G. & J. Tire Company. Vulcanizing-pad. No. 1,379,391; May 24; v. 286; p. 757.

Brown, George F., Moorhead, Minn., assignor to The International Patent Investment Company, Fargo, N. D. Grain-drying process. No. 1,377,662; May 10; v. 286; p. 301.

Brown, Henry L., Atlantic City, N. J. Holder. No. 1,378,807; May 17; v. 286; p. 573.

Brown, Herbert L., Petersburg, Va. Bottle-capping machine. No. 1,379,161; May 24; v. 286; p. 713.

Brown Hoisting Machinery Company, The. (See Larkworthy, Frederick W., assignor.)

Brown, Hugh, Battle Creek, Mich., assignor, by mesne assignments, to Wirebounds Patents Company. Box or crate. (Reissue.) No. 15,100; May 10; v. 286; p. 367.

Brown, John B., Belleville, assignor of one-half to L. Cannold, East Orange, N. J. Self-closing container. No. 1,377,801; May 10; v. 286; p. 329.

Brown, John R., assignor to The Ohio Brass Company, Mansfield, Ohio. Rail-bond. No. 1,376,396; May 3; v. 286; p. 4.

Brown, John W., and W. Hess, assignors to Benjamin P. Obdyke, Inc., Philadelphia, Pa. Seaming apparatus. No. 1,377,305; May 10; v. 286; p. 233.

Brown, John W., and W. Hess, assignors to Benjamin P. Obdyke, Inc., Philadelphia, Pa. Sheet-metal-seaming machine. No. 1,378,651; May 17; v. 286; p. 543.

Brown, Lyman D., Flint, Mich. Vehicle-wheel. No. 1,378,399; May 17; v. 286; p. 495.

Brown, Oran K., Evanston, Ill. Cultivator attachment for tractor. No. 1,378,994; May 24; v. 286; p. 681.

Brown, Ray M., Yonkers, N. Y. Locomotive driving-axle journal-box. No. 1,377,557; May 10; v. 286; p. 281.

Brown, Theophilus M., assignor of one-third to H. P. Parker and one-third to R. J. Howland, Seattle, Wash. Ship's ventilator-cover. No. 1,379,162; May 24; v. 286; p. 713.

Brown, Theophilus M., Seattle, Wash. Ship's ventilating-cowl. No. 1,379,163; May 24; v. 286; p. 713.
Brown, William E., and P. C. Seegmueller, Detroit, Mich. Chuck. No. 1,377,663; May 10; v. 286; p. 301.
Brownell, William M., Brooklyn, N. Y. Drier. No. 1,378,808; May 17; v. 286; p. 574.
Brownyard, George W., Los Angeles, Calif. Automobile-wheel construction. No. 1,379,079; May 24; v. 286; p. 697.
Bruckman, Frederick A., Portland, Oreg. Stop mechanism for pastry-making machines. No. 1,379,080; May 24; v. 286; p. 697.
Bruckner, Rudolph E., New York, N. Y. Liquid service-gage. No. 1,378,440; May 17; v. 286; p. 502.

Eaton, George M., Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company. Automatic pumping system. No. 1,376,411; May 3; v. 286; p. 6.
Eaton, Malvern A., Littleton, assignor to Pike Manufacturing Company, Pike, N. H. Machine for grinding articles with plane surfaces. No. 1,377,117; May 3; v. 286; p. 141.

Eaton, Malvern A., Littleton, assignor to Pike Manufacturing Company, Pike, N. H. Machine for shaping articles by grinding. No. 1,377,118; May 3; v. 286; p. 141.

Eaton, Malvern A., Littleton, assignor to Pike Manufacturing Company, Pike, N. H. Machine for shaping sharpening-stones. No. 1,377,119; May 3; v. 286; p. 141.

Eberhardt, George O., Kelliher, assignor of one-half to J. Jerome, Battle River, Minn. Oil strainer and sediment trap. No. 1,378,334; May 17; v. 286; p. 482.

Eberle, Herman J., St. Louis, Mo. Removable floor-form section for use in connection with column-forms used in slab construction. No. 1,379,003; May 24; v. 286; p. 683.

Ebert, Frederick J., Mount Vernon, Wash. Card game. No. 1,377,327; May 10; v. 286; p. 238.

Eckart, Charles F., Honolulu, Hawaii. Enhancing the growth of plants. No. 1,377,566; May 10; v. 286; p. 282.

Eckert, Grandon E., assignor to The R. Thomas & Sons Co., East Liverpool, Ohio. Cable-clamp. No. 1,378,667; May 17; v. 286; p. 547.

Eckhart, Marvin L., Attica, Ind., assignor to National Car Coupler Co., Chicago, Ill. Car-coupling. No. 1,378,098; May 17; v. 286; p. 438.

Eclipse Interchangeable Counterbore Company. (See Smith, John H., assignor.)

Eclipse Machine Company. (See Richards, Julius H., assignor.)

Ecob, Robert G., New York, N. Y. Aeroplane. No. 1,377,414; May 10; v. 286; p. 255.

Eddy, Ray L., assignor of one-half to W. H. Washburne, Chicago, Ill. Self-cleaning filter for carbureter-intakes. No. 1,377,191; May 10; v. 286; p. 211.

Edelmann, Erich, Chicago, Ill. Grease and oil gun. No. 1,379,004; May 24; v. 286; p. 683.

Eden, James A., Jr., Springfield, Mass., assignor to W. H. Foster, New York, N. Y. Bolt-making machine. No. 1,380,047; May 31; v. 286; p. 954.

Edgar, Arthur J., Humboldt, Ill. Tractor-guide. No. 1,376,412; May 3; v. 286; p. 7.

Edgecomb, Arthur C. (See Downey, J. B., and Edgecomb.)

Edgerton, John A., and H. F. Calkins, Newark, N. J. Keyless lock for automobiles. No. 1,378,335; May 17; v. 286; p. 482.

Edison, Karl, assignor to H. E. Bloch, Spring Valley, N. Y. Toy. No. 1,376,749; May 3; v. 286; p. 70.

Edison, Thomas A., assignor to New Jersey Patent Company, West Orange, N. J. Production of molded articles. No. 1,377,192; May 10; v. 286; p. 211.

Edison, Thomas A., assignor to New Jersey Patent Company, West Orange, N. J. Production of molded articles. No. 1,377,193; May 10; v. 286; p. 211.

Edison, Thomas A., West Orange, N. J. Storage battery. No. 1,377,194; May 10; v. 286; p. 211.

Edison, Thomas A., Llewellyn Park, West Orange, N. J. Storage battery. No. 1,379,088; May 24; v. 286; p. 699.

Edison, Thomas A., Llewellyn Park, West Orange, N. J. Production of thin metallic sheets or foils. No. 1,379,089; May 24; v. 286; p. 699.

Edmunds & Jones Corporation. (See Godley, Charles E., assignor.)

Edstrom, Earnest E. Whitefish, Mont. Sheave-block. No. 1,378,844; May 24; v. 286; p. 653.

Edwards, Christopher B., deceased; S. B. Edwards, executrix, assignor to Moeschl-Edwards Corrugating Company, Covington, Ky. Cleat for sheet-metal roofing. No. 1,376,751; May 3; v. 286; p. 70.

Edwards, Sadie B., executrix. (See Edwards, Christopher B.)

Egan, Charles E. (See Canova, P. J., Jr., and Egan.)

Eger, Louis, assignor of one-half to J. L. Martin, Brooklyn, N. Y. Loading device. No. 1,378,014; May 17; v. 286; p. 421.

Egerton, Clifford W., and J. W. Hanf, Brooklyn, N. Y. Hose-supporter. No. 1,376,750; May 3; v. 286; p. 70.

Eggerth, Henry E., Minneapolis, Minn. Windmill-fan. No. 1,377,328; May 10; v. 286; p. 238.

Egler, Nickolas F., Chicago, Ill. Heating-furnace. No. 1,380,095; May 31; v. 286; p. 963.

Egry Register Company, The. (See Stern, Milton C., assignor.)

Ehrlich, Leo. (See Peebles, Frank W. L., assignor.)

Eichelberger, Lewis H., Plainfield, N. J., assignor to Ransome Concrete Machinery Company, New York, N. Y. Concrete mixing and distributing apparatus. No. 1,379,174; May 24; v. 286; p. 715.

Eiffert, William. (See Cates, C. S., and Peters, assignor.)

Eilers, Herman D., Ireton, Iowa. Automobile-lock. No. 1,377,819; May 10; v. 286; p. 332.

Eisele, Herman. (See Mueller, C. B., and Eisele.)

Ekern, Alfred, Minneapolis, and R. A. Tanner, St. Paul, Minn. Portable milking-machine. No. 1,377,244; May 10; v. 286; p. 221.

Ekström, Gunnar C., B. A. Johnson, and G. Orstrom, assignors to Aktiebolaget Gerh. Arehns Mekaniska Verkstad, Stockholm, Sweden. Machine for making cartons. No. 1,379,254; May 24; v. 286; p. 730.

Ekstrom, Eric S., *et al.* (See Swenson, Carl E., assignor.)

Elder, William J., Oswego, N. Y. Feed mechanism for wood-reworking machines. No. 1,378,845; May 24; v. 286; p. 653.

Electric Boat Company. (See Gunn, Thomas M., assignor.)

Electric Boiler Corporation. (See Nicholl, John S., assignor.)

Electric Outlet Company. (See White, Ernest C., assignor.)

Electric Service Supplies Company. (See Lewis, H. G., and Mayer, assignors.)

Electric Water Sterilizer and Ozone Company. (See Hartman, Harry B., assignor.)

Electrostrop Manufacturing Company. (See Kalteyer, Frederick J., assignor.)

Eligh, Charles A., assignor to Long Manufacturing Company, Detroit, Mich. Edging machine for automatically perforating and cutting off strips of metal. No. 1,379,005; May 24; v. 286; p. 683.

Eligh, Charles A., assignor to Long Manufacturing Company, Detroit, Mich. Method and machine for making radiator-tubes. No. 1,379,006; May 24; v. 286; p. 684.

Ellerbeck, Ben B., Washington, D. C. Convertible automobile-top. No. 1,379,906; May 31; v. 286; p. 927.

Elling, Jens W. A., assignor to A/S Myrens Verksted, Christiania, Norway. Revolving suction-strainer. No. 1,377,765; May 10; v. 286; p. 321.

Elliott-Fisher Company. (See Foothorap, Harry A., assignor.)

Elliott, Sterling, Newton, Mass. Machine for impressing characters on stencil-blanks. No. 1,378,771; May 17; v. 286; p. 567.

Elliott, William F., De Kalb, Ill. Fork for handling fodder. No. 1,378,772; May 17; v. 286; p. 567.

Elliott, William S., Pittsburgh, Pa. Strainer. No. 1,380,114; May 31; v. 286; p. 967.

Ellis, Carleton, Montclair, N. J. Making catalyzers. No. 1,378,336; May 17; v. 286; p. 482.

Ellis, Carleton, Montclair, N. J. Catalyzer and producing same. No. 1,378,337; May 17; v. 286; p. 483.

Ellis, Carleton, Montclair, N. J. Catalyzer for oil-hardening and making. No. 1,378,338; May 17; v. 286; p. 483.

Ellis, Herbert, Singapore, Straits Settlements, assignor to Linotype and Machinery Limited, London, England. Means for composing tabular matter in typographical composing and casting machines. No. 1,377,820; May 10; v. 286; p. 332.

Ellis, William F., assignor to The Standard Manufacturing Company, Baltimore, Md. Paste-receptacle. No. 1,377,567; May 10; v. 286; p. 283.

Ellis, William F., Baltimore, Md., and A. J. Garland, Washington, D. C., assignors to The Standard Manufacturing Company, Baltimore, Md. Dispensing-bottle closure. No. 1,377,568; May 10; v. 286; p. 283.

Elmes, Charles F., Engineering Works. (See Slater, Harvey, assignor.)

Elsen, Hubert, Antwerp, Belgium. Device for launching lifeboats. No. 1,380,194; May 31; v. 286; p. 982.

Elvin, Albert G., Plandome, A. B. Fahnestock, Great Neck, and F. H. Clark, assignors to Elvin Mechanical Stoker Company, New York, N. Y. Fuel-feeding mechanism. No. 1,376,521; May 3; v. 286; p. 27.

Elvin Mechanical Stoker Company. (See Elvin, A. G., Fahnestock, and Clark, assignors.)

Emerson Apparatus Company. (See Emerson, C. J., and Bridgman, assignors.)

Emerson, Charles J., Providence, R. I., and P. W. Bridgman, Cambridge, assignors to Emerson Apparatus Company, Boston, Mass. Method of and apparatus for rapid weighing in analytical balance. No. 1,377,569; May 10; v. 286; p. 283.

Emory, Robert J., Newark, N. J. Reamer. No. 1,378,339; May 17; v. 286; p. 483.

Emrick, Bert R., and J. K. Porter, Chauk, Upper Burma, India. Deep-well pump. No. 1,380,048; May 31; v. 286; p. 954.

Endler, Joseph, Rochester, Pa. Making potash. No. 1,380,195; May 31; v. 286; p. 982.

Engel, Karl, Arlington, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Making shoes. No. 1,377,329; May 10; v. 286; p. 238.

Englund, Ernst E., assignor to D. M. Sechler Implement & Carriage Company, Moline, Ill. Planter. No. 1,377,766; May 10; v. 286; p. 321.

Englund, Louis J., Oakland, Calif. Combination shipbevel, miter-square, callpers, and rule. No. 1,379,090; May 24; v. 286; p. 699.

Ensminger, Howard. (See Davis, W. L., and Ensminger, assignors.)

Enter, Fred F., Cuyahoga Falls, assignor of one-half to W. Martin, Cleveland, Ohio. Wheel-rim-fastening device. No. 1,379,856; May 31; v. 286; p. 918.

Enterprise Manufacturing Company. (See Pflueger, Charles T., assignor.)

Ercolani, John. (See Fraccascia, F., and Ercolani.)

Erickson, Frederic W., East Greenwich, R. I. Conduit-pipe coupling. No. 1,378,015; May 17; v. 286; p. 422.

Erickson, Jonas B., Iron Mountain, Mich. Spike-puller. No. 1,380,196; May 31; v. 286; p. 982.

Erickson, Theodore, Charlevoix, Mich. Press. No. 1,377,469; May 10; v. 286; p. 265.

Erik, Emil, assignor of one-half to J. Fetto, Ossining, N. Y. Traction-tread. No. 1,379,336; May 24; v. 286; p. 747.

Erikainen, John, Pelkie, Mich. No. 1,377,821; May 10; v. 286; p. 333.

Fahrenwald, Frank A., Cleveland Heights, Ohio. Apparatus for high-temperature uses. No. 1,378,941; May 24; v. 286; p. 672.

Fahrni, Otto, Thoune, assignor to W. Gerber, Thoune, Hofstetten, and E. Schneider, Bachimatte, Thoune, Switzerland. Automatic embroidering-machine. No. 1,378,668; May 17; v. 286; p. 547.

Fahrni, Otto, Thoune, assignor to L. Wyler and A. H. Rieser-Beutter, Berne, Switzerland. Machine for perforating jacquard-cards for embroidery-machines. No. 1,379,807; May 31; v. 286; p. 909.

Fairbanks Company, The. (See Sponsel, Charles W., assignor.)

Fairbanks, Morse & Company. (See Jahnke, Charles B., assignor.)

Fairchild, Clifford J., assignor to Black Products Co., Chicago, Ill. Target. No. 1,378,340; May 17; v. 286; p. 483.

Fairholme, Frederick C., W. H. Hatfield, and G. Stanfield, Sheffield, England, assignors to Firth Sterling Steel Company, McKeesport, Pa. Tool for testing the hardness of materials. No. 1,376,413; May 3; v. 286; p. 7.

Fairless, Victor H., Trenton, Tenn. Soft-collar support. No. 1,378,773; May 17; v. 286; p. 567.

Falcone, Joseph, New York, N. Y. Combination-globe. No. 1,377,121; May 3; v. 286; p. 141.

Falle, John E. (See Shader, C. L., and Falle.)

Falls, Alexander S., Glencoe, Ill. Desk. No. 1,377,767; May 10; v. 286; p. 322.

Fankboner, Harland. (See Walser, J. J., and Fankboner.)

Fanning, Grover C., Wichita, Kans. Weed-turning attachment to plows. No. 1,380,197; May 31; v. 286; p. 982.

Farina, Joseph A., *et al.* (See Snelling, S. A., and Saner, assignors.)

Farmer, Clyde C., Pittsburgh, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Safety car-control device. No. 1,378,404; May 17; v. 286; p. 496.

Farmer, Clyde C., Pittsburgh, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Brake-pipe cut-out cock. No. 1,378,405; May 17; v. 286; p. 496.

Farmer, Clyde C., Edgewood, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Safety car device. No. 1,378,406; May 17; v. 286; p. 496.

Farmer, Thomas J., Omaha, Nebr. Telephone attachment. No. 1,378,774; May 17; v. 286; p. 567.

Farnham, Charles F., Lorain, Ohio, assignor to American Stove Company, St. Louis, Mo. Display-card. No. 1,380,198; May 31; v. 286; p. 982.

Farnsworth, Frank J., Highland Park, Mich. Device for lifting washing-machine cylinders. No. 1,376,414; May 3; v. 286; p. 7.

Farquhar, James C., Zanesville, Ohio. Bookcase. No. 1,379,091; May 24; v. 286; p. 699.

Farrel Foundry and Machine Company. (See Bowen, D. R., and Schnuck, assignors.)

Farrington, Herbert O., Kittery, Me., assignor of one-half to A. W. Harrison, Boston, Mass. Mailing blank or sheet. No. 1,376,865; May 3; v. 286; p. 93.

Farrow, Franklin, West Brooksville, Me. Peat-spatulating machine. No. 1,378,775; May 17; v. 286; p. 567.

Farry, Michael L., Boston, Mass. Horseshoe. No. 1,378,942; May 24; v. 286; p. 672.

Faurot, Joseph A. (See Carmody, Harold J., assignor.)

Faust, Levin, *et al.* (See Swenson, Carl E., assignor.)

Fearn, Richard L., Jr., assignor to National Electrical Supply Company, Washington, D. C. Thermally-controlled electric switch. No. 1,380,049; May 31; v. 286; p. 955.

Febrey, Harold H., Newark, N. J. Paper-clip. No. 1,376,753; May 3; v. 286; p. 70.

Feeney, John, Lodi, N. J. Treating wicks. No. 1,379,857; May 31; v. 286; p. 918.

Fegraeus, Harold. (See Wangenstein, J. J., and Fegraeus.)

Fehr, Walter E., Baltimore, Md. Combined valve-cutter and valve-seat reamer. No. 1,377,470; May 10; v. 286; p. 265.

Feist, Sidney E., Brooklyn, N. Y. Figure for ballroom dancing practice. No. 1,378,669; May 17; v. 286; p. 547.

Fekete, Stephen I., assignor to Essex Motors, Detroit, Mich. Spring-shackle for motor-vehicles. No. 1,376,803; May 3; v. 286; p. 80.

Fekete, Stephen I., and S. G. Baits, assignors to Essex Motors, Detroit, Mich. Motor-vehicle. No. 1,380,097; May 31; v. 286; p. 964.

Feldkamp, William J., Brantford, Ontario, Canada. Camping utensil. No. 1,378,846; May 24; v. 286; p. 654.

Felger, F. & F. (See Felger, Frederick H., assignor.)

Felger, Frederick H., assignor to F. & F. Felger, Inc., Newark, N. J. Link bracelet. No. 1,376,866; May 3; v. 286; p. 93.

Felix, Louis, Warba, Minn. Weighing-fork. No. 1,380,199; May 31; v. 286; p. 983.

Fender, Nicholas, Chicago, Ill. Freight-car. No. 1,377,122; May 3; v. 286; p. 142.

Fenn, William B., assignor to The Wedoit Company, Columbus, Ohio. Cooking or sterilizing machine. No. 1,377,245; May 10; v. 286; p. 221.

Fenn, William B., New York, N. Y. Sterilizing canned goods. No. 1,378,531; May 17; v. 286; p. 520.

Fennell, James T., Philadelphia, Pa. Boiler. No. 1,378,847; May 24; v. 286; p. 654.

Fenske, Daniel, assignor of one-half to J. C. Kleist, Milwaukee, Wis. Flying-machine. No. 1,378,100; May 17; v. 286; p. 438.

Ferentz, Max L. (See Zeidler, W. A., and Ferentz.)

Ferencz, Szabo. (See Szakács, J., and Ferencz.)

Ferguson, Harry, Belfast, Ireland. Tractor-hitch. No. 1,379,399; May 24; v. 286; p. 758.

Ferguson, William C., St. Louis, Mo. Apparatus for purifying and disposing of sewage. No. 1,380,200; May 31; v. 286; p. 983.

Ferland, Napoleon H., assignor to The American Novelty Company, Incorporated, Norwood, Mass. Combustion-promoting device for stoves. No. 1,377,010; May 3; v. 286; p. 120.

Fernández, Ataulfo, San Francisco, Calif. Refuse-collection vehicle. No. 1,379,007; May 24; v. 286; p. 684.

Ferris, William E., Cleveland, Ohio, assignor to The Ohio Trailer Company. Trailer-truck for industrial purposes. No. 1,378,445; May 17; v. 286; p. 503.

Ferron, Arthur. (See Auger, Victor, assignor.)

Fetto, John. (See Erik, Emil, assignor.)

Fibre Container Company. (See Walter, Harrison B., assignor.)

Field, Frank H., Jamestown, N. Y. Shock-absorber. No. 1,378,532; May 17; v. 286; p. 520.

Field, Joseph C., Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Selective signaling system. No. 1,378,943; May 24; v. 286; p. 672.

Fies, Herbert W., Cleveland Heights, assignor of one-half to M. L. Jeffrey, Cleveland, Ohio. Safety-shoe for ladders. No. 1,379,808; May 31; v. 286; p. 909.

Filippi, Antoine P., assignor to Henri J. L. M. de la Chevardiere de la Grandville, Paris, France. Propeller. No. 1,378,776; May 17; v. 286; p. 568.

Finckh, Fritz, Essen, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Barrel-recoil gun. No. 1,379,543; May 24; v. 286; p. 785.

Horn, William, and J. Hagan, Oneonta, assignors to Quality Silk Mills, Inc., New York, N. Y. Glove-pointing machine. No. 1,378,820; May 17; v. 286; p. 576.
Hornig, Charles E., Jersey City, N. J. Velocipede. No. 1,377,886; May 10; v. 286; p. 345.
Hornung, Charles G., assignor to Larkin Co., Buffalo, N. Y. Box or container. No. 1,376,939; May 3; v. 286; p. 107.
Horsley, Peter, Chicago, Ill. Window. No. 1,378,828; May 17; v. 286; p. 577.
Horspool, Francis L., Salt Lake City, Utah. Rotary engine. No. 1,379,028; May 24; v. 286; p. 688.
Horton, Bryson D., Detroit, Mich. Electrical switch. No. 1,376,813; May 3; v. 286; p. 82.
Horton, Bryson D., Detroit, Mich. Electrical switch. No. 1,378,232; May 17; v. 286; p. 463.
Horton, Joseph W., East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Method of and apparatus for detecting under-water vibrations. No. 1,378,960; May 24; v. 286; p. 675.
Horton Manufacturing Company, The. (See Nelson, De Witt, assignor.)
Horton, Richard W., assignor to Barnett Samuel & Sons Limited, London, England. Talking-machine. No. 1,376,880; May 3; v. 286; p. 96.
Horvath, Geza, Highland Park, Mich. Fuel-economizing device. No. 1,377,963; May 10; v. 286; p. 360.
Horvath, Geza, Highland Park, Mich. Speed-controlling device for vehicles. No. 1,377,964; May 10; v. 286; p. 360.
Horvath, Geza, assignor to National Can Company, Detroit, Mich. Radiator construction. No. 1,377,965; May 10; v. 286; p. 360.
Hoskin, William, assignor of one-third to L. L. Richardson, Denver, Colo. Milk-bottle carrier. No. 1,377,350; May 10; v. 286; p. 243.
Hostler, Edgar D., I. J. Hamiel, and C. H. Mather, Tipton, Iowa, assignors of one-half to said Hostler, one-fourth to said Hamiel, and one-fourth to said Mather. Vulcanizer. No. 1,379,447; May 24; v. 286; p. 767.
Hotchkiss, A. E. (See Hotchkiss, L. A., and Stocum, assignors.)
Hotchkiss, Louis A., and P. W. Stocum; said Stocum assignor to A. E. Hotchkiss, Oshkosh, Wis. Axle construction. No. 1,377,685; May 10; v. 286; p. 305.
Hotchkiss, Wallace J., Alpena, S. D. Handle. No. 1,379,020; May 24; v. 286; p. 686.
Houck, William A., Reading, Pa. Cop-mounting. No. 1,377,416; May 10; v. 286; p. 255.
Houghton, Roy N. (See Lueky, E. A., and Houghton.)
Houley, Joseph C., and C. E. Shaw, Chicago, Ill. Phonograph-cabinet. No. 1,378,117; May 17; v. 286; p. 441.
House, Milus M., Indianapolis, Ind., assignor to The Dentists' Supply Company. Specimen set-up for artificial teeth. No. 1,379,689; May 31; v. 286; p. 887.
Houseman, Walter H., and G. Bronson, Highland Park, Mich. Automobile-boat. No. 1,380,319; May 31; v. 286; p. 1005.
Houston, W. O. (See Seal, Theodore T., assignor.)
Howard, Benjamin W., Newmarket, Ontario, Canada. Vehicle. No. 1,379,567; May 24; v. 286; p. 789.
Howard, Charles F. (See Bleesing, W., Howard, and Pexton.)
Howard, John A., Sr., West New Brighton, N. Y., assignor to The Camward Engineering Co., Inc. Adjustable rest for washboards. No. 1,377,076; May 3; v. 286; p. 133.
Howard, Karl S., assignor to Commonwealth Steel Company, St. Louis, Mo. Trolley-frame. No. 1,376,881; May 3; v. 286; p. 96.
Howard, William H., Salt Lake City, Utah, assignor to American Smelting and Refining Company, New York, N. Y. Recovering sulfur dioxid. No. 1,377,012; May 3; v. 286; p. 120.
Howard, William H., Salt Lake City, Utah, assignor to American Smelting and Refining Company, New York, N. Y. Obtaining a continuous flow of SO_2 from white metal. No. 1,377,013; May 3; v. 286; p. 121.
Howe Scale Company. (See Sonander, Andrew, assignor.)
Howell, Joseph A., Dover, Ohio. Time-controlled desk-memorandum. No. 1,379,342; May 24; v. 286; p. 747.
Howells, Thomas J. (See Jones, John T., assignor.)
Howland, Robert J., *et al.* (See Brown, Theophilus M., assignor.)
Howley, Thomas H. A., New York, and Dooley, J. J., Brooklyn, N. Y. Plaster-board. No. 1,379,444; May 24; v. 286; p. 766.
Hoyle, Ernest, Brooklyn, N. Y. Chuck. No. 1,377,351; May 10; v. 286; p. 243.
Hoyle, Millard F., Dallas, Tex. Plastic base for poles. No. 1,378,351; May 17; v. 286; p. 485.
Hrib, George, Simpson, W. Va. Gear box and drive for aeroplane-propellers. No. 1,377,483; May 10; v. 286; p. 268.
Hromadko, Joseph A., New Haven, Conn., assignor to The Motor Radiator & Manufacturing Corporation. Radiator. No. 1,376,882; May 3; v. 286; p. 96.
Hubbard, Roscoe C., New York, N. Y. Apparatus for the developing, &c., of films. No. 1,377,887; May 10; v. 286; p. 346.
Hubbell, Harry C., assignor to Willard Storage Battery Company, Cleveland, Ohio. Method and means for making electrical connections. No. 1,378,461; May 17; v. 286; p. 506.
Huebner Bleistein Patents Co. (See Huebner, William C., assignor.)
Huebner, William C., assignor to Huebner Bleistein Patents Co., Buffalo, N. Y. Photographic-printing apparatus. No. 1,377,249; May 10; v. 286; p. 222.
Huebner, William C., assignor to Huebner-Bleistein Patents Company, Buffalo, N. Y. Photographic-printing apparatus. No. 1,377,250; May 10; v. 286; p. 222.
Huffman, Orla L., Weatherford, Tex. Washing-machine. No. 1,378,541; May 17; v. 286; p. 522.
Huffman, Orla L., Weatherford, Tex. Steering attachment. No. 1,378,542; May 17; v. 286; p. 522.
Hufford, Ernest C., Los Angeles, Calif. Preparing retread-matrix and product thereof. No. 1,380,320; May 31; v. 286; p. 1005.
Hughens, Robert L., Atlanta, Ga. Push-rod connection for automobile-engine valves. No. 1,379,343; May 24; v. 286; p. 748.
Hughes, Arthur J. (See Starling, S. G., and Hughes.)
Hughes, Charles B., New Orleans, La. Tension device for use in orthopedic surgery. No. 1,380,297; May 31; v. 286; p. 1001.
Hughes, Charles H., assignor of one-half to F. C. Cramer, Denver, Colo. Outlet-valve for gasolene-dispensing apparatus of filling stations. No. 1,377,835; May 10; v. 286; p. 335.
Hughes, Harry D. (See Hughes, Stanley R. and H. D.)
Hughes, Henry, and Son Limited. (See Starling, S. G., and Hughes, assignors.)
Hughes, John T., Council Bluffs, Iowa. Steering and braking device for aeroplanes. No. 1,378,233; May 17; v. 286; p. 463.

Hughes, John T., Council Bluffs, Iowa. Aeroplane shock-absorber. No. 1,378,234; May 17; v. 286; p. 463.

Hughes, Robert R., Jr., Naperville, assignor to Union Special Machine Company, Chicago, Ill. Sewing-machine. No. 1,376,623; May 3; v. 286; p. 46.

Hughes, Stanley R., Benton, and H. D. Hughes, Lytle, Tex. Oil-pump. No. 1,379,690; May 31; v. 286; p. 887.

Hulbert, Ansel C., San Francisco, Calif., assignor to E. C. Streich, M. C. Streich, J. E. Manning, E. E. Mullvain, and V. A. Shafer, trustees for the National Auto Signal Company. Automobile signal-switch. No. 1,379,985; May 31; v. 286; p. 942.

Hulbert, Edwin F., assignor to National Paper Can Company, Milwaukee, Wis. Machine for forming shells of paper or the like. No. 1,380,103; May 31; v. 286; p. 965.

Hulbert, Edwin F., assignor to National Paper Can Company, Milwaukee, Wis. Machine for forming shells of paper or the like. No. 1,380,104; May 31; v. 286; p. 965.

Hulbert, Edwin F., assignor to National Paper Can Company, Milwaukee, Wis. Winding-machine. No. 1,380,105; May 31; v. 286; p. 965.

Hulbert, Judd W., Aberdeen, Md. Railway-crosstie. No. 1,376,769; May 3; v. 286; p. 73.

Hulett, George H., Cleveland, Ohio. Trimming mechanism. No. 1,377,686; May 10; v. 286; p. 305.

Hultman, Ivar, Saltsjöbaden, near Stockholm, Sweden. Chuck. No. 1,379,966; May 31; v. 286; p. 943.

Human, Samuel H., Chicago, Ill. Fluid-compressor. No. 1,377,583; May 10; v. 286; p. 286.

Hunarian, Rafael A., San Francisco, Calif. Toy horse-mobile. No. 1,377,888; May 10; v. 286; p. 346.

Huneryager, George J., Chicago, Ill. Scraper. No. 1,377,484; May 10; v. 286; p. 268.

Hunker, Martin L., Wheeling, W. Va., assignor to Whitaker-Glessner Company. Producing eaves-troughs. No. 1,377,251; May 10; v. 286; p. 223.

Hunker, Martin L., Wheeling, W. Va., assignor to Whitaker-Glessner Company. Eaves-trough-forming machine. No. 1,377,252; May 10; v. 286; p. 223.

Hunt-Crawford Co., The. (See Hunt, Robert T., assignor.)

Hunt, Ludovic E., Springfield, Mo. Engine-indicator. No. 1,376,883; May 3; v. 286; p. 96.

Hunt, Robert T., assignor to the Hunt-Crawford Co., Coshocton, Ohio. Ice-cream container. No. 1,376,770; May 3; v. 286; p. 73.

Hunter, Frank W., Kinzua, Pa. Shut-off for gas-wells. No. 1,377,966; May 10; v. 286; p. 361.

Hunter, Richard B. (See Evans, C. T., and Hunter, assignors.)

Hurd, Earl, New York, N. Y. Process of and apparatus for producing moving-picture films. No. 1,380,298; May 31; v. 286; p. 1001.

Hurley, John F., Denver, Colo. Wax-finish remover. No. 1,380,299; May 31; v. 286; p. 1002.

Huston, Dwight W., Springfield, Ohio. Display-sign. No. 1,377,889; May 10; v. 286; p. 346.

Hutchings, Charles E., assignor to Eastman Kodak Company, Rochester, N. Y. Photographic-plate holder. No. 1,380,209; May 31; v. 286; p. 985.

Hutchinson, David M., *et al.* (See Hachmann, Frederick, assignor.)

Hutchinson, Ely C., Oakland, and E. W. Anderson, assignors to Pelton Water Wheel Company, San Francisco, Calif. Spiral casing. No. 1,380,065; May 31; v. 286; p. 958.

Hutchinson, George, Fall River, Mass. Spool for winding warps and other purposes. No. 1,378,412; May 17; v. 286; p. 497.

Hutchinson, Job, Brooklyn, N. Y. Four-cycle internal-combustion engine. No. 1,378,352; May 17; v. 286; p. 485.

Huther Bros. Saw Mfg. Co. (See Huther, Warren B., assignor.)

Huther, Warren B., assignor to Huther Bros. Saw Mfg. Co., Rochester, N. Y. Inserted-tooth cutter-head and making the same. No. 1,376,438; May 3; v. 286; p. 12.

Hutsell Motor Company, The. (See Hutsell, Thomas A., assignor.)

Hutsell, Thomas A., assignor to The Hutsell Motor Company, Spokane, Wash. Piston construction. No. 1,378,353; May 17; v. 286; p. 485.

Huyett, Daniel D., and A. L. Register, assignors to Vacuum Refrigeration Company, Philadelphia, Pa. System of control for intermittent-absorption refrigerating plants. No. 1,376,884; May 3; v. 286; p. 96.

Hyatt, George H., *et al.* (See Godbey, Walter H., Jr., assignor.)

Hyder, Henry H., Hollywood, Calif. Wireless apparatus. No. 1,379,589; May 24; v. 286; p. 793.

Hydraulic Pressed Steel Company. (See Davidson, Harry O., assignor.)

Hydraulic Pressed Steel Company, The. (See Foster, Emory M., assignor.)

Hydraulic Pressed Steel Company. (See Foster, Henry J., assignor.)

Hydraulic Pressed Steel Company, The. (See Foster, Henry J., assignor.)

Hydronyl Syndicate. (See Linder, S. E., and Lessing, assignors.)

Iacobitti, Giuseppe, Crockett, Calif. Lump-sugar-packing machine. No. 1,377,775; May 10; v. 286; p. 323.

Ideal Electric & Manufacturing Co., The. (See Schou, T., and Behrens, assignors.)

Ideal Electric & Manufacturing Co., The. (See Schou, Theodor, assignor.)

Illinois Tool Works. (See Olson, Carl G., assignor.)

Imhoff, John H., assignor, by mesne assignments, to Johnson Automobile Lock Co., Chicago, Ill. Gear-shift and ignition lock. No. 1,378,033; May 17; v. 286; p. 425.

Imperial Underwear Company, The. (See Campbell, Clinton A., assignor.)

Indahl, Mauritz C., assignor to Lanston Monotype Machine Company, Philadelphia, Pa. Typographic machine. No. 1,378,413; May 17; v. 286; p. 497.

Indahl, Mauritz C., assignor to Lanston Monotype Machine Company, Philadelphia, Pa. Strip-perforator. No. 1,378,414; May 17; v. 286; p. 497.

Independent Stove Company. (See Robinson, William V., assignor.)

Industrial Electric Furnace Company. (See Snyder, Frederick T., assignor.)

Industrial Research Corporation. (See Green, C. F., and Lindsey, assignors.)

Ingersoll-Rand Company. (See Bancel, Paul A., assignor.)

Ingersoll-Rand Company. (See Ditson, Jesse, assignor.)

Ingersoll-Rand Company. (See Hansen, Charles C., assignor.)

Ingersoll-Rand Company. (See Hart, Thomas J., assignor.)

Ingersoll-Rand Company. (See Peters, Arthur E., assignor.)

Ingersoll-Rand Company. (See Smith, William H., assignor.)

Ingersoll-Rand Company. (See Stage, Harold I., assignor.)

Ingersoll-Rand Company. (See Tuttle, Grover G., assignor.)

International Art Publishing Company. (See Bennett, Beatrice M., assignor.)

International Cork Company. (See Marsa, Melchor, assignor.)

International Harvester Company. (See Arnold, Douglass L., assignor.)

International Harvester Company. (See Ford, Ralph L., assignor.)

International Mailing Tube and Wrapper Company. (See Greve, Herman L., assignor.)

International Motor Company. (See Frins, Maximilian C., assignor.)

International Motor Company. (See Lucand, Alexander, assignor.)

International Patent Investment Company, The. (See Brown, George F., assignor.)

International Precipitation Company. (See Moon, Freeman S., assignor.)

International Surgical Instruments Company. (See Soresi, Angelo L., assignor.)

International Time Recording Company of New York, The. (See Bryce, James W., assignor.)

"Invenit," G. m. b. H. (See Fritz, Robert C., assignor.)

Invincible Metal Office Furniture Company. (See Wege, Peter M., assignor.)

Irwin, George H. (See Jensen, C. C., and Irwin.)

Irwin, Herbert G., Floydada, Tex. Insecticide-holder. No. 1,377,077; May 3; v. 286; p. 133.

Isaacs, Albert, New York, N. Y., assignor to Beck Duplicator Company. Spindle for duplicating-machines and the like. No. 1,377,584; May 10; v. 286; p. 286.

Ische, Albert. (See Ische, Arnold and A.)

Ische, Arnold, Norwood, and A. Ische, Hamburg, Minn. Nest-box for hens. No. 1,379,628; May 31; v. 286; p. 876.

Isensee, Otto K., Chino, Calif. Erasing and polishing device. No. 1,379,922; May 31; v. 286; p. 930.

Israel, Isaac, assignor of one-half to Success Cone Co., Inc., New York, N. Y. Pastry-shaping device. No. 1,379,987; May 31; v. 286; p. 943.

Ives, Edward L., Chicago, Ill. Means for protecting blast-furnace parts. No. 1,376,440; May 3; v. 286; p. 12.

Ives, Edward L., assignor to Freyn and Company, Chicago, Ill. Blast-furnace-charging bell. No. 1,376,439; May 3; v. 286; p. 12.

Ives, Frederic E., Philadelphia, Pa. Color photograph or film and producing same. No. 1,376,940; May 3; v. 286; p. 107.

Ives, Harry C., assignor to The Ives Manufacturing Corporation, Bridgeport, Conn. Toy-railway-train stop. No. 1,379,988; May 31; v. 286; p. 943.

Ives Manufacturing Corporation, The. (See Ives, Harry C., assignor.)

Ivory, James W., Philadelphia, Pa. Nut lock or fastener. No. 1,376,624; May 3; v. 286; p. 46.

J & B Manufacturing Company. (See Jacobson, Edward B., assignor.)

Jackson, Charles H., *et al.* (See Willis, Frank H., assignor.)

Jackson, Corwill, Kalamazoo, Mich. Pneumatic drill. No. 1,376,545; May 3; v. 286; p. 31.

Jackson Cushion Spring Company, The. (See Van Hove, Desire H., assignor.)

Jackson, Dean S., Albany, N. Y. Funnel. No. 1,379,569; May 24; v. 286; p. 790.

Jackson, George E., Brooklyn, N. Y., assignor of forty-nine one-hundredths to W. B. Eveans, Montclair, N. J. Cigarette-former. No. 1,379,344; May 24; v. 286; p. 748.

Jackson, Mark. (See West, F. J., Jackson, and Leader.)

Jackson, Maude, *et al.* (See Traphagan, Frank M., assignor.)

Jacobi, Edward N. (See Briggs, S. F., and Jacobi.)

Jacobs, John. (See Kondolf, Mathias R., assignor.)

Jacobsen, Charles H., and C. Breer, Detroit, Mich. Power-transmitting joint. No. 1,378,118; May 17; v. 286; p. 442.

Jacobsen, Emil, New York, N. Y., assignor to Automatic Electric Company, Chicago, Ill. Measured-service telephone system. No. 1,376,814; May 3; v. 286; p. 82.

Jacobson, Edward B., assignor to J & B Manufacturing Company, Pittsfield, Mass. Ignition-timer. No. 1,379,629; May 31; v. 286; p. 876.

Jacobson, Edward B., assignor to J & B Manufacturing Company, Pittsfield, Mass. Ignition-timer. No. 1,379,821; May 31; v. 286; p. 911.

Jacobson, Leo, Chicago, Ill., assignor to G. B. Cooper, Cleveland, Ohio. Apparatus for vulcanizing vehicle-tires. No. 1,377,133; May 3; v. 286; p. 143.

Jager, Frank, Chicago, Ill. Car-ladder. No. 1,376,696; May 3; v. 286; p. 59.

Jager, Frank, Chicago, Ill. Car-door. No. 1,376,697; May 3; v. 286; p. 59.

Jahn, August, Omak, Wash. Grasshopper-catcher. No. 1,378,235; May 17; v. 286; p. 463.

Jahnke, Charles B., Beloit, Wis., assignor to Fairbanks, Morse & Company, Chicago, Ill. Oil-burning torch. No. 1,377,687; May 10; v. 286; p. 305.

James, Amos H., St. Louis, Mo. Trousers-supporting device. No. 1,380,210; May 31; v. 286; p. 985.

James, Charles W., Jr., administrator. (See Phelps, James C.)

James, Henry D., Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company. Controller. No. 1,379,691; May 31; v. 286; p. 887.

James Manufacturing Company. (See Shodron, John G., assignor.)

Janicki, John, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Apparatus for covering cores. No. 1,378,961; May 24; v. 286; p. 675.

Jankievich, Michael, Elmhurst, N. Y. Ground-leveling machine. No. 1,380,106; May 31; v. 286; p. 965.

Janney, William E., Toronto, Ontario, Canada, H. E. Fiscel and J. L. Miller, Pittsburgh, assignors of one-fourth to G. M. Lemmon, Pittsburgh, Pa. Plumbing apparatus. No. 1,377,776; May 10; v. 286; p. 324.

Janzen, Henry C., Jansen, Nebr. Automatic antiskid-chain placer and remover. No. 1,376,771; May 3; v. 286; p. 74.

Jay, William N., Cleveland, Ohio. Lawn-swing. No. 1,376,698; May 3; v. 286; p. 60.

Jayne, John H. (See Miller, H. E., and Jayne.)

Jeep, Louis C., Sioux City, Iowa. Tag-hook. No. 1,376,546; May 3; v. 286; p. 31.

Jefferies, Ebenezer A. W., assignor to Jefferies-Norton Corporation, Worcester, Mass. Refrigerating apparatus. No. 1,379,102; May 24; v. 286; p. 702.

Jefferies-Norton Corporation. (See Jefferies, Ebenezer A. W., assignor.)

Jefferson, Benjamin H., assignor to Lyon & Healy, Chicago, Ill. Pedal device. No. 1,379,570; May 24; v. 286; p. 790.

Jeffrey Manufacturing Company, The. (See Holmes, Morris P., assignor.)

Jeffrey Manufacturing Company, The. (See Levin, Nils D., assignor.)

Jeffrey, Max L. (See Fies, Herbert W., assignor.)

Jellinek, Charles, and D. Stern, New York, N. Y. Chair. No. 1,379,263; May 24; v. 286; p. 732.

Johanson, Pehr, and E. A. Francke, assignors to Norton Company, Worcester, Mass. Shaping device for articles made of ceramic bonded material. No. 1,376,773; May 3; v. 286; p. 74.

Johanson, Reiert, Odda, Hardanger, Norway. Hydraulic transformer. No. 1,377,585; May 10; v. 286; p. 286.

Johantgen, Oliver D., assignor to Victor Adding Machine Co., Chicago, Ill. Rack-bar and bearing for calculating-machines and the like. No. 1,378,119; May 17; v. 286; p. 442.

Johns, Luther, Oak Park, Ill. Child's convertible vehicle. No. 1,379,305; May 24; v. 286; p. 740.

Johns-Manville. (See Hoffman, William A., assignor.)

Johns, Robert A., and F. L. Myers, Mobile, Ala. Combined dispensing and refrigerating apparatus. No. 1,378,792; May 17; v. 286; p. 571.

Johnson, Alvin E., St. Francis, Kans. Tractor-hitch. No. 1,378,793; May 17; v. 286; p. 571.

Johnson, Arthur B., Las Animas, Colo. Rotary engine. No. 1,378,415; May 17; v. 286; p. 498.

Johnson, Augusta S., Philadelphia, Pa. Foldable umbrella. No. 1,378,354; May 17; v. 286; p. 485.

Johnson Automobile Lock Co. (See Imhoff, John H., assignor.)

Johnson Automobile Lock Co. (See Johnson, Colvin L., assignor.)

Johnson, Benjamin F., Cleveland, Ohio. Pipe. No. 1,376,548; May 3; v. 286; p. 32.

Johnson, Bror A. E. (See Ekström, G. C., Johnson, and Orström.)

Johnson, Burton L., Knoxville, Tenn. Display-cabinet. No. 1,379,867; May 31; v. 286; p. 920.

Johnson, Charles A. (See Svendsen, C. L. E., and Johnson.)

Johnson, Charles G., assignor of one-half to N. L. Larsen, Sault Ste. Marie, Mich. Life-saving buoy. No. 1,377,486; May 10; v. 286; p. 269.

Johnson, Charley, Seattle, Wash., assignor of one-half to C. W. Parker, Leavenworth, Kans. Amusement device. No. 1,376,886; May 3; v. 286; p. 97.

Johnson, Chester F., Detroit, Mich. Carbureter. No. 1,378,867; May 24; v. 286; p. 657.

Johnson, Chester F., assignor to General Motors Company, Detroit, Mich. Hydrocarbon-motor. No. 1,377,352; May 10; v. 286; p. 243.

Johnson, Clarence V., Yates Center, Kans. Automobile-windshield attachment. No. 1,376,887; May 3; v. 286; p. 97.

Johnson, Colvin L., assignor to Johnson Automobile Lock Co., Chicago, Ill. Gear-shift-lever lock. (Reissue.) No. 15,105; May 17; v. 286; p. 578.

Johnson, Edward E., St. Paul, Minn. Railway water-column. No. 1,378,236; May 17; v. 286; p. 464.

Johnson, Eldridge R., Merion, Pa., assignor to Victor Talking Machine Company. Talking-machine. No. 1,379,345; May 24; v. 286; p. 748.

Johnson, Frank, Aurora, Ill. Pump. No. 1,378,543; May 17; v. 286; p. 522.

Johnson, George A., Chicago, Ill., assignor to W. H. Miner, Chazy, N. Y. Friction shock-absorbing mechanism. No. 1,378,868; May 24; v. 286; p. 657.

Johnson, George T., and H. W. Stertzbach, assignors to The Buckeye Steel Castings Company, Columbus, Ohio. Truck side frame. No. 1,378,794; May 17; v. 286; p. 571.

Johnson, Henry V., St. Paul, Minn. Safety device for drills. No. 1,377,487; May 10; v. 286; p. 269.

Johnson, James J., Chicago, Ill. Combined lamp-holder and reflector. No. 1,376,941; May 3; v. 286; p. 107.

Johnson, Micajah M. (See Webb, John L., assignor.)

Johnson, Orlando B., French, assignor of one-half to R. M. McCracken, Boise, Idaho. Cow-tail holder. No. 1,380,211; May 31; v. 286; p. 985.

Johnson, Orvey, assignor to The Johnson Specialty Company, Madison, Wis. Piston-ring expander and contractor. No. 1,379,021; May 24; v. 286; p. 687.

Johnson, Peter H., and P. A. Kosecki, Kenosha, Wis. Sash-fastener. No. 1,379,823; May 31; v. 286; p. 912.

Johnson-Randall Co. (See Duquette, William, assignor.)

Johnson, Robert C., Leicester, England. Teapot, coffee-pot, and like vessel. No. 1,380,066; May 31; v. 286; p. 958.

Johnson, Rosamond L., Port Orchard, Wash. Vehicle signaling-crane. No. 1,377,488; May 10; v. 286; p. 269.

Johnson Specialty Company, The. (See Johnson, Orvey, assignor.)

Johnson, Stuart P., Washington, D. C. Recoil mechanism. No. 1,379,989; May 31; v. 286; p. 943.

Johnson, Ulysses E. G., Pittsfield, Mass. Valve-remover. No. 1,378,463; May 17; v. 286; p. 507.

Johnson, Walter H., Boston, assignor to C. I. Campbell, Quincy, Mass. Signaling device. No. 1,378,237; May 17; v. 286; p. 464.

Johnston, Andrew L., jr., Richmond, Va., assignor to P. R. Moses, New York, N. Y. Antiskid tire-chain. No. 1,378,821; May 17; v. 286; p. 576.

Johnston, Frank E. (See Miller, L. P., and Johnston.)
Johnston, Genevieve. (See Johnston, Horace G., assignor.)
Johnston, Gertrude A., Chicago, Ill. Safety appliance for high chairs. No. 1,376,625; May 3; v. 286; p. 47.
Johnston, Horace G., assignor to G. Johnston, Corsicana, Tex. Guide for drive-chains. No. 1,378,795; May 17; v. 286; p. 571.
Johnston, R. D., Jr. (See Legg, Andrew C., assignor.)
Johnston, William G., assignor to T. O'Leary, Philadelphia, Pa. Explosive-engine. No. 1,376,700; May 3; v. 286; p. 60.
Jolly, Benjamin R., deceased, Raleigh, N. C., The Raleigh Savings Bank and Trust Company, executor. Insect-catcher. No. 1,377,201; May 10; v. 286; p. 212.
Jones, Alaska O., Kokomo, Ind. Rotary harrow. No. 1,377,586; May 10; v. 286; p. 286.
Jones, Benjamin H., assignor to Smith & Davis Manufacturing Company, St. Louis, Mo. Bedstead. No. 1,376,626; May 3; v. 286; p. 4.
Jones, Harry, Suffern, N. Y., assignor to The American Brake Shoe and Foundry Company, Wilmington, Del. Railway-tie. No. 1,376,549; May 3; v. 286; p. 32.
Jones, Homer W., Lakewood, Ohio, assignor to National Carbon Company, Inc. Terminal connection. No. 1,376,627; May 3; v. 286; p. 47.
Jones, Hugh S., New York Mills, and A. P. Cullinan, assignors to Utica Knitting Company, Utica, N. Y. Stop-motion device. No. 1,377,587; May 10; v. 286; p. 286.
Jones, Isaiah. (See Jones, Lawrence and I.)
Jones, John G., assignor to Eastman Kodak Company, Rochester, N. Y. Wrapped article. No. 1,377,156; May 3; v. 286; p. 148.
Jones, John T., assignor to T. J. Howells, Pittsburgh, Pa. Producing ferrosilicon. No. 1,379,022; May 24; v. 286; p. 687.
Jones, John T., assignor to T. J. Howells, Pittsburgh, Pa. Metallurgical process. No. 1,379,023; May 24; v. 286; p. 687.
Jones, John T., assignor to T. J. Howells, Pittsburgh, Pa. Reducing iron from the ore. No. 1,379,024; May 24; v. 286; p. 687.
Jones, Lawrence and I., Granger, Utah. Valve. No. 1,379,025; May 24; v. 286; p. 687.
Jones, Louis W., Cleveland, Ohio. Pipe-bending device. No. 1,378,796; May 17; v. 286; p. 571.
Jones, Myron G., Mauricetown, N. J. Culling-table for oysters. No. 1,377,689; May 10; v. 286; p. 306.
Jones, Oscar T., Silver City, Miss. Stalk puller and grinder. No. 1,379,571; May 24; v. 286; p. 790.
Jordan, Andrew P., Winters, Tex. Maize-header. No. 1,378,679; May 17; v. 286; p. 549.
Jordan, Harry H. (See Charlton, Robert W., assignor.)
Jordan, O. F., Company. (See Bressler, Robert E., assignor.)
Jorgensen, Bernhardt, Beverly, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J. Machine for shaping uppers to lasts. No. 1,379,923; May 31; v. 286; p. 930.
Jorgensen, Bernhardt, Beverly, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J. Machine for shaping uppers to lasts. No. 1,379,924; May 31; v. 286; p. 931.
Jorgensen, Ray. (See Smith, A. A., and Jorgensen.)
Jorgenson, George, Fargo, N. D. Ash-pan heater for locomotives. No. 1,379,572; May 24; v. 286; p. 790.
Jost, Heinrich, assignor to E. Rutishauser, Kreuzlingen, Switzerland. Templet. No. 1,379,630; May 31; v. 286; p. 876.
Joy, Vernon A., New York, N. Y. Device for displaying the covering of boxes and other containers. No. 1,380,148; May 31; v. 286; p. 973.
Judd, Charles T., Somerville, assignor to J. Duncan Company, Everett, Mass. Overhead tramway-switch. No. 1,377,134; May 3; v. 286; p. 143.
Juelfs, Albert, McPherson, Kans. Wrecking-bar. No. 1,377,014; May 3; v. 286; p. 121.
Julian, Hubert, Montreal, Quebec, Canada. Airplane safety appliance. No. 1,379,264; May 24; v. 286; p. 732.
Julien, Charles, Jersey City, N. J. Rigging for sailing vessel. No. 1,379,573; May 24; v. 286; p. 790.
Jungbluth, Carl J. (See Hammer, Knott, and Jungbluth.)
Junggren, Oscar, Schenectady, N. Y., assignor to General Electric Company. Elastic-fluid turbine. No. 1,378,464; May 17; v. 286; p. 507.
Jurgielewicz, Leopold, Los Angeles, Calif. Safety-watch-pocket protector. No. 1,380,212; May 13; v. 286; p. 985.
Juroka, John, Cleveland, Ohio. Railway-track construction. No. 1,377,489; May 10; v. 286; p. 269.
Kabacij, George, and A. Bartus, Wyatt, W. Va. Antislipping device. No. 1,378,962; May 24; v. 286; p. 675.
Kaelin, Frederick T. (See Matheson, H. W., and Kaelin.)
Kahl, John M., Heaton, N. D. Automatic-release clevis. No. 1,379,574; May 24; v. 286; p. 791.
Kahl, Roger A., Wallingford, Conn. Collar-button. No. 1,378,238; May 17; v. 286; p. 464.
Kaiser, Ferdinand, St. Paul, Minn. Pencil. No. 1,378,174; May 17; v. 286; p. 452.
Kaiser, Otto. (See Gams, A., and Kaiser.)
Kaisling, William, assignor to Kellogg Switchboard and Supply Company, Chicago, Ill. Circuit-breaker relay. No. 1,378,869; May 24; v. 286; p. 658.
Kalmanowitz, Jacob, Brooklyn, N. Y. Washing-machine. No. 1,376,815; May 3; v. 286; p. 83.
Kalmus, Comstock & Westcott. (See Comstock, Daniel F., assignor.)
Kalmus, Comstock & Wescott. (See Wescott, William B., assignor.)
Kalteyer, Frederick J., Philadelphia, Pa., assignor to Electrostrop Manufacturing Company. Governor. No. 1,379,265; May 24; v. 286; p. 732.
Kamenetzky, Ralph, Brooklyn, N. Y. Umbrella-handle. No. 1,380,213; May 31; v. 286; p. 985.
Kammritz, Arthur E., Hartford, Conn. Oil-can. No. 1,378,239; May 17; v. 286; p. 464.
Kamper, Edward, assignor to The Willys-Overland Company, Toledo, Ohio. Tube-bending machine. No. 1,376,441; May 3; v. 286; p. 12.
Kamrowski, Frank, Stevens Point, Wis. Windshield attachment. No. 1,379,104; May 24; v. 286; p. 702.
Kane, John J. (See Borchard, Robert W., assignor.)
Kansas City Elevator Manufacturing Company. (See Turner, Frederick E., assignor.)
Kapinos, Frank, and G. Chizek, Canby, Minn. Grain-shock loader. No. 1,378,240; May 17; v. 286; p. 464.
Kappel, Charles, Chicago, Ill. Ice-can. No. 1,380,149; May 31; v. 286; p. 974.
Karron, Louis. (See Meltzer, H., and Karron.)
Kaschewski, Frederick, Davenport, Iowa. Machine for cutting fabrics to predetermined lengths. No. 1,377,777; May 10; v. 286; p. 324.

Lamont, John A., assignor to American Steel Foundries, Chicago, Ill. Truck for railway-cars. No. 1,377,705; May 10; v. 286; p. 309.

Lamont, John A., assignor to American Steel Foundries, Chicago, Ill. Truck-bolster. No. 1,377,706; May 10; v. 286; p. 309.

Lamont, John A., assignor to American Steel Foundries, Chicago, Ill. Railway-car truck equalizing arrangement. No. 1,377,707; May 10; v. 286; p. 309.

Lamont, John A., assignor to American Steel Foundries, Chicago, Ill. Six-wheel equalizer-truck. No. 1,377,708; May 10; v. 286; p. 309.

Lamont, John A., assignor to American Steel Foundries, Chicago, Ill. Truck-equalizing arrangement. No. 1,377,709; May 10; v. 286; p. 310.

Lampkin, Moses, St. Louis, Mo. Detachable heel. No. 1,379,452; May 24; v. 286; p. 767.

Lander, Wintworth V., Newton, Mass., assignor to General Indurating Corporation, New York, N. Y. Impregnated material. No. 1,376,553; May 3; v. 286; p. 33.

Landers, Frary & Clark. (See Haines, Robert E., assignor.)

Landers, Frary & Clark. (See Lamb, Joseph F., assignor.)

Landers, Frary & Clark. (See Twigg, Ernest, assignor.)

Landreth, Clarence P., Philadelphia, Pa. Method of and apparatus for treating liquid. No. 1,378,120; May 17; v. 286; p. 442.

Landwirtschaftliche Handelsgesellschaft M. B. H. (See Schmidt, Paul, assignor.)

Lane, Andrew T., assignor to The Pyorr-Laris Company, St. Louis, Mo. Composition of matter. No. 1,377,780; May 10; v. 286; p. 325.

Lane Brothers Company. (See Campbell, George J., assignor.)

Lane, Jacob, Anchorage, Alaska. Automobile-propelled boat. No. 1,377,892; May 10; v. 286; p. 347.

Lane Manufacturing Company. (See Harvey, Leaman S., assignor.)

Lane, William J., Denver, Colo. Steering-wheel lock. No. 1,378,244; May 17; v. 286; p. 465.

Lang, Charles R., Cathcart, assignor to G. & J. Weir, Limited, Glasgow, Scotland. Steam-condensing and feed-water system for steamships. No. 1,377,080; May 3; v. 286; p. 134.

Lang, Frederick H., Columbus, Ohio. Means for extinguishing fires in vessels. No. 1,378,964; May 24; v. 286; p. 676.

Lang, Gustave J. (See Rosenthal, L. W., and Lang.)

Lang, James S., Boston, Mass. Shock-absorber. No. 1,379,191; May 24; v. 286; p. 718.

Lange, William F., Runge, Tex. Animal-trap. No. 1,376,554; May 3; v. 286; p. 33.

Langguth, Joseph O., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Vulcanized joint. No. 1,378,040; May 17; v. 286; p. 427.

Langhard, Johann K., assignor to Fredriksstad Elektrokemiske Fabriker A/S. Fredriksstad, Norway. Apparatus for the electrolysis of solutions of metal salts. No. 1,379,453; May 24; v. 286; p. 768.

Lannert, John A., Cleveland, Ohio. Ignition device. No. 1,377,419; May 10; v. 286; p. 255.

Lanston Monotype Machine Company. (See Chalfant, William E., assignor.)

Lanston Monotype Machine Company. (See Indahl, Mauritz C., assignor.)

Lantieri, Frank and G., Newark, N. J. Hair-waving heater. No. 1,379,026; May 24; v. 286; p. 687.

Lantieri, Frank and G., Newark, N. J. Hair-waving tube. No. 1,379,027; May 24; v. 286; p. 688.

Lantieri, Gabriel. (See Lantieri, Frank and G.)

Lanz, Arthur, Youngstown, Ohio. Yielding coupling. No. 1,376,774; May 3; v. 286; p. 74.

Lapeer Tractor Truck Company. (See Winn, Sidney B., assignor.)

Lapointe, Francis J., Ann Arbor, Mich. Broaching-machine. No. 1,376,708; May 3; v. 286; p. 62.

Lapointe, Francis J., Ann Arbor, Mich. Spline-finishing broach. No. 1,376,709; May 3; v. 286; p. 62.

La Porte, Norbert M., Chicago, Ill., assignor to Sharp & Dohme, Baltimore, Md. Double salt of aluminum and potassium. No. 1,377,081; May 3; v. 286; p. 134.

Lareau, Leo N., Pawtucket, R. I., and O. J. Rainville, South Attleboro, Mass. Bowling-alley resurfacing device. No. 1,378,473; May 17; v. 286; p. 509.

Larkin Co. (See Horning, Charles G., assignor.)

Larkworthy, Frederick W., assignor to The Brown Hoisting Machinery Company, Cleveland, Ohio. Mechanism for steering tractors. No. 1,378,121; May 17; v. 286; p. 442.

La Rock, Richard (See Walker, Leonard, assignor.)

Larsen, Nils L. (See Johnson, Charles G., assignor.)

Larson, John A., Glendale, New York, N. Y. Oil-burner. No. 1,378,689; May 17; v. 286; p. 551.

Larson, John M., Chicago, Ill. Pressure-controlled diaphragm device. No. 1,379,709; May 31; v. 286; p. 890.

Larson, John M., assignor to National Regulator Company, Chicago, Ill. High-pressure standard regulator. No. 1,376,948; May 3; v. 286; p. 109.

Larson, John O., Litchfield, Minn. Attachment for extension-tables. No. 1,378,878; May 24; v. 286; p. 659.

Larson, Julius N., Dexter, Mich. Log-peeler. No. 1,379,768; May 31; v. 286; p. 901.

La Sor, Herbert G., Los Angeles, Calif. Inking-roll truck. No. 1,380,221; May 31; v. 286; p. 987.

Larsson, Thure, assignor to Norton Company, Worcester, Mass. Wheel-trimming machine. No. 1,377,991; May 10; v. 286; p. 365.

Larter & Sons. (See Larter, Warren R., assignor.)

Larter, Warren R., assignor to Larter & Sons, Newark, N. J. Separable cuff-button. No. 1,379,192; May 24; v. 286; p. 719.

Lasker, William W., Brooklyn, assignor to Powers Accounting Machine Company, New York, N. Y. Total-taking means for accounting-machines. No. 1,376,555; May 3; v. 286; p. 33.

Lasker, William W., Brooklyn, assignor to Powers Accounting Machine Company, New York, N. Y. Electrically-controlled sorting-machines. No. 1,376,556; May 3; v. 286; p. 33.

Latham, Frank W., Alexandria, Va. Pipe-stopper. No. 1,377,840; May 10; v. 286; p. 336.

Lathrop, Harry D. (See Clifford, John J., assignor.)
Lathrop, Harry D., Chicago, Ill. Can-washing machine. No. 1,378,245; May 17; v. 286; p. 460.
Lau, Richard. (See Helby, C. G., Burkam, Lindquist, Riggin, Allen, and Lau.)
Lauffet, Charles, Paris, France. Apparatus for hammering piston-rings. No. 1,377,967; May 10; v. 286; p. 361.
Lauren, John W., Dixon, Ill. Wire-drawing machine. No. 1,377,206; May 10; v. 286; p. 213.
Laval, Louis, Kansas City, Mo. Game. No. 1,380,154; May 31; v. 286; p. 975.
Lavalle, Cyril, Webster, Mass. Shuttle-box for looms. No. 1,376,949; May 3; v. 286; p. 109.
Lavallee, Joseph O. W., assignor to Caron Brothers, Montreal, Quebec, Canada. Internal-combustion engine. No. 1,377,356; May 10; v. 286; p. 244.
Law, John, assignor to B. H. Kelly, Portland, Oreg. Direction-signal for automobiles. No. 1,376,710; May 3; v. 286; p. 62.
Law, Thomas B. (See Belknap, William H., assignor.)
Law, William E., assignor of one-half to W. D. Gash, Philadelphia, and one-half to G. M. Stull, Chester, Pa. Draft appliance for tractors. No. 1,377,839; May 10; v. 286; p. 336.
Lawlor, Simeon C., Chicago, Ill. Mop-wringer. No. 1,378,879; May 24; v. 286; p. 660.
Lawrence, Edward E., Jamaica, and K. D. Loose, New York, assignors to Loose-Wiles Biscuit Company, New York, N. Y. Pneumatic mechanism for conveying and stacking food products. No. 1,377,136; May 3; v. 286; p. 144.
Lawrence, Walter F., assignor to Raymond Bag Company, Middletown, Ohio. Shopping-bag. No. 1,379,829; May 31; v. 286; p. 913.
Lawson, Robert H., Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Shoe-nail-reclaiming machine. No. 1,376,557; May 3; v. 286; p. 33.
Layman, Hebron B., assignor to the Layman Pressed Rod Company, Inc., New York, N. Y. Making connecting-rods. No. 1,378,690; May 17; v. 286; p. 551.
Layman Pressed Rod Company, The. (See Layman, Hebron B., assignor.)
Lazear, Leroy C., Chicago, Ill. Steering-wheel. No. 1,377,420; May 10; v. 286; p. 256.
Leader, Harold T. (See West, F. J., Jackson, and Leader.)
Leahy, Herbert V. (See La Febr, F. E., Hitchcock, and Leahy.)
Leake, Richard C., assignor to General Railway Signal Company, Rochester, N. Y. Protective device. No. 1,380,300; May 31; v. 286; p. 1002.
Leakproof Radiator Co. (See Bark, Otto, assignor.)
Leaver, James M., Jr., Oakland, Calif. Automatic bundling and tying machine. (Reissue.) No. 15,111; May 24; v. 286; p. 797.
Le Blanc, Alexis, assignor to The Composite Metal Lath Company, New York, N. Y. Weaving mechanism. No. 1,379,193; May 24; v. 286; p. 719.
Le Blanc, Alexis, assignor to Composite Metal Lath Company, New York, N. Y. Loom. No. 1,379,194; May 24; v. 286; p. 719.
Leblanc, Thomas, West Gardner, Mass. Hub-cap. No. 1,378,691; May 17; v. 286; p. 551.
Ledig, Richard G., assignor to A. Mecky Company, Philadelphia, Pa. Guard for electric heaters. No. 1,377,492; May 10; v. 286; p. 270.
Leduc, Joseph E., Montreal, Quebec, Canada. Sanitary mask. No. 1,377,710; May 10; v. 286; p. 310.
Lee, Albert P., assignor to Lee Loader & Body Company, Chicago, Ill. Convertible trailer. No. 1,376,443; May 3; v. 263; p. 13.
Lee, Albert P., assignor to Lee Loader & Body Company, Chicago, Ill. Monorail railway. No. 1,376,444; May 3; v. 286; p. 13.
Lee, Charles G. (See Wilson, C. H., and Lee.)
Lee, Gerhard M., Aurora, Ill. Wrench. No. 1,377,893; May 10; v. 286; p. 347.
Lee, Henry A., Montevideo, Minn. Sheathing vise. No. 1,377,207; May 10; v. 286; p. 214.
Lee, Hoard, Shreveport, La. Self-serving store. No. 1,378,417; May 17; v. 286; p. 498.
Lee, Joseph W., Chicago, Ill., assignor, by mesne assignments, to American Road Plane, Incorporated, Wilmington, Del. Road-surfacing machine. No. 1,378,880; May 24; v. 286; p. 660.
Lee Loader & Body Company. (See Lee, Albert P., assignor.)
Leeds & Northrup Company. (See Bash, Francis E., assignor.)
Leeds & Northrup Company. (See Keeler, Earl A., assignor.)
Leeds & Northrup Company. (See Smith, Irving B., assignor.)
Leffel, Ancel B., Springfield, Ohio. Display-rack. No. 1,378,692; May 17; v. 286; p. 552.
Legg, Andrew C., assignor to R. D. Johnston, Jr., Birmingham, Ala. Cold-storage structure. No. 1,379,269; May 24; v. 286; p. 733.
Lehmann, Oscar, Salt Lake City, Utah. Road-vehicle signal. No. 1,379,996; May 31; v. 286; p. 944.
Leitch, Meredith, Poughkeepsie, assignor to The De Laval Separator Company, New York, N. Y. Master-pulsator for milling-machines. No. 1,378,881; May 24; v. 286; p. 660.
Le Marr, Moad H., Los Angeles, Calif. Safety-catch. No. 1,379,110; May 24; v. 286; p. 703.
Lemmon, George M. (See Janney, W. E., Fiscel, and Miller, assignors.)
Lendle, August, Forest Hills, assignor to Kuttroff Pickhardt & Co., Inc., New York, N. Y. Precipitating acid colors. No. 1,378,418; May 17; v. 286; p. 498.
Lenholt, John E., assignor of one-half to C. R. Tainter, Guilford, Conn. Coupling-fastener. No. 1,378,693; May 17; v. 286; p. 552.
Lensvelt, Cornelius J., Zurich, Switzerland. Meat-slicing machine. No. 1,379,410; May 24; v. 286; p. 760.
Lent, Alvah F., Newark, N. J. Cap-exploder. No. 1,377,894; May 10; v. 286; p. 347.

Piette, Olivier; Brussells, Belgium, assignor to The Société Franco-Belge De Fours A Coke, Paris, France. Heat-recuperator for air or gas. No. 1,378,130; May 17; v. 286; p. 444.

Piggins, William S., Detroit, Mich. Concrete construction. No. 1,380,324; May 31; v. 286; p. 1006.

Piggly Wiggly Corporation. (See Saunders, Clarence, assignor.)

Pike Manufacturing Company. (See Eaton, Malvern A., assignor.)

Pike, William A., Pittsfield, Mass. Clip for strengthening cardboard boxes or cartons. No. 1,376,636; May 3; v. 286; p. 48.

Pitney, Arthur H., Wilmette, Ill., assignor to Pitney-Bowes Export Corporation, Stamford, Conn. Inking mechanism. No. 1,377,853; May 10; v. 286; p. 339.

Pitney-Bowes Export Corporation. (See Pitney, Arthur H., assignor.)

Pittman, Reinhart W., assignor to Alston Saw & Steel Company, New York, N. Y. Apparatus for refinishing or retouching the teeth of saw-blades. No. 1,378,611; May 17; v. 286; p. 536.

Pittsburgh Plate Glass Company. (See Brown, Christopher assignor.)

Pittsburgh Plate Glass Company. (See Slinghuff, Harry G., assignor.)

Pittsburgh Train Control Company. (See Gray, G. B., and Williamson, assignors.)

Pittsburgh Wire Rope Company. (See Anderson, Albin E., assignor.)

Platto, Frederick, Brewerton, N. Y. Motor-loading machine. No. 1,379,039; May 24; v. 286; p. 690.

Plettner, Otto L., and W. H. Lowe, assignors to The Continental Tractor Company, Continental, Ohio. Tractor-plow. No. 1,380,196; May 17; v. 286; p. 456.

Plymouth Gypsum Co., The. (See Norton, John M., assignor.)

Plymouth Phonograph Parts Co. (See Trotter, George C., assignor.)

Pneumatic Process Flotation Company. (See Towne, R. S., and Flinn, assignors.)

Pneumatic Scale Corporation. (See Robinson, George A., assignor.)

Pneumercator Company. (See Parks, Harry S., assignor.)

Poberejsky, Jacques. (See Malhomme, Maurice R., assignor.)

Poehlmann, Andrew T., Catonsville, Md. Address device. No. 1,376,900; May 3; v. 286; p. 99.

Pollock, John W., Sawtelle, Calif. Concentrator. No. 1,379,417; May 24; v. 286; p. 761.

Pomeroy, Percy W., assignor to The Willys-Overland Company, Toledo, Ohio. Vehicle-body. No. 1,376,460; May 3; v. 286; p. 16.

Ponsonby, Amos A., Scranton, Pa., assignor to Westinghouse Electric & Manufacturing Company. Control system. No. 1,379,693; May 31; v. 286; p. 888.

Pool, Alice L. (See Pool, James C. P., assignor.)

Pool, James C. P., assignor of one-third to A. L. Pool, Brooklyn, N. Y. Method and apparatus for deriving mechanical power from tides and waves. No. 1,377,163; May 3; v. 286; p. 149.

Poole, Clifford O., Cobden, Ill. Tire-nut-turning device. No. 1,377,028; May 3; v. 286; p. 124.

Poole, Clifford O., Cobden, Ill. Wrench. No. 1,378,719; May 17; v. 286; p. 557.

Poole, Robert M., Mount Gambier, South Australia, and H. F. Davis, Brighton, Victoria, Australia. Washing or scouring wool. No. 1,377,790; May 10; v. 286; p. 326.

Popowich, John, Passaic, N. J. Vehicle-signal. No. 1,379,211; May 24; v. 286; p. 722.

Popper, Joseph, Brooklyn, assignor of one-half to Baird-Daniels Co., Inc., New York, and one-half to Mrs. E. H. Popper, Brooklyn, N. Y. Amusement device. No. 1,377,221; May 10; v. 286; p. 206.

Popper, Mrs. Ruby H., *et al.* (See Popper, Joseph, assignor.)

Porter, Harry F., assignor to Pyrolectric Instrument Co., Trenton, N. J. Control apparatus. No. 1,377,274; May 10; v. 286; p. 227.

Porter, Herman P., Jacksonville, Fla. Attachment for window-sashes. No. 1,376,637; May 3; v. 286; p. 49.

Porter, John K. (See Emrick, B. R., and Porter.)

Posa, Emit M., Burleson, Tex. Air-storage-tank liquid-dispensing device. No. 1,377,922; May 10; v. 286; p. 352.

Posa, Emit M., Burleson, Tex. Compressed-air-feed liquid-container. No. 1,377,923; May 10; v. 286; p. 353.

Post, Clifford W., assignor to The Goodyear Tire & Rubber Company, Akron, Ohio. Apparatus for the treatment of articles with heat. No. 1,379,595; May 24; v. 286; p. 795.

Post, Truman W., Providence, R. I., assignor to Willys Corporation, Toledo, Ohio. Headlight. No. 1,376,575; May 3; v. 286; p. 37.

Post, Truman W., Providence, R. I., assignor to Willys Corporation, Toledo, Ohio. Headlight. No. 1,376,576; May 3; v. 286; p. 37.

Potash Extraction Corporation. (See Glaeser, Walter, assignor.)

Potschner, Karl, Dover, Ohio. Commode-seat cover. No. 1,377,791; May 10; v. 286; p. 327.

Potter, Washington M., Freedom, Pa. Lunch kit. No. 1,380,019; May 31; v. 286; p. 949.

Potts, George C., Chicago, Ill. Automobile-turntable. No. 1,378,898; May 24; v. 286; p. 663.

Poulsen, Oscar, *et al.*, executors. (See Krogh, Ferdinand W.)

Pouvalismith Corporation. (See Smith, Grant E., assignor.)

Powell, Allie B., Philadelphia, Pa. Hair-curler. No. 1,376,728; May 3; v. 286; p. 65.

Power Alcohol Limited. (See Le Petit, Charles, assignor.)

Power, Nicholas, Brooklyn, assignor to Nicholas Power Company, New York, N. Y. Film-lubricating device. No. 1,377,727; May 10; v. 286; p. 313.

Power, Nicholas, Brooklyn, assignor to Nicholas Power Company, New York, N. Y. Lamp for projecting apparatus. No. 1,377,728; May 10; v. 286; p. 313.

Powers Accounting Machine Company. (See Lasker, William W., assignor.)

Powers Accounting Machine Company. (See Penney, H. D., and Davidson, assignors.)

Powers, John N., assignor to United States Ordnance Company, Washington, D. C. Demountable rim for automobile-wheels. No. 1,379,418; May 24; v. 286; p. 761.

Pownall, Henry D., Canton, Ohio. Ice-machine compressor. No. 1,379,694; May 31; v. 286; p. 888.

Pragst, Ernest W., Schenectady, N. Y., assignor to General Electric Company. Electrical system. No. 1,378,557; May 17; v. 286; p. 525.

Prassone, Eugenio, and L. Avorio, Rome, Italy. Observation kite-balloon. No. 1,377,924; May 10; v. 286; p. 353.

Pratt, Lewis M., assignor of one-half to R. A. Medlin, Eldorado, Kans. Catch for screen-doors and the like. No. 1,379,040; May 24; v. 286; p. 690.

Pratt, William A., Bayonne, N. J., assignor to The M. W. Kellogg Co. Hydraulic-pipe joint. No. 1,378,054; May 17; v. 286; p. 429.

Precision Metal Workers. (See Grunwald, Albert C., assignor.)

Preiel, Nicholas. (See Wyman, George S., assignor.)

Premier Motor Corporation of America. (See Taylor, John S., assignor.)

Premier Warm Air Heater Company. (See Wood, Harry L., assignor.)

Preo, John L. (See Henne, L., and Preo.)

Press, John. (See Reichmann, F. J., and Press.)
Pressed Steel Manufacturing Company, The. (See Sisson, Vinton E., assignor.)
Prest, Austin H., Los Angeles, Calif. Rocking-chair. No. 1,377,600; May 10; v. 286; p. 289.
Prest-O-Lite Company, The. (See Root, Howard C., assignor.)
Preston, Clarence S., San Diego, Calif. Vehicle-tire. No. 1,377,627; May 10; v. 286; p. 294.
Price, Charles S., Denver, Colo. Shell-fish scraper. No. 1,380,247; May 31; v. 286; p. 991.
Price, Joseph H., Cape Girardeau, Mo. Automobile-lock. No. 1,377,157; May 3; v. 286; p. 148.
Price, Sidney L., London, England. Device for starting internal-combustion engines. No. 1,379,361; May 24; v. 286; p. 751.
Price, William G., Yakima, Wash. Box-making bench. No. 1,378,899; May 24; v. 286; p. 663.
Priest, James V., Los Angeles, Calif. Loose-tread traction-wheel. No. 1,378,131; May 17; v. 286; p. 444.
Priestley, Charles H., Elizabeth, N. J. Electric furnace. No. 1,380,248; May 31; v. 286; p. 992.
Pritz, Eric M., Jackson, Ohio. File. No. 1,379,779; May 31; v. 286; p. 903.
Probst, John P., Marion, Ohio. Filtering. No. 1,378,274; May 17; v. 286; p. 471.
Process Company, The. (See Coast, John W., Jr., assignor.)
Process Engineers. (See De Cew, Judson A., assignor.)
Prochazke, Otto, Detroit, Mich. Illuminated house-number. No. 1,379,780; May 31; v. 286; p. 903.
Prose, Harrison D., Macksville, Kans. Beet-topper. No. 1,376,461; May 3; v. 286; p. 16.
Protective Signal Manufacturing Company, The. (See Neahr, Will C., assignor.)
Protecto Pump Company, The. (See Hatmaker, William T., assignor.)
Prouty, Enoch, Arcadia, Fla. Copy-holder. No. 1,376,612; May 17; v. 286; p. 536.
Pryor, John T. (See Dix, H. S., Pryor, and Coffey.
Publow, Henry L. (See Reed, H. S., and Publow.)
Pulliam, Oswald S., New York, N. Y. Cylinder and piston construction. No. 1,379,041; May 24; v. 286; p. 690.

Rich, Elmer A., Jr., Chicago, Ill., assignor to The American Foundry Equipment Company, New York, N. Y. Sand-blast machine. No. 1,377,993; May 10; v. 286; p. 365.
Richard, Mordecai W. (See Carlson, E., and Richard.)
Richard, Thomas S. (See Parent, James A., assignor.)
Richards, Frank J., Los Angeles, Calif. Carbureter. No. 1,379,127; May 24; v. 286; p. 707.
Richards, Julius H., Springfield, Mass., assignor to Eclipse Machine Company, Elmira Heights, N. Y. Engine-starter. No. 1,379,214; May 24; v. 286; p. 723.
Richards-Wilcox Manufacturing Company. (See Phillips, Ellis J. G., assignor.)
Richardson, Brodie J., and C. S. Barber, Waterbury, Conn. Lift-latch for handbags. No. 1,377,276; May 10; v. 286; p. 227.
Richardson, De Soto E., Riverside, Wash. Case-hardening compound and using same. No. 1,379,722; May 31; v. 286; p. 893.
Richardson, George J., New York, N. Y., assignor to National Sanitary Street System, Incorporated. Combined trash-receptacle and advertising medium. No. 1,380,252; May 31; v. 286; p. 992.
Richardson, Led L. (See Hoskin, William, assignor.)
Richmond, Vincent C., Harrow-on-the-Hill, England. Gas-stopping lining for use in aircraft and medium for fixing same. No. 1,378,804; May 17; v. 286; p. 573.
Richter, George A., assignor to Brown Company, Berlin, N. H. Making calcium bisulfite. No. 1,378,616; May 17; v. 286; p. 537.
Richter, George A., assignor to Brown Company, Berlin, N. H. Making calcium-bisulfite cooking liquor. No. 1,378,617; May 17; v. 286; p. 537.
Riedel, Charles E., assignor to Detroit Automatic Scale Company, Detroit, Mich. Combined computing and counting scale. No. 1,379,215; May 24; v. 286; p. 723.
Riegel, Clarence W., Easton, Pa., assignor to General Chemical Company, New York, N. Y. Carboy-package. No. 1,380,020; May 31; v. 286; p. 949.
Rielly, Joseph A. (See Manny, R. A., and Rielly.)
Riesenfeld, Ernst H., Freiburg, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc. Making wood alcohol from methane. No. 1,379,362; May 24; v. 286; p. 751.
Rieser-Beutter, Anna H., *et al.* (See Fahrni, Otto, assignor.)
Riggin, Fred L. (See Heiby, C. G., Burkam, Lindquist, Riggin, Allen, and Lau.)
Ribn, James M., and W., Louisville, Ky. Continuous-rail crossing. No. 1,378,277; May 17; v. 286; p. 472.
Ribn, William. (See Ribn, James M. and W.)
Riiber, Claus N., assignor to Norsk Alkali A/S, Trondhjem, Norway. Apparatus for the electrolysis of solutions of alkaline chlorids. No. 1,378,829; May 17; v. 286; p. 577.
Riis, Jens. Castlewood, S. D. Receiving-account check. No. 1,378,422; May 17; v. 286; p. 499.
Rilleau, Francis M., San Francisco, Calif. Flying-machine. No. 1,376,584; May 3; v. 286; p. 39.
Ripsch, Charles W., and J. C. Dawley, Dayton, Ohio. Lifting-jack. No. 1,376,831; May 3; v. 286; p. 86.
Risinger, Frank V., Youngstown, Ohio, assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill. Vacuum-feed apparatus. No. 1,377,277; May 10; v. 286; p. 227.
Rischard, Joseph J., Pasadena, Calif. Valve-grinding tool. No. 1,377,440; May 10; v. 286; p. 260.
Rissman, Paul, assignor to Fisher Body Corporation, Detroit, Mich. Window-guide. No. 1,378,558; May 17; v. 286; p. 525.
Ritter, Rrank O., Edgemoor, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Reducing acidity of oils. No. 1,379,045; May 24; v. 286; p. 691.
Roach, Edson A., Borduiac, N. D. Straw-stack former. No. 1,377,365; May 10; v. 286; p. 246.
Roach, William H., assignor of one-half to L. G. Stallings and J. M. Hadley, Lindsay, Calif. Wrench. No. 1,377,930; May 10; v. 286; p. 354.
Robbins, Charles, Lawrenceville, Ill. Gear-housing for meat-crushers. No. 1,376,585; May 3; v. 286; p. 39.
Robbins, Charles F. (See Putnam, F. A., and Robbins.)
Robbins, Charles H., Gleasondale, assignor to C. A. Claflin Company, Boston, Mass. Apparatus for dyeing. No. 1,378,618; May 17; v. 286; p. 537.
Robert Bosch Aktiengesellschaft. (See Honold, Gottlob, assignor.)
Roberts, Arthur K., Quincy, Mass. Spark-plug. No. 1,377,854; May 10; v. 286; p. 339.
Roberts, Arthur, Evanston, assignor to American Coke & Chemical Company, Chicago, Ill. Ammonia-still and the like. No. 1,379,939; May 31; v. 286; p. 934.
Roberts, Charles, assignor to The Calico Printers' Association Limited, Manchester, England. Textile and like printing machine. No. 1,378,278; May 17; v. 286; p. 472.
Roberts, Eugene, and A. H. Gibson, assignors to Sugar Centrifugal Discharger Co., Salt Lake City, Utah. Discharger for centrifugal baskets. No. 1,377,141; May 3; v. 286; p. 145.
Roberts, James L., Schenectady, N. Y., assignor to General Electric Company. Bearing and lubricating same. No. 1,378,559; May 17; v. 286; p. 525.
Robertshaw, George A., Greensburg, Pa. Eccentric adjustment for thermostats. No. 1,376,462; May 3; v. 286; p. 16.
Robertson, George B., Keene, N. H. Shackle. No. 1,378,619; May 17; v. 286; p. 537.
Robertson, William, Chicago, Ill. Conveyer. No. 1,378,901; May 24; v. 286; p. 664.
Robeson, Joseph E., *et al.* (See Noah, Leroy H., assignor.)
Robichon, Georges H., Three Rivers, Quebec, Canada. Diary. No. 1,378,560; May 17; v. 286; p. 525.
Robinson, Albert E., Cincinnati, and H. W. Schatz, Norwood, Ohio. Raising and lowering means in metal-working machinery. No. 1,380,021; May 31; v. 286; p. 949.
Robinson, Arthur S., Dayton, Ohio. Drag-line excavator. No. 1,377,278; May 10; v. 286; p. 228.
Robinson, George A., assignor to Pneumatic Scale Corporation, Limited, Quincy, Mass. Sheet-feeding machines. No. 1,379,928; May 31; v. 286; p. 933.
Robinson, Harry E., and D. L. Ordway, Marlboro, Mass. Article-holder. No. 1,378,979; May 24; v. 286; p. 678.
Robinson, Henry C., Beansville, Ontario, Canada. Shock-absorber for automobiles. No. 1,378,279; May 17; v. 286; p. 472.
Robinson, James. (See Erskine-Murray, J., and Robinson.)

Robinson, Mark A., Toronto, Ontario, Canada. Motor-car fender. No. 1,378,423; May 17; v. 286; p. 499.
Robinson, William V., assignor to Independent Stove Company, Owosso, Mich. Automatic damper-regulator. No. 1,379,781; May 31; v. 286; p. 903.
Roby, David H. (See Dobbins, Timothy C., assignor.)
Rochambeau, Charles E., St. Joseph, Mo. Car-brake-controlling means. No. 1,377,628; May 10; v. 286; p. 294.
Rochlis, Samuel, Philadelphia, Pa. Ash-cart cover. No. 1,379,695; May 31; v. 286; p. 888.
Rockwood, George I., and H. G. Carlson; said Carlson assignor to Rockwood Sprinkler Company of Massachusetts, Worcester, Mass. Apparatus for making nuts. No. 1,378,980; May 24; v. 286; p. 678.
Rockwood Sprinkler Company of Massachusetts. (See Rockwood, G. I., and Carlson, assignors.)
Rodger, James G., Camden, N. J. Germinator. No. 1,380,253; May 31; v. 286; p. 993.
Rodhe, Olof, assignor to Svenska Aktiebolaget Mono, Stockholm, Sweden. Gas-analyzing apparatus. No. 1,380,160; May 31; v. 286; p. 976.
Rodney Hunt Machine Company. (See Harris, Carl C., assignor.)
Roehl, Emil W., Spokane, Wash. Spice-can holder. No. 1,378,902; May 24; v. 286; p. 664.
Roehm, Edward R., Detroit, Mich. Cuff-holder. No. 1,370,288; May 24; v. 286; p. 737.
Roeling, Henry W., E. H. Williams, and J. G. Bauer, New Orleans, La. Automatic coin separating and counting machine. No. 1,378,720; May 17; v. 286; p. 557.
Roever, Mary A. (See Roever, Julius, assignor.)
Roever, Julius, New York, assignor to M. A. Roever, Richmond Hill, N. Y. Spring-bed. No. 1,376,641; May 3; v. 286; p. 49.
Roever, Julius, assignor to M. A. Roever, Richmond Hill, N. Y. Couch-bed. No. 1,376,642; May 3; v. 286; p. 50.
Rogers, Albert, San Diego, Calif. Gasolene measuring and testing device. No. 1,378,280; May 17; v. 286; p. 473.
